Introductory guide to human population genetics and microevolutionary theory Providing an introduction to mathematical population genetics, Human Population Genetics gives basic background on the mechanisms of human microevolution. This text combines mathematics, biology, and anthropology and is best suited for advanced undergraduate and graduate study. Thorough and accessible, Human Population Genetics presents concepts and methods of population genetics specific to human population study, utilizing uncomplicated mathematics like high school algebra and basic concepts of probability to explain theories central to the field. By describing changes in the frequency of genetic variants from one generation to the next, this book hones in on the mathematical basis of evolutionary theory. Human Population Genetics includes: Helpful formulae for learning ease Graphs and analogies that make basic points and relate the evolutionary process to mathematical ideas Glossary terms marked in boldface within the book the first time they appear In-text citations that act as reference points for further research Exemplary case studies Topics such as Hardy-Weinberg equilibrium, inbreeding, mutation, genetic drift, natural selection, and gene flow Human Population Genetics solidifies knowledge learned in introductory biological anthropology or biology courses and makes it applicable to genetic study. NOTE: errata for the first edition can be found at the author's website: <http://employees.oneonta.edu/relethjh/HPG/errata.pdf>

Drawing upon philosophy and social theory, Social Theory of International Politics develops a theory of the international system as a social construction. Alexander Wendt clarifies the central claims of the constructivist approach, presenting a structural and idealist worldview which contrasts with the individualism and materialism which underpins much mainstream international relations theory. He builds a cultural theory of international politics, which takes whether states view each other as enemies, rivals or friends as a fundamental determinant. Wendt characterises these roles as 'cultures of anarchy', described as Hobbesian, Lockean and Kantian respectively. These cultures are shared ideas which help shape state interests and capabilities, and generate tendencies in the international system. The book describes four factors which can drive structural change from one culture to another - interdependence, common fate, homogenization, and self-restraint - and examines the effects of capitalism and democracy in the emergence of a Kantian culture in the West.

**Evaluation and Action Research** Elsevier

This book contains a general introduction to the education of academically able students. It provides a solid background of basic knowledge and a survey of research and theory for educational theorists, student teachers, practising teachers, administrators and planners. It offers insights into relevant practical problems as well as guidelines for classroom practice. The significance of this material is outlined for the various levels of the educational system from the individual classroom to the

regional planning level. The book is not, however, designed to offer set answers and pat solutions, but to provide rationale for the creative work of teachers and administrators.

Lucien Febvre's magisterial study of sixteenth century religious and intellectual history, published in 1942, is at long last available in English, in a translation that does it full justice. The book is a modern classic. Febvre, founder with Marc Bloch of the journal *Annales*, was one of France's leading historians, a scholar whose field of expertise was the sixteenth century. This book, written late in his career, is regarded as his masterpiece. Despite the subtitle, it is not primarily a study of Rabelais; it is a study of the mental life, the mentalit<sup>é</sup>, of a whole age. Febvre worked on the book for ten years. His purpose at first was polemical: he set out to demolish the notion that Rabelais was a covert atheist, a freethinker ahead of his time. To expose the anachronism of that view, he proceeded to a close examination of the ideas, information, beliefs, and values of Rabelais and his contemporaries. He combed archives and local records, compendia of popular lore, the work of writers from Luther and Erasmus to Ronsard, the verses of obscure neo-Latin poets. Everything was grist for his mill: books about comets, medical texts, philological treatises, even music and architecture. The result is a work of extraordinary richness of texture, enlivened by a wealth of concrete details--a compelling intellectual portrait of the period by a historian of rare insight, great intelligence, and

vast learning. Febvre wrote with Gallic flair. His style is informal, often witty, at times combative, and colorful almost to a fault. His idiosyncrasies of syntax and vocabulary have defeated many who have tried to read, let alone translate, the French text. Beatrice Gottlieb has succeeded in rendering his prose accurately and readably, conveying a sense of Febvre's strong, often argumentative personality as well as his brilliantly intuitive feeling for Renaissance France.

2015 marks the beginning of the UN Decade of Sustainable Development. Sustainable development involves the incorporation of ecological principles in technology development and dissemination. It is in this context that the present book by Ms Megha Aggarwal is a timely contribution. The book covers a wide range of information dealing with agriculture, energy, engineering, medicine, architecture, finance, and environmental management. It should help the young students to become the architects of a sustainable future for our country. I hope the book will be read and used widely. □ MS SWAMINATHAN Father of the Indian Green Revolution As India gradually moves towards a □green□ economy, new avenues of employment are opening up for today□s youth. For students thinking about future course and career options, this one-of-its-kind handbook offers a rich body of information required to turn a green interest into a future opportunity. From environmental engineering, environmental science, and environmental law to agriculture, climate science,

and zoology □ it profiles a range of undergraduate and postgraduate courses, and the broad spectrum of careers they lead to. Peppered with anecdotal accounts from well-known professionals and a handy listing of useful resources, *The Green Guide to Environmental Courses and Careers* is a must-have for any student keen on harnessing a green passion. The book is a timely contribution.... It should help the young students to become the architects of a sustainable future for our country. □

A comparison between Karl Marx and Buddha may be regarded as a joke. There need be no surprise in this. Marx and Buddha are divided by 2381 years. Buddha was born in 563 BC and Karl Marx in 1818 AD Karl Marx is supposed to be the architect of a new ideology-polity a new Economic system. The Buddha on the other hand is believed to be no more than the founder of a religion, which has no relation to politics or economics. Please give us your feedback : [www.facebook.com/syag21](http://www.facebook.com/syag21) Your opinion is very important to us. We appreciate your feedback and will use it to evaluate changes and make improvements in our book.
