A Russian

Folktale

Routledge

The Skoptsy

(the self-
castrated)
were one of
the sects that
broke from

the official Russian Orthodox church in the 18th century. The author explores how these peasants turned knives on themselves to become eunuchs for the kingdom of heaven's sake. *Castration and the Heavenly Kingdom* Springer This book provides a thorough introduction to the basic facts and major theories of human motivation. Throughout the book, the author

addresses the types of questions that often arise, such as "Why are some people more organized than others?" and "Why do people dream?" In his exploration of day-to-day human motivation, Franken provides a topical organization that shows students how biology, learning, and cognition interact with individual differences to produce human behavior. *Appellant's*

Appendix Academic Press These proceedings of the 5th Prouts Neck Meeting on Prostate Cancer, held in October, 1989, highlight the many advances in the understanding of prostatic growth and function at the cellular and molecular levels which have been registered since the first Prouts Neck Meeting in 1985, a meeting which also focused on the then current

concepts and basic approaches to understanding prostate cancer. Intervening Prouts Neck Meetings in 1986, 1987 and 1988 were devoted to treatment, image cytometry and clinical markers. As before, the Prouts Neck tradition of bringing together an international, multidisciplinary group of experts for 3 days to exchange ideas and new data, in the relaxed atmosphere of an old inn on

the scenic Maine coast, proved to be an ideal combination for a highly successful conference. Accordingly, the Organ System Program of the National Cancer Institute plans to use the Prouts Neck model for future conferences on other solid tumors (bladder in 1990 and kidney in 1991) and will return to the prostate in 1992. A new dimension was added to the current

program through the inclusion of a poster session to recognize the research of pre-and postdoctoral investigators. The posters were judged by Drs. Collette Freeman, Frank French, Shutsung Liao, Robert Matusik and Henry Sun. The three winners, in alphabetical order, were John Fabian, Robert Getzenberg and Ming Fong-Lin. The current surge of interest in the Elizabethan poet, dramatist, prose-writer and critic, Thomas Nashe, follows years of neglect or undisguised hostility. Yet, as early allusions testify, Nashe was a name which imposed itself on contemporary culture. Nashe annoyed and even disturbed his contemporaries, but they

certainly paid attention to him because he pioneered new approaches to writing, and indeed to living, and because he was an astute critic. The essays in this volume have been chosen for the skill with which they present diverse approaches to key issues in Nashe. All Nashe's texts are covered, as are his relationships with contemporaries, like Shakespeare. The introduction

analyses different approaches, locating them in the history of Nashe criticism, and suggests areas for future research. It argues that Nashe's importance to Renaissance studies lies in his anomalousness, as he forces us to rethink the Renaissance. He makes the Renaissance unfamiliar again, and pushes criticism out of its comfort zone.

cancers. This book provides a comprehensive and up-to-date account of the physical/technological, biological, and clinical aspects of SBRT. It will serve as a detailed resource for this rapidly developing treatment modality. The organ sites covered include lung, liver, spine, pancreas, prostate, adrenal, head and neck, and female reproductive tract. Retrospective

studies and prospective clinical trials on SBRT for various organ sites from around the world are examined, and toxicities and normal tissue constraints are discussed. This book features unique insights from world-renowned experts in SBRT from North America, Asia, and Europe. It will be necessary reading for radiation oncologists, radiation oncology

residents and fellows, medical physicists, medical physics residents, medical oncologists, surgical oncologists, and cancer scientists.

