What does it mean to be called as a husband, a wife, a parent, a child? How does the grace of the gospel impact how we carry out our particular calling? How does God's presence influence the struggles that families face? Gene Veith joins forces with his daughter Mary Moerbe to explore these kinds of questions as well as the roles of calling and vocation in family life. Though we have little control over who is in our family (other than choosing a spouse and deciding to have children), God has placed us with specific people for specific reasons. Veith and Moerbe show how our roles are distinct and important to God's plan for our lives—and that when we have a biblical understanding of those roles in our families, we can move away from common dysfunctions and toward forgiveness and healing. Writing with sensitivity and wisdom, Veith and Moerbe address the common problems facing contemporary families: the crosses, the weaknesses, and the uncertainties. They articulate a compelling, biblical paradigm for creating and sustaining loving and forgiving families who maintain hope in the face of cultural pressure. This book is an important resource for all Christians, including pastors, counselors, and those working in family ministry.

Gene Wolfe, whose tetralogy *The Book of the New Sun* was the most acclaimed science fiction work of the 1980s, offered his second collection of short fiction in 1990 to universal acclaim.

This is a hefty volume of over 30 unforgettable stories in a variety of genres-- SF, fantasy, horror, mainstream--many of them offering variations on themes and situations found in folklore and fairy tales, and including two stories, "The Cat" and "The Map," which are set in the universe of his New Sun novels. Wolfe's deconstructions/reconstructions are provocative, multilayered, and resonant. This embarrassment of literary riches is a must for all Gene Wolfe fans, and anyone who loves a good tale beautifully told. World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine "smart factories" in which global systems of manufacturing are coordinated virtually, or implantable mobile phones

made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.

Our world is alive with fascinating new ideas, discoveries, and technologies. But for Christians this can also present problems—especially when the values of postmodernism and secular university life conflict with basic Christian principles. What should Christians do when their beliefs come under attack in the classroom or the public square? *Loving God with All Your Mind* shows us that the answer is neither wholesale rejection of

intellectual life and culture, nor blind acceptance of it. The answer lies in understanding that Jesus is Lord of all of life and that everything in life must be carefully viewed in the light of what Christ's lordship means. Gene Edward Veith unfolds a dazzling critique of the postmodern intellectual world and culture. He affirms the part that is good and true, but he also shows crucial weaknesses that have such a hold over contemporary thought. This book shows Christians how to survive and flourish in a postmodern world while affirming the truth of the Christian faith. *Unweaving the Rainbow* Indiana University Press

It starts with a confession from a priest. His past has reached further back than what many would consider possible. Before he was a priest, he was the pirate Captain Cristoforo, and before he was a pirate, he was just Chris, a boy living in a monastery in Cuba the day after tomorrow. One day Chris realizes that he is not meant for the monastery he has grown up in, and leaves. On the streets of Havana everything looks strange and out-of-date, but Chris is too busy trying to find his next meal and a safe place to sleep to contemplate the city's odd lack of modern conveniences. He finds that this world is a much harder one than the one he remembers; it's a place where people steal, lie, and cheat. Where slaves are sold at auction, and the Spanish, French, and English are all battling for supremacy. When Chris is offered the opportunity to work on a ship in exchange for food and a small bit of money, he takes it, and thus begins his life as a pirate. People die, treasures are found, women are taken captive, and crews rebel. Gene Wolfe is a masterful storyteller, and in *Pirate Freedom*, he uses his customary vision to invite us into the captivating world of pirates, their lives, and their adventures. *Climb the Highest Mountain* Crossway

When you understand it properly, the doctrine of vocation—"doing everything for God's glory"—is not a platitude or an outdated notion. This principle that we vaguely apply to our lives and our work is actually the key to Christian ethics, to influencing our culture for Christ, and to infusing our ordinary, everyday lives with the presence of God. For when we realize that the "mundane" activities that consume most of our time are "God's hiding places," our perspective changes. Culture expert Gene Veith unpacks the biblical, Reformation teaching about the doctrine of vocation, emphasizing not what we should specifically do with our time or what careers we are called to, but what God does in and

through our callings—even within the home. In each task He has given us—in our workplaces and families, our churches and society—God Himself is at work. Veith guides you to discover God's purpose and calling in those seemingly ordinary areas by providing you with a spiritual framework for thinking about such issues and for acting upon them with a changed perspective. **Imagination Redeemed** Anchor

