CURRENT Medical Diagnosis and Treatment 2021 McGraw Hill Professional Over the past two decades there has been a marked change in global age demographics, with the number of over-60s increasing by 82% and the number of centenarians by 715%. This new-found longevity is testament to the success of recent advances in medicine, but poses significant challenges to multiple areas of health care concerning older patients. Building upon its predecessor's reputation as the definitive resource on the subject, this new edition of the Oxford Textbook of Geriatric Medicine offers a comprehensive and multinational examination of the field. Fully revised to reflect the current state of geriatric medicine, it examines the medical and scientific basis of clinical issues, as well as the ethical, legal, and socio-economic concerns for healthcare policy and systems. Over 170 chapters are broken up into 16 key sections, covering topics ranging from policy and key concepts through to infection, cancer, palliative medicine, and healthy ageing. New material includes focus on the evolving concepts of malnutrition, sarcopenia, frailty, and related geriatric syndromes and integration of geriatric principles from public health, primary and specialized care, and transitional stages from home to emergency, medicine and surgery, rehabilitation, and long term care. The Oxford Textbook of Geriatric Medicine brings together specialists from across the globe to provide every physician involved in the care of older patients with a comprehensive resource on all the clinical problems they are likely to encounter, as well as on related psychological, philosophical, and social issues. Essentials of Clinical Geriatrics, Eighth Edition Springer The 60th anniversary edition of the most popular, relied-upon guide to internal

medicine For 60 years, CURRENT Medical Diagnosis and Treatment—the flagship volume of the renowned Lange medical series—has been delivering the authoritative information students, residents, and clinicians need to build their medical knowledge, expertise, and confidence. Covering the latest clinical developments in all facets of medicine and fully focused on bedside clinical issues, this new edition provides completely the latest guidelines, reference, drug prices, approved drugs, and evidence-based coverage of more than 1,000 diseases and disorders—all formatted to enable you to find the answers you need quickly and effortlessly. This landmark guide covers inpatient and outpatient care, focusing on the diagnostic tools relevant to daily practice, and reviews all primary care topics, including gynecology/obstetrics, dermatology, ophthalmology, geriatrics, preventive medicine, psychiatry, and neurology. Now includes a “year in review” feature highlighting what’s new in CMDT! Includes essentials of diagnosis for most diseases/disorders Hundreds of quick-access drug treatment tables with indexed trade names Diagnostic and treatment algorithms present important information in an at-a-glance style Up-to-date references provide peer-reviewed, evidence-based information Seven bonus chapters available online to all book purchasers, featuring expanded content and annual review of advances in HIV treatment and critical information on emerging viral infections *Textbook of geriatric medicine and gerontology* McGraw Hill Professional Brocklehurst's Textbook of Geriatric Medicine and Gerontology Elsevier *Neurosonology and Neuroimaging of Stroke* Springer Science & Business Media This textbook presents real-world cases and discussions that introduce the various mental health syndromes found in the aging population before delving into the core concepts covered by geriatric psychiatry curricula. The text follows each case study with the vital information

necessary for physicians in training, including key features of each disorder and its presentation, practical guidelines for diagnosis and treatment, clinical pearls, and other devices that are essential to students of geriatric psychiatry. With the latest DSM-5 guidelines and with rich learning tools that include key points, review questions, tables, and illustrations, this text is the only resource that is specifically designed to train both American and Canadian candidates for specialty and subspecialty certification or recertification in geriatric psychiatry. It will also appeal to audiences worldwide as a state-of-the-art resource for credentialing and/or practice guidance. The text meets the needs of the future head on with its straightforward coverage of the most frequently encountered challenges, including neuropsychiatric syndromes, psychopharmacology, eldercare and the law, substance misuse, mental health following a physical condition, medical psychiatry, and palliative care. Written by experts in the field, *Geriatric Psychiatry: A Case-Based Textbook* is the ultimate resource for graduate and undergraduate medical students and certificate candidates providing mental health care for aging adults, including psychiatrists, psychologists, geriatricians, primary care and family practice doctors, neurologists, social workers, nurses, and others. **Oxford Textbook of Geriatric Medicine** Cambridge University Press The purpose of this book is to give providers of all levels a simple and essential source of practical information in treating the elderly trauma and emergency surgery patient. The Introduction instructs practitioners how to evaluate and assess risk including frailty and use this information in Goals of Care discussions to facilitate shared decision making so crucial to this population. The individual chapters consist of best practices and care guidelines from some of the most well-known thought leaders and best trauma centers in the country