EHP. John Wiley & Sons
Of the many sects that broke from the official Russian Orthodox church in the eighteenth century, one was universally despised. Its members were peasants from the Russian heartland

skilled in the arts of animal husbandry who turned their knives on themselves to become "eunuchs for the kingdom of heaven's sake." Convinced that salvation came only with the literal excision of the instruments of sin, they were known as Skoptsy (the self-castrated). Their community thrived well into the twentieth century, when it was destroyed in the Stalinist Terror. In a

major feat of historical reconstruction, Laura Engelstein tells the sect's astonishing tale. She describes the horrified reactions to the sect by outsiders, including outraged bureaucrats, physicians, and theologians. More important, she allows the Skoptsy a say in defining the contours of their history and the meaning behind their sacrifice. Her deft handling of their letters

and notebooks lends her book unusual depth and pathos, and she provides a heartbreaking account of willing exile and of religious belief so strong that its adherents accepted terrible pain and the denial of a basic human experience. Although the Skoptsy express joy at their salvation, the words of even the most fervent believers reveal the psychological suffering of life on

society's margins. No foreign tribe or exotic import, the sect drew its members from the larger peasant society where marriage was expected and adulthood began with the wedding night. Set apart by the very act that guaranteed their redemption, these "lambs of God" became adept at concealing their sectarian identity as they interacted with their Orthodox neighbors.

Interaction was necessary, Engelstein explains, since the survival of the Skoptsy depended upon recruitment of new members and on success in agriculture and trade. Realizing that some prejudices have changed little over the centuries, Engelstein cautions that "we must not cast the shadow of our own distress on the story of the Skoptsy. Their physical suffering was something

they willingly embraced." In *Castration and the Heavenly Kingdom*, she has produced a remarkable history that also illuminates the mysteries of the human heart.

The Castration Complex

University of Chicago Press
Castration is a lively history of the meaning, function, and act of castration from its place in the early church to its secular reinvention in the Renaissance

as a spiritualized form of masculinity in its 20th century position at the core of psychoanalysis. HarperCollins Publishers
BACKGROUND : We have recently shown that standard treatments for prostate cancer, specifically hormone therapy (HT) and radiation therapy, induce antigen-specific immune responses in human patients.

However, the contribution of these antigen-specific immune responses to clinical outcomes is not known.
HYPOTHESIS: HT induces tumour-specific antibody and T cell responses that delay or prevent tumour recurrence.
METHODS: We utilized the androgen-dependent Shionogi tumour cell line. Male DD/S mice bearing established Shionogi tumours (~64 mm²) were

castrated to induce tumour regression, similar to HT in human prostate cancer patients. Control mice were not castrated. Mice were monitored for tumour recurrence. Tumour-specific antibody responses were measured by immunoblot, and T cell responses by ELISPOT and immunohistochemistry. Tumour-specific antigens were identified by serological screening of a

<p>cDNA expression library (SEREX). RESULTS: Following castration, 32/33 mice experienced complete tumour regression, while the remaining mouse experienced partial tumour regression. Of the 32 mice that underwent complete regression, 72% (23/32) experienced tumour recurrence 3-70 days post-castration, while the remaining 28% (9/32)</p>	<p>remained tumour-free for the duration of the experiment until they were sacrificed for analysis (64-86 days post-castration). Shionogi tumours became heavily infiltrated by CD3+ T cells between 7-14 days post-castration, after which T cell infiltrates became progressively more sparse. Castration induced antibody responses to one or more tumour</p>	<p>proteins in approximately one third of mice with an average latency of 21 days. The most common antibody response was against poly(A) binding protein, nuclear 1 (PABPN1). Interestingly, 71% (17/24) of mice with recurrent tumours had an antibody response against PABPN1, whereas only 11% (1/9) of mice that remained tumour-free had a PABPN1-</p>
---	--	---

specific antibody response. Put another way, the mean tumour-free interval for those mice that had a PABPN1 antibody response was approximately 25 days compared to approximately 63 days for those mice that did not have a PABPN1 antibody response. However, we found a moderate correlation between the timing of the PABPN1-specific antibody

response and growth rate of the recurrent tumour, such that if a mouse had a PABPN1-specific antibody response that occurred shortly after castration, it was more likely to have a slower growing recurrent tumour. IFN- γ ELISPOT assays revealed that castration also induced a PABPN1-specific T cell response that persisted for the duration of the experiment (up to 92 days post-