In this New York Times bestseller and longlist nominee for the National Book Award, "our greatest living chronicler of the natural world" (The New York Times), David Quammen explains how recent discoveries in molecular biology affect our understanding of evolution and life's history. In the mid-1970s, scientists began using DNA sequences to reexamine the history of all life. Perhaps the most startling discovery to come out of this new field—the study of life's diversity and relatedness at the molecular level—is horizontal gene transfer (HGT), or the movement of genes across species lines. It turns out that HGT has been widespread and important; we now know that roughly eight percent of the human genome arrived sideways by viral infection—a type of HGT. In *The Tangled Tree*, "the grandest tale in biology....David Quammen presents the science—and the scientists involved—with patience, candor, and flair" (Nature). We learn about the major players, such as Carl Woese, the most important little-known biologist of the twentieth century; Lynn Margulis, the notorious maverick whose wild ideas about "mosaic" creatures proved to be true; and Tsutomu Wantanabe, who discovered that the scourge of antibiotic-resistant bacteria is a direct result of horizontal gene transfer, bringing the deep study of genome histories to bear on a global crisis in public health. "David Quammen proves to be an immensely well-informed guide to a complex story" (The Wall Street Journal). In *The Tangled Tree*, he explains how molecular studies of evolution have brought startling recognitions about the tangled tree of life—including where we humans fit upon it. Thanks to new technologies, we now have the ability to alter even our genetic composition—through sideways insertions, as nature has long been doing. "The Tangled Tree is a source of wonder....Quammen has written a deep and daring intellectual adventure" (The Boston Globe). *The Land Across* Veritas Press

Your imagination matters. Contrary to popular perception, it's not just for kids, artists, or fans of science fiction. Rather, the

imagination is what bridges our thinking and feeling, allowing us to do everything from planning a weekend getaway to remembering what we ate for breakfast. In *Imagination Redeemed*, Gene Veith and Matthew Ristuccia uncover the imagination's importance for Christians, helping us understand who God is, what his Word teaches, and how we should live in the world today. Here is a call to embrace this forgotten part of the mind as a gift from God designed to bolster faith, hope, and love in his people. *God at Work* Tor Books

Few pieces of Christian literature ever address the subject of

division in the body of Christ. Fewer still address the problem of how a Christian should conduct himself in such times and how to survive the aftermath. Every Christian will face division at some time in his life. Many will be caught up in the vortex of a conflagration so great that they very well may be destroyed. Few believers - if any at all - are spiritually prepared for such a devastating ordeal. Gene Edwards raises a new standard of conduct for Christians who find themselves in such a crisis, and points them to a way out . . . unscarred. If you are one of those many Christians who have been profoundly affected by the beautiful story in the widely received *A Tale of Three Kings*, then you will wish to explore the message found in *Climb The Highest Mountain*.

In his latest graphic novel, *Dragon Hoops*, New York Times bestselling author Gene Luen Yang turns the spotlight on his life, his family, and the high school where he teaches. Gene understands stories—comic book stories, in particular. Big action. Bigger thrills. And the hero always wins. But Gene doesn't get sports. As a kid, his friends called him "Stick" and every basketball game he played ended in pain. He lost interest in basketball long ago, but at the high school where he now teaches, it's all anyone can talk about. The men's varsity team, the Dragons, is having a phenomenal season that's been decades in the making. Each victory brings them closer to their ultimate goal: the California State Championships. Once Gene gets to know

these young all-stars, he realizes that their story is just as thrilling as anything he's seen on a comic book page. He knows he has to follow this epic to its end. What he doesn't know yet is that this season is not only going to change the Dragons's lives, but his own life as well.

From the New York Times–bestselling author of *Science in the Soul*. "If any recent writing about science is poetic, it is this" (*The Wall Street Journal*). Did Sir Isaac Newton "unweave the rainbow" by reducing it to its prismatic colors, as John Keats contended? Did he, in other words, diminish beauty? Far from it, says acclaimed scientist Richard Dawkins; Newton's unweaving is the key too much of modern astronomy and to the breathtaking poetry of modern cosmology. Mysteries don't lose their poetry because they are solved: the solution often is more beautiful than the puzzle, uncovering deeper mysteries. With the wit, insight, and spellbinding prose that have made him a bestselling author, Dawkins takes up the most important and compelling topics in modern science, from astronomy and genetics to language and virtual reality, combining them in a landmark statement of the human appetite for wonder. This is the book Dawkins was meant to write: A brilliant assessment of what science is (and isn't), a tribute to science not because it is useful but because it is uplifting. "A love letter to science, an attempt to counter the perception that science is cold and devoid of aesthetic sensibility . . . Rich with metaphor, passionate arguments, wry humor, colorful examples, and unexpected connections, Dawkins' prose can be mesmerizing." —San Francisco Chronicle "Brilliance and wit." —The New Yorker

George Herbert, in his poetic skill and the depth of the spiritual experiences he explores, may be the greatest of all religious poets. This is a study of the specific religious experiences and beliefs that Herbert writes about, both in his poetry and in his prose. As such, it also examines the spiritual landscape of seventeenth-century England, a period, for all of its controversies, still dominated by the understanding of God and the human condition articulated by Martin Luther and systematized by John Calvin. Reformation spirituality, which was different both from medieval Catholicism and late Protestantism, is itself little understood by literary historians, who have tended to look to medieval or Counter-Reformation ideas and practices or to a simplistic distinction between "Anglicans" and "Puritans" as ways of understanding the religion of the time. This study presents Reformation spirituality phenomenologically, from the inside. Just as Reformation spirituality reflects Herbert's poetry, Herbert's poetry illuminates Reformation spirituality, showing the experiential and mystical dimensions of an important religious tradition.
