To be asked to prepare a second edition of a book is heartening for any author or editor. Apart from the opportunity to make the corrections and amendments which are inevitable in a practical manual there is also the possibility to make additions which enhance its usefulness. Above all a further edition usually means that the book has been found to be accept able to a large number of readers and has fulfilled a need. This is indeed the case with Offshore Medicine, which in its description of the medical aspects of offshore work has provided a unique guide to the occupational health of a new industry. The rapid development of offshore exploration for gas and oil which began in the 1960s created a whole new range of related industries. Most attention was focused on the problems of deep diving in the North Sea because of the great expansion of the diving industry, its technological advances and the high mortality of divers in the early years. Diving, however, is only a fraction of the total endeavour concerned with

the offshore industry. The much larger population of workers offshore who man the rigs and barges, the toolpushers, helicopter pilots, crane drivers, scaffolders and roustabouts, geologists and so on, so sympathetically described by A. Alvarez in his recent book Off shore, A North Sea Journey, and the harsh and difficult conditions in which they often have to work are sometimes forgotten.

The U.S. Department of Defense (DoD) faces short-term and long-term challenges in selecting and recruiting an enlisted force to meet personnel requirements associated with diverse and changing missions. The DoD has established standards for aptitudes/abilities, medical conditions, and physical fitness to be used in selecting recruits who are most likely to succeed in their

jobs and complete the first term of service (generally 36 months). In 1999, the Committee on the Youth Population and Military Recruitment was established by the National Research Council (NRC) in response to a request from the DoD. One focus of the committee's work was to examine trends in the youth population relative to the needs of the military and the standards used to screen applicants to meet these needs. When the committee began its work in 1999, the Army, the Navy, and the Air Force had recently experienced recruiting shortfalls. By the early 2000s, all the Services were meeting their goals; however, in the first half of calendar year 2005, both the Army and the Marine Corps experienced recruiting difficulties and, in some months, shortfalls. When recruiting goals are not being met, scientific guidance is needed to inform policy decisions regarding the advisability of lowering standards and the impact of any change on training time and cost, job performance, attrition, and the health of the force. *Assessing Fitness for Military Enlistment* examines the current physical, medical, and mental health standards for military enlistment in light of (1) trends in the physical condition of the youth population; (2) medical advances for treating certain conditions, as well as knowledge of the typical course of chronic conditions as young people reach adulthood; (3) the role of basic training in physical conditioning; (4) the physical demands and working conditions of various jobs in today's military services; and (5) the measures that are used by the Services to characterize an individual's physical condition. The focus is on the enlistment of 18- to 24-year-olds and their first term of service.

*State vs. Society in Northeast India: History, Politics and the*

*Everyday* looks at a state as an entity that does not operate strictly as a rational, legal and administrative organization. State in the Northeast region is very much shaped by the social, economic and political practices on the ground. Using archival and ethnographic evidences, the book questions notions of region and border as fixed spaces. A state, in the process of governing society, produces itself through formal and informal practices on the ground, and the book argues that Northeast India is a significant site for studying this. It engages with conceptual, theoretical and methodological challenges thrown up by the political experiences of ordinary people in the Northeast. The book discusses everyday legal discourse, official public memory, development discourse, cases of becoming marginalized, resistance and ways of networking with the authorities. The objective is to understand the various ways in which state and society engage with each other; and to look at layers of historical interconnections that inform much of contemporary Northeast politics. The book will especially be of interest to scholars in politics, history, sociology and anthropology.

Liberalization, Privatization and Globalization policy was advocated in India in 1991 under the supervision of P.V. Narasimha Rao, the then Prime Minister of India. As a consequence, the tea plantation industry was largely affected. It has confronted difficult competition because of the simplification of tariff barriers and the removal of the quantity restrictions on imports. The result of these on the share of export of Indian tea has declined, the price has plunged, and the profitability has reduced. To remain competitive in the market, tea-producing companies have been forced to reduce the various costs, especially labour costs. Due to this, tea companies are not in a position to fulfil their responsibilities such as health, safety, welfare, and working conditions to the workers. Besides, improper recruitment of labour, lack of proper training facilities, and even irregularities in payment of wages have been increased significantly. As a result, 1.2 million workers in the tea industry to sustain themselves and their families have been adversely affected. This leads to labour unrest and the industry has become vulnerable. The final impact of all these issues spreads to the

quality of tea and profitability of the industry in India. This book examines the existing human resource management practices in the Indian tea industry. It adopts a simplified yet comprehensive approach to showcase workforce management in the tea industry. This book will be of value to postgraduate students, researchers, HR professionals, and policymakers in the fields of human resource management, business history, and industrial relations.
