Various combinations of commercially available technologies could greatly reduce fuel consumption in passenger cars, sport-utility vehicles, minivans, and other light-duty vehicles without compromising vehicle performance or safety. Assessment of Technologies for Improving Light Duty Vehicle Fuel Economy estimates the potential fuel savings and costs to consumers of available technology combinations for three types of engines: spark-ignition gasoline, compression-ignition diesel, and hybrid. According to its estimates, adopting the full combination of improved technologies in medium and large cars and pickup trucks with spark-ignition engines could reduce fuel consumption by 29 percent at an additional cost of \$2,200 to the consumer. Replacing spark-ignition engines with diesel engines and components would yield fuel savings of about 37 percent at an added cost of approximately \$5,900 per vehicle, and replacing spark-ignition engines with hybrid engines and components would reduce fuel consumption by 43 percent at an increase of \$6,000 per vehicle. The book focuses on fuel consumption--the amount of fuel consumed in a given driving distance--because energy savings are directly related to the amount of fuel used. In contrast, fuel economy measures how far a vehicle will travel with a gallon of fuel. Because fuel consumption data indicate money saved on fuel purchases and reductions in carbon dioxide emissions, the book finds that vehicle stickers should provide consumers with fuel consumption data in addition to fuel economy information.

Die Kraftstoffdirekteinspritzung ist beim Dieselmotor längst Stand der Technik und entwickelt sich beim Ottomotor mehr und mehr zum Standard. Ihre Funktion und optimale Anpassung an den Motor ist Voraussetzung zur Erfüllung zukünftiger Anforderungen hinsichtlich Kraftstoffverbrauch, CO₂-, Schadstoff- und Geräuschemission sowie dem Betriebsverhalten. In Zusammenhang mit der intensiven Entwicklung von Downsizing-Konzepten und den zukünftigen Emissionsstandards ergeben sich sowohl für den Otto- als auch für den Dieselmotor neue Herausforderungen an die Gemischbildung und damit an die Einspritztechnik. Beim Ottomotor stehen dabei die Verbrennungsstabilität, die Erreichung der Grenzwerte für die Partikelanzahl und der CO₂-Ausstoß, beim Dieselmotor die Schadstoffemissionsreduzierung im Vordergrund. Die Weiterentwicklung von Brennverfahren erfordert Maßnahmen an der Einspritztechnik selbst, den Einspritzstrategien sowie der Applikation. Die Auslegung der Injektoren ist nicht zuletzt aus Kostengründen Gegenstand von Forschung und Entwicklung. Beim Diesel- und besonders beim Ottomotor wird an der weiteren Steigerung der Einspritzdrücke und Verbesserung des dynamischen Verhaltens bei Mehrfacheinspritzung gearbeitet. Hinzu kommen zusätzliche Herausforderungen bezüglich Qualität und Lebensdauer sowie durch die Anwendung alternativer Kraftstoffe.

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.