castration). Unexpectedly, this T cell response was exceedingl y stronger in recurrent mice versus non-recurrent mice and was accompaniedb y splenomegaly in recurrent mice. Anti-CD3 staining of the recurrent tumours showedthat the CD3+ T cells were confined to the periphery and stroma of the tumours.
CONCLUSIONS : In the androgen-dependent murine Shionogi

carcinoma model, HT induces robust antibody and T cell responses to PABPN1 that are associated with unfavourable outcomes. To determine why those mice that do not have PABPN1-specific antibody and T cell responses have better outcomes, we will further delineate the T cell response with respect to CD4+ versus CD8+ subpopulations. Additionally, we will

investigate the use of immunomodulatory agents to amplify host CD8+ T cell responses and thereby improve the therapeutic effects of HT. *With upwards of 300 illustrations. In 2 vols* BoD - Books on Demand Dave Hitz likes to solve fun problems. He didn't set out to be a Silicon Valley icon, a business visionary, or even a billionaire. But he became all three. It turns out that business is a mosaic of

interesting puzzles like managing risk, developing and reversing strategies, and looking into the future by deconstructing the past. As a founder of NetApp, a data storage firm that began as an idea scribbled on a placemat and now takes in \$4 billion a year, Hitz has seen his company go through every major cycle in business—from the Jack-of-All-Trades mentality of a start-up, through the tumultuous

period of the IPO and the dot-com bust, and finally to a mature enterprise company. NetApp is one of the fastest-growing computer companies ever, and for six years in a row it has been on Fortune magazine's list of Best Companies to Work For. Not bad for a high school dropout who began his business career selling his blood for money and typing the names of diseases onto

index cards. With colorful examples and anecdotes, How to Castrate a Bull is a story for everyone interested in understanding business, the reasons why companies succeed and fail, and how powerful lessons often come from strange and unexpected places. Dave Hitz co-founded NetApp in 1992 with James Lau and Michael Malcolm. He served as a programmer, marketing evangelist,

technical architect, and vice president of engineering. Presently, he is responsible for future strategy and direction for the company. Before his career in Silicon Valley, Dave worked as a cowboy, where he got valuable management experience by herding, branding, and castrating cattle.

Feminism and Psychoanalysis
Arden Shakespeare
This first major study of feminist

theory, which is revised and completely reset, now takes the reader into the twentieth century. Molecular and Cellular Biology of Prostate Cancer Cornell University Press Interdisciplinary research is a rewarding enterprise, but there are inherent challenges, especially in current anthropological study. Anthropologists investigate questions concerning health, disease, and

the life course in past and contemporary societies, necessitating interdisciplinary collaboration. Tackling these 'big picture' questions related to human health-states requires understanding and integrating social, historical, environmental, and biological contexts and uniting qualitative and quantitative data from divergent sources and technologies.

The crucial interplay between new technologies and traditional approaches to anthropology necessitates innovative approaches that promote the emergence of new and alternate views. Beyond the Bones: Engaging with Disparate Datasets fills an emerging niche, providing a forum in which anthropology students and scholars wrestle with the fundamental possibilities and limitations

in uniting multiple lines of evidence. This text demonstrates the importance of a multi-faceted approach to research design and data collection and provides concrete examples of research questions, designs, and results that are produced through the integration of different methods, providing guidance for future researchers and fostering the creation of constructive

discourse. Contributions from various experts in the field highlight lines of evidence as varied as skeletal remains, cemetery reports, hospital records, digital radiographs, ancient DNA, clinical datasets, linguistic models, and nutritional interviews, including discussions of the problems, limitations, and benefits of drawing upon and comparing datasets,

while illuminating the many ways in which anthropologists are using multiple data sources to unravel larger conceptual questions in anthropology. Examines how disparate datasets are combined using case studies from current research. Draws on multiple sub-disciplines of anthropological research to produce a holistic overview that speaks to anthropology as a discipline. Explores

examples drawn from qualitative, quantitative, and mixed methods research to illustrate the breadth of anthropological work.

