Check its synchronization with a known good clock. (this is easy with 1 RPM rotors) - You can also place your thumb and forefinger on a rotor's pinion gear or shaft and apply slight pressure to simulate a load. (like you're holding a pencil). You should not be able to stall out a 1 RPM or 3.6 RPM with light pressure.

#### **Grandfather clock repair help - Clock Repair Service**

To correct a mantle or wall clock that is bonging the hour when the minute hand gets to 6 o'clock instead of 12 o'clock, just count the bong, take off the minute hand and reinstall it on the clock pointing to 12 o'clock, then turn the hour hand to the hour you heard the clock bong and its done.

#### *Clock Repairing Adjusting*

Move the hour hand forward to fix the time the clock strikes hourly if it is not striking on the correct hour. Move the minute hand again only to reset the time, and then move that hand backward. Check to see if the lever on the clock is halfway between two chime melodies if the clock fails to chime or strike.
