Users can dramatically improve the design, performance, and manageability of object-oriented code without altering its interfaces or behavior. "Refactoring" shows users exactly how to spot the best opportunities for refactoring and exactly how to do it, step by step.

International Motor Business Penguin

As the muscle car wars developed in the early 1960s, auto manufacturers scrambled to find catchy marketing campaigns to entice the buying public into their dealerships. General Motors, Ford, and Chrysler, with all their divisions, as well as AMC and Studebaker, inevitably sank billions of dollars into one-upmanship in an effort to vie for the consumer's last dollar. Automotive writer Diego Rosenberg examines the tactics and components used by manufacturers in waging war against one another in the muscle car era. Manufacturers poured millions into racing programs, operating under the principle of "Win on Sunday, Sell on Monday." Cars were given catchy nicknames, such as The GTO Judge, Plymouth Roadrunner, Cobra, and Dodge Super Bee. Entire manufacturer lines were given catchy marketing campaigns, such as Dodge's Scat Pack, AMC's Go Package, and Ford's Total Performance. From racing to commercials to print ads, from dealer showrooms to national auto shows, each manufacturer had its own approach in vying for the buyer's attention, and gimmicks and tactics ranged from comical to dead serious. Selling the American Muscle Car: Marketing Detroit Iron in the 60s and 70s takes you back to an era when options were plentiful and performance was cheap. You will relive or be introduced to some of the cleverest marketing campaigns created during a time when America was changing every day.

Cars & Parts National Academies Press

A look back at 150 (fifty from each decade) of the essential subjects from each of the exciting decades of change ... the 1960s, 1970s, and 1980s! Fifty Favs provides a detailed summary of the leading Pop Culture topics---the people, music, sports, movies, and events of those fabulous decades of Americana that many of us fondly remember. The aviation and telecommunication revolutions have conspired to make distance increasingly irrelevant. An important consequence of this is that US citizens, accustomed to competing with their neighbors for jobs, now must compete with candidates from all around the world. These candidates are numerous, highly motivated, increasingly well educated, and willing to work for a fraction of the compensation traditionally expected by US workers. If the United States is to offset the latter disadvantage and provide its citizens with the opportunity for high-quality jobs, it will require the nation to excel at innovation---that is, to be first to market new products and services based on new knowledge and the ability to apply that knowledge. This capacity to discover, create and market will continue to be heavily dependent on the nation's prowess in science and technology. Indicators of trends in these fields are, at best, highly disconcerting. While many factors warrant urgent attention, the two most critical are these: (1) America must repair its failing K-12 educational system, particularly in mathematics and science, in part by providing more teachers qualified to teach those subjects, and (2) the federal government must markedly increase its investment in basic research, that is, in the creation of new knowledge. Only by providing leading-edge human capital and knowledge capital can America continue to maintain a high standard of living---including providing national security---for its citizens.

You Are What You Drive R. R. Bowker

From 1963 to 1974, muscle cars were the kings of the road---no other American automobiles have ever inspired as much passion as these classic performance cars. Muscle Car Source Book is a one-stop resource for muscle car fans. Heavily illustrated with vivid color photography of all the muscle cars from the classic era (1963-1974) and chock full of data and historical facts, this is a reference book you will not want to put down! All of the manufacturers---Ford, Chevrolet, Pontiac, Buick AMC, Dodge, and Plymouth---are covered, and so are the cars, including the Camaro, Mustang, Charger, GTO, and many more! Statistics: All the performance data available for each car is presented in easily read tables. Specifications: Detailed specifications, including horsepower and torque ratings, curb weight, fuel capacity, stock wheel and tire sizes, and other key technical data unique to each model is given. Production numbers: Production information is broken down across all the performance variants and major features. Options: Major performance options available for each car including engine options, comfort features, gauge packages, and wheel-and-tire options are all outlined.

In 1964, Chrysler offered an optional V-8 with it's popular Dodge Valiant. Banking on the resulting success of this option package, Chrysler went on to release a decade worth of low-priced, high-performance muscle cars based on the "A-body" Valiant, including the Dodge Dart GT and GTS, the Swinger 340, and the Demon, as well as the Plymouth Duster. Today, these cars' phenomenal sales figures translate to a thriving Dart and Duster enthusiast scene. Color photography of restored and factory-original vehicles, along with archival black-and-white images, are accompanied by an authoritative history examining the development of the cars. In addition to model histories for each, there are in-depth discussions of vehicle design and production, driving impressions, accessories and options, popular performance upgrades of the period, and the cars' successful histories at the drag strip.

50 Favs of the '60s '70s '80s Fondo De Cultura Economica USA

This book takes a look at fully automated, autonomous vehicles and discusses many open questions: How can autonomous vehicles be integrated into the current transportation system with diverse users and human drivers? Where do automated vehicles fall under current legal frameworks? What risks are associated with automation and how will society respond to these risks? How will the marketplace react to automated vehicles and what changes may be necessary for companies? Experts from Germany and the United States define key societal, engineering, and mobility issues related to the automation of vehicles. They discuss the decisions programmers of automated vehicles must make to enable vehicles to perceive their environment, interact with other road users, and choose actions that may have ethical consequences. The authors further identify expectations and concerns that will form the basis for individual and societal acceptance of autonomous driving. While the safety benefits of such vehicles are tremendous, the authors demonstrate that these benefits will only be achieved if vehicles have an appropriate safety concept at the heart of their design. Realizing the potential of automated vehicles to reorganize traffic and transform mobility of people and goods requires similar care in the design of vehicles and networks. By covering all of these topics, the book aims to provide a current, comprehensive, and scientifically sound treatment of the emerging field of "autonomous driving".

Selling the American Muscle Car AuthorHouse

The LA-series small-block Chrysler engine is a powerful, efficient, and quick-revving engine that has dutifully powered millions of Chrysler/Dodge/Plymouth cars and trucks from 1964 to 2003. And it's also a power unit for many renowned Mopar muscle cars, including the Charger, Barracuda, Challenger, Dart, and others. The LA designates the small-block as "Lightweight A," which was a huge improvement over the previous A-generation engine. With its compact size, 50-pound weight savings, thin-wall casting, and polyspherical heads, it cranked out a lot of torque and horsepower, which made it ideally suited for the street and a formidable opponent on the track. Although this venerable small-block has delivered impressive performance in stock trim, it can be easily modified to produce much greater power for almost any application. The LA was offered in 273-, 318-, 340- and 360-ci iterations, and a full range of aftermarket products are offered for these engines. Mopar engine expert and author Larry Shepard identifies the best parts and clearly guides you through the specific techniques to extract maximum performance from this platform. In particular, he delves into the heads, cams, and valvetrain products and modifications that will achieve your horsepower goals. In addition, he provides in-depth build-up instruction for other essential components: blocks, cranks, pistons, rods, ignition systems, intakes, carburetors, and exhaust. If you own an LA small-block-powered Mopar car or truck, this invaluable guidance and instruction will allow you to optimize performance and maintain reliability. Whether you're building an engine for street, street/strip, or racing, this vital information saves you save time, money, and delivers results. Add this to your Mopar library today!