The Triple Revolution

Emerging:

Social

Problems in Depth

Routledge

This is part two and three in the final chapter of *Humans End* screenplay of the journeys and sagas of the human and social experiments. This is a frantic and frenzied rush

to attempt to save the human experience, driven by maniacal and holistic perspectives, and to attempt to reverse the damaging degeneration of the male Y chromosome and male pineal gland maturation decay due to the neutrino tau destruction on the human body. This screenplay makes penitent narratives of human health, lifestyles, future innovations

and drama, and horror and political possibilities of some solutions, coupled with a total finality of the human experience as we know it.

unsettling

journey into

the disaster-

bound

American food

system, and

an exploration

of possible

solutions,

from leading

food politics commentator and former farmer Tom Philpott. More than a decade after Michael Pollan's game-changing *The Omnivore's Dilemma* transformed the conversation about what we eat, a combination of global diet trends and corporate interests have put American agriculture into a state of "quiet emergency," from dangerous drought in California-- which grows more than 50

percent of the fruits and vegetables we eat--to catastrophic topsoil loss in the "breadbasket" heartland of the United States. Whether or not we take heed, these urgent crises of industrial agriculture will define our future. In *Perilous Bounty*, veteran journalist and former farmer Tom Philpott explores and exposes the small handful of seed and pesticide corporations, investment

funds, and magnates who benefit from the trends that imperil us, with on-the-ground dispatches featuring the scientists documenting the damage and the farmers and activists who are valiantly and inventively pushing back. Resource scarcity looms on the horizon, but rather than pointing us toward an inevitable doomsday, Philpott shows how the entire wayward ship of American

agriculture could be routed away from its path to disaster. He profiles the farmers and communities in the nation's two key growing regions developing resilient, soil-building, water-smart farming practices, and readying for the climate shocks that are already upon us; and he explains how we can help move these methods from the margins to the mainstream.
Engaging with

Disparate Datasets
Xlibris
Corporation
To attempt to study Scripture without studying its law is to deny it. To attempt to understand Western civilization apart from the impact of Biblical law within it and upon it is to seek a fictitious history and to reject twenty centuries and their progress. The Institutes of Biblical Law has as its purpose a reversal of the present trend. it is called

"Institutes" in the older meaning of the that word, i.e., fundamental principles, here of law, because it is intended as a beginning, as an instituting consideration of that law which must govern society, and which shall govern society under God. To understand Biblical law, it is necessary to understand also certain basic characteristics of that law. In it, certain broad premises or principles are

declared. These are declarations of basic law. The Ten Commandments give us such declarations. A second characteristic of Biblical law, is that the major portion of the law is case law, i.e., the illustration of the basic principle in terms of specific cases. These specific cases are often illustrations of the extent of the application of the law; that is, by citing a minimal type of case, the

necessary jurisdictions of the law are revealed. The law, then, asserts principles and cites cases to develop the implications of those principles, with is purpose and direction the restitution of God's order. **JNCI** Springer Science & Business Media This comprehensive reference expounds the current state of hormone therapy and castration resistance of prostate cancer (PCa).

Previously, the incidence of PCa in Asian countries was relatively low, but it has been increasing dramatically in recent years. Although most of the new cases are diagnosed in early stages, a significant proportion of patients receive hormone therapy for metastatic disease or for relapse after local treatment. Thus the situation has gradually changed toward earlier

and longer use of hormone therapy. The malignancy finally forms castration-resistant prostate cancer (CRPC) despite the lack of testicular androgen. With advances in understanding of the molecular basis of hormone dependence and CRPC, many new androgen receptor-targeted agents have emerged. During the last decade, much evidence on

hormone therapy has been accumulated in Japan. Interestingly, some of these findings are different from those reported from Western countries, suggesting ethnic variation in the outcome of hormone therapy. In the chapters of this book, expert authors provide exhaustive interpretations of the evidence recently reported from Japan and provide important Asian

perspectives on hormone therapy for PCa. This work benefits not only Asian urologists but also their Western counterparts and all physicians and medical personnel who are involved in the treatment of PCa.
