From Leonardo da Vinci's fantastic visions, to Richard Branson's plans to offer commercial space travel by 2010, visionaries and entrepreneurs have long dreamed of how we will travel in the future. Future Tech: Innovations in Transportation is a prescient look at how we will be moving forward over the coming decades. Whilst we are not yet travelling to work using jet-powered backpacks, the issue of transport in the future is becoming increasingly important. As roads have become more congested and the environment more fragile, the means of transport at our disposal seem less and less adequate. Future Tech explores what designers and engineers around the globe are developing for the world of tomorrow. Future Tech features prototypes already in the first stages of manufacture alongside more conceptual, speculative designs, as well as a history of mechanised transport and invention through the ages. There are chapters on public transport, road, air and water travel as well as personal mobility. Projects Include: Skyblazer: A flying car designed for use on both highways and skyways Senso Car: An automobile that uses the driver's biometric data to alter its internal ambiance Freedom Ship: A seaborne, travelling, residential community for up to 100,000 passengers Airbus TM A380: The world's largest airliner with the first full-length twindeck Spaceship One: A collaboration between Virgin Galactic and Scaled Composites that aims to offer commercial space travel by the year 2010 Blade Runner: A high-speed train that travels both on rail tracks and roads With further

information on sustainable fuels, gravity, solar and wind power alongside a history of mechanised transport, Future Tech is truly a compelling exploration of how the future is imagined in the present.

### **Applied Science & Technology Index** expert verlag

This report reviews engineering's importance to human, economic, social and cultural development and in addressing the UN Millennium Development Goals. Engineering tends to be viewed as a national issue, but engineering knowledge, companies, conferences and journals, all demonstrate that it is as international as science. The report reviews the role of engineering in development, and covers issues including poverty reduction, sustainable development, climate change mitigation and adaptation. It presents the various fields of engineering around the world and is intended to identify issues and challenges facing engineering, promote better understanding of engineering and its role, and highlight ways of making engineering more attractive to young people, especially women.-- Publisher's description.

**Lemon-Aid New Cars and Trucks 2013** Cengage Learning Canada's automotive "Dr. Phil" says there's never been a better time to buy a new car or truck. For deals on wheels, 2013 will be a "perfect storm." There's never been a better time to buy a new car or truck, thanks to a stronger Canadian dollar, a worldwide recession driving prices downward, and a more competitive Japanese auto industry that's still reeling from a series of natural disasters. In addition to lower prices and more choices, 2013 car buyers will see more generous cash rebates, low financing rates, bargain leases, and free auto maintenance programs. Buy, sell,

or hold? Which cars and trucks are "wallet-friendly" and can easily last 15 years? Which vehicles offer the most features to best accommodate senior drivers? Do ethanol and hybrid fuel-saving claims have more in common with Harry Potter than the Society of Automotive Engineers? Is GM's 2013 Volt electric car destined to become an electric Edsel? These questions and more are answered in this informative guide.

Repair of Concrete Bridges Haynes Publishing

Despite a decline in traditional rail freight markets (especially coal and steel), and loss of market share to other modes, the overall growth in freight in recent years has allowed rail freight to maintain its volume. The Commission has introduced three packages of directives to stimulate further growth in this market (the first should have been implemented in the 15 member states, the second is to be implemented by 2005, and the third is yet to be adopted). This report reviews the background to the packages, and offers a provisional analysis of their effect so far. The quality of service offered to customers of rail freight movement in Europe falls seriously short of standards required in a competitive environment. Liberalisation of the UK market since

1994 has, however, resulted in better performance and a growing market share for rail freight. The Committee has reservations about some parts of the third package of directives, particularly the proposal to require all train drivers to hold an international rail driving licence, and the proposal for compulsory compensation to rail freight customers for poor quality service. The report also examines problems with the Channel Tunnel, the only direct rail link between the UK and mainland Europe.