across the spectrum from geriatricians to trauma and acute care surgeons and nurses. Each chapter contains easy-to-read algorithms and references that the readers can use and adapt for their own setting. Chapters on Pre-hospital care will help guide EMS organizations and even systems in the right care and triage of the elderly. Each chapter also contains a Nursing Focus section for helpful nursing tips in caring for the elderly with those injuries and problems. These sections make this book a must-have for any center looking to improve its care of the elderly patient or just trying to be sure its care is already the best it can be. A special section on Post Acute Care will introduce the provider to the common issues surrounding particular disposition destinations for the elderly patient. This will facilitate discussions with families, case managers and facilities to help improve time to disposition.

With the world's population getting increasingly older, there has never been a more pressing need for the study of old age and ageing. An Introduction to Gerontology provides a wide-ranging introduction to this important topic. By assuming no prior expert knowledge and avoiding jargon, this book will guide students through all the main subjects in gerontology, covering both traditional areas, such as biological and social ageing, and more contemporary areas, such as technology, the arts and sexuality. An Introduction to Gerontology is written by a team of international authors with multidisciplinary backgrounds who draw evidence from a variety of different perspectives and traditions.

Martin Heidegger is one of the most important as well as one of the most difficult thinkers of the last century. His masterpiece *Being and Time* has been described as the most profound turning point in German philosophy since Hegel. Raymond Tallis, who has been arguing with Heidegger for over thirty years, illuminates his fundamental ideas through an imaginary conversation, which is both relaxed and rigorous, witty and profound. The *Conversation* defines Heidegger's relevance to the philosophical agenda of the present century by illuminating his great contribution to our thinking about what it is to be a human being while identifying the weaknesses in his thought.

The Clinical Neurology of Old Age

Jones & Bartlett Learning

In their later years, Americans of different

racial and ethnic backgrounds are not in equally good--or equally poor--health. There is wide variation, but on average older Whites are healthier than older Blacks and tend to outlive them. But Whites tend to be in poorer health than Hispanics and Asian Americans. This volume documents the differentials and considers possible explanations. Selection processes play a role: selective migration, for instance, or selective survival to advanced ages. Health differentials originate early in life, possibly even before birth, and are affected by events and experiences throughout the life course. Differences in socioeconomic status, risk behavior, social relations, and health care all play a role. Separate chapters consider the contribution of such factors and the biopsychosocial mechanisms that link them to health. This volume provides the empirical evidence for the research agenda provided in the separate report of the Panel on Race, Ethnicity, and Health in Later Life.

From Bedside to Curbside Springer

This book serves as a comprehensive reference for the basic principles of caring for older adults, directly corresponding to the key competencies for medical student and residents. These competencies are covered in 10 sections, each with chapters that target the skills and knowledge necessary for achieving competency. Each of the 45 chapters follow a consistent format for ease of use, beginning with an introduction to the associated competency and concluding with the most salient points for mastery. Chapters also includes brief cases to provide context to the clinical reasoning behind the competency, strengthening the core understanding necessary to physicians of the future. Written by expert educators and clinicians in geriatric medicine, *Geriatric Practice* is key resource for students in geriatric medicine, family and internal medicine, specialties, hospice and nursing home training, and all clinicians studying to work with aging patients.

Textbook of Geriatric Medicine and Gerontology Brocklehurst's Textbook of Geriatric Medicine and Gerontology This concise, introductory handbook discusses the basic principles of medical ethics, and includes practical, realistic guidance on how to evaluate and manage common ethical problems, focusing on the care of elderly patients Typical scenarios faced in clinical practice, such as issues of mental capacity and consent, resuscitation, near death decisions, quality of life, and health care expenditure, are discussed

Advances in Geroscience Springer

Geriatric Rehabilitation addresses the fact that this is an age in which individuals have increasing longevity, better health care, education and expectations of health care which present new, increasing and even radical challenges to health care providers. The care of our older patients in rehabilitation settings demands the broad understanding of the key differences in strategies to care for older adults. The combined skills embraced in rehabilitation and geriatrics are presenting unprecedented opportunities for both fields to make substantive and even ground-breaking improvements in the lives of millions of older adults who entrust their lives to us. Rarely in one's medical career are such opportunities so evident and achievable. *Geriatric Rehabilitation* edited by Dr. K. Rao Poduri, MD. FAAPMR draws on a distinguished group of authors who are the front-line providers of care to the older adults. This book presents the full spectrum of the unique care needs of older patients who need the combined skills of physical medicine and geriatrics. It provides an easily accessible means of acquiring and improving these new skills for all those involved in geriatric care.

Gerontological Nursing:

Competencies for Care Lippincott
Williams & Wilkins

Important Notice: The digital edition of this book is missing some of the images or content found in the physical edition.

Gerontological Nursing: Competencies for Care, Second Edition is a comprehensive and student-accessible text that offers a holistic and inter-disciplinary approach to caring for the elderly. The framework for the text is built around the Core Competencies set forth by the American Association of Colleges of Nursing (AACN) and the John A. Hartford Foundation Institute for Geriatric Nursing. Building upon their knowledge in prior medical surgical courses, this text gives students the skills and theory needed to provide outstanding care for the growing elderly population. It is the first of its kind to have more than 40 contributing authors from many different disciplines. Some of the key features include chapter outlines, learning objectives, discussion questions, personal reflection boxes, and case studies.

Geriatrics at Your Fingertips Springer
Science & Business Media

The most complete, authoritative guide available on the diagnosis and treatment of disorders affecting the elderly -- updated with a new global perspective A Doody's Core Title for 2011! "In addition to serving as a timely, comprehensive, state-of-the-art textbook of geriatric medicine

anchored in science, evidence-based medicine, and patient-centered practice, the book also is intended to meet the learning needs of fellows in geriatric medicine. The authors succeed in modeling a textbook of geriatric medicine on textbooks of internal medicine. 3 Stars."--Doody's Review Service The undisputed leader on the subject of geriatrics, this comprehensive guide combines gerontology principles with clinical geriatrics offering unmatched coverage of this area of medicine. Written by some of the world's most respected geriatricians, *Hazzard's Principles of Geriatric Medicine and Gerontology* presents the most up-to-date, evidence-based medical information available -- in a revamped 2-color design that makes finding the answers to your questions faster and easier than ever. Features: A greater emphasis on evidence-based medicine through the expanded use of Clinical Practice Guidelines and references to systematic reviews and critically appraised topics A new international advisory board of 12 global authorities and an increased number of international contributors for a greater global perspective Important new chapters on the cultural aspects of geriatrics, emergency geriatrics, hospital geriatrics, international geriatric care, and rural geriatric care Information integrated with additional online resources Tables, drawings, and clinical algorithms made even more effective by a new two-color design 300 illustrations (including 64 in a full-color insert)

Geriatric Notes Springer Nature Popular with generations of practitioners, Brocklehurst's *Textbook of Geriatric Medicine and Gerontology* has been the definitive reference of choice in the field of geriatric care. The new 7th Edition, by Howard M. Fillit, MD, Kenneth Rockwood, MD, and Kenneth Woodhouse, carries on this tradition with an increased clinical focus and updated coverage to help you meet the unique challenges posed by this growing patient population. Consistent discussions of clinical manifestations, diagnosis, prevention, treatment, and more make reference quick and easy, while over 255 illustrations compliment the text to help you find what you need on a given condition. Examples of the latest imaging studies depict the effects of aging on the brain, and new algorithms further streamline decision making. Emphasizes the clinical relevance of the latest scientific findings to help you easily apply the material to everyday practice. Features consistent discussions of clinical manifestations, diagnosis, prevention,

treatment, and more that make reference quick and easy. Includes over 255 illustrations—including algorithms, photographs, and tables—that compliment the text to help you find what you need on a given condition. Provides summary boxes at the end of each chapter that highlight important points. Features the work of an expert author team, now led by Dr. Howard M. Fillit who provides an American perspective to complement the book's traditional wealth of British expertise. Includes an expanded use of algorithms to streamline decision making. Presents more color images in the section on aging skin, offering a real-life perspective of conditions for enhanced diagnostic accuracy. Includes examples of the latest imaging studies to help you detect and classify changes to the brain during aging. Offers Grade A evidence-based references keyed to the relevant text.

Geriatric Emergency Medicine McGraw Hill Professional

Geriatric anesthesia is a rapidly growing and evolving field and this is the major revision of a classic anesthesia reference. The last few years have seen significant advancements and important new modalities for addressing the needs of an aging population. The editors of this second edition are uniquely situated to put together a text highlighting both essential knowledge and recent breakthroughs of importance to all who work with the elderly. This edition easily maintains the high standard for quality scholarship and useful material set by the first.

Geriatric Anesthesiology Elsevier Health Sciences

Long-term care services include a broad range of services that meet the needs of frail older people and other adults with functional limitations. Long-Term care services provided by paid, regulated providers are a significant component of personal health care spending in the United States. This report presents descriptive results from the first wave of the National Study of Long-Term Care Providers (NSLTCP), which was conducted by the Centers for Disease Control and Preventions National Center for Health Statistics (NCHS). This report provides information on the supply, organizational characteristics, staffing, and services offered by providers of long-term care services; and the demographic, health, and functional composition of users of these services. Service users include residents of nursing homes and residential care communities, patients of home health agencies and hospices, and participants of adult day services centers.

Geriatric Psychiatry Elsevier Health Sciences

The average age of the world's population is increasing at an unprecedented rate and this increase is changing the world. This "Silver tsunami" emphasizes the need to provide advanced training in epidemiology and increase the cadre of experts in the study of aging. This book is designed to summarize unique methodological issues relevant to the study of aging, biomarkers of aging and the biology/physiology of aging and in-depth discussions of the etiology and epidemiology of common geriatric syndromes and diseases.

Contributing authors in the book represent many disciplines, not only epidemiology and clinical geriatrics, but also demography, health services, research, cardiovascular disease, diabetes, psychiatry, neurology, social services, musculoskeletal diseases and cancer. The aim of the book is to provide a broad multidisciplinary background for any student/researcher interested in aging.

The material in the book is organized and comprehensive. It represents the most up-to-date information on the scientific issues in aging research written by academics who specialize in research and training in the broad field of aging. The structure and organization of the book reflects our course series in the *Epidemiology of Aging* starting with the broad issues of demography and methodology, and then addressing specific health conditions and geriatric conditions common to older persons.

Geriatric Rehabilitation Springer

This textbook presents hands-on training material for medical students. The style reflects the need for practice-based teaching with a modern edge in daily clinical routine; accordingly, it also employs online material and pocket cards. Each chapter begins with specific learning objectives, which are cross-referenced with the European curriculum for undergraduate medical education released by the European Union of Medical Specialists (UEMS) together with the European Union Geriatric Medicine Society (EUGMS), as well as the minimum geriatric competences for medical students established by the American Geriatrics Society (AGS). World-renowned European experts in practicing and teaching the interdisciplinary field of Geriatrics contributed to this work, with the aim of offering the new generation of health professionals a global perspective on one of the greatest public health challenges of our time: the management of the steadily increasing number of older, multimorbid, and vulnerable persons. The major

strength of this book – published under the auspices of the EUGMS – is its pragmatic, goal-oriented approach, which makes it suitable for bedside learning and patient-centered medicine; further, all of the chapters are firmly based on the pillars of the ageing process in all of its biological aspects, helping readers understand the pathophysiology of and rationale behind interventions for the main geriatric syndromes and disorders.

Case Files Geriatrics Springer
 diFiore's Atlas of Histology with Functional Correlations explains basic histology concepts through realistic, full-color composite and idealized illustrations of histologic structures. Added to the illustrations are actual photomicrographs of similar structures, a popular trademark

of the atlas. All structures are directly correlated with the most important and essential functional correlations, allowing students to efficiently learn histologic structures and their major functions at the same time. This new edition features: · New chapter on cell biology accompanied by both drawings and representative photomicrographs of the main stages in the cell cycle during mitosis · Contents reorganized into four parts, progressing logically from Methods and Microscopy through Tissues and Systems diFiore's Atlas of Histology is the perfect resource for medical and graduate histology students.
