Like few others, Louis Kahn cultivated the craft of drawing as a means to architecture. His personal design drawings - seen either as a method of discovery or for themselves - are unique in the twentieth century. Over two hundred -

mostly unpublished - drawings by Kahn and his associates are woven together with a lively and informed commentary into an intimate biography of an architectural idea. Unfolding around the iconic project for the Dominican Motherhouse (1965 - 69) the drawings form a narrative which not only reveals the richness and hidden dimensions of this unbuilt masterpiece, but provides compelling insights into Louis Kahn's mature culture of designing. Kahn - long considered an architects' architect" - emerges as a vivid and instructive guide, provoking reflection on questions which continue to remain relevant: on how works

are conceived, on how they might be perceived, on how they become part of human experience. Fascinating not only in their beauty, the drawings open a new and stimulating perspective on one of the past century's great architects. Architecture A to Z Mit Press

The architectural historians Twombly (CUNY, New York) and Menocal (U. Wisconsin, Madison) highlight the social implications of Sullivan's theories of architecture based on nature. The two lengthy essays, which are well illustrated with bandw photographs, are followed by Sullivan's previously unpublished "Study on Inspiration." The remainder of this sumptuous volume (slightly oversize: 8.75x10.5") features a complete catalog of Sullivan's drawings, reproduced in good quality bandw. Louis Kahn was one of the most important architects of the twentieth century, hailed as a master of materials, but also of light. "The plan of a building," he once said, "should be read like a harmony of spaces created in light." Here, in this essay by the legendary art critic Robert Hughes, is Kahn's story.
The Architecture of Paris

This book explores Louis I. Kahn's approach to tradition as revealed in two of his important, unbuilt, projects. Focusing on Kahn's designs for the Dominican Motherhouse of St. Catherine de Ricci, Media, Pennsylvania (1965-1969), and the Hurva Synagogue, Jerusalem, Israel (1967-1974), the book challenges prevailing aesthetic and methodological assessments of Kahn's use of tradition. It reveals how an authentic and critical theoretical-historical and humanistic

study of tradition nourished Kahn's designs, enabling him to mediate historical rituals, ideas and beliefs - and to develop innovative designs rooted deep in human culture while addressing real modern concerns. The book evaluates Kahn's works as a creative recreation and re-interpretation of the past, shedding light on the potential value of the meaningful consideration of tradition in modern times.

Between Silence and Light
Urbana : University of Illinois Press

This book focuses on the complex ways in which architectural practice, theory, patronage, and experience became modern with the rise of a mass public and a reconfigured public sphere between the end of the seventeenth century and the French Revolution. Presenting a fresh theoretical orientation and a large body of new primary research, this book offers a new cultural history of virtually all the major monuments of eighteenth-century Parisian architecture, with detailed analyses of the public debates that erupted around such Parisian monuments as

the east facade of the Louvre, the Place Louis XV [the Place de la Concorde], and the church of Sainte-Genevieve [the Pantheon]. Depicting the passage of architecture into a mediated public culture as a turning point, and interrogating it as a symptom of the distinctly modern configuration of individual, society, and space that emerged during this period, this study will interest readers well beyond the discipline of architectural history. The Architectural Forum Writers & Readers Publishing Louis Kahn's parliament building in Dhaka, Bangladesh, a rarely seen architectural masterpiece that influenced generations of architects and designers, can now be appreciated in this beautifully crafted volume of recent photographs by Grischa Rueschendorf. Great Styles of Interior Architecture, with Their Decoration and Furniture Pomegranate Communications Although Louis Sullivan (1856-1924) has long been associated with the American transcendentalist movement of Emerson, Thoreau, and Whitman, this is the first book to analyze his

transcendentalist thought with the development of his architectural style. It also explores sources of and influences on his thought that have not been considered before. With the help of Narciso G. Menocal's new work, both scholars and students of architectural and art history, as well as American cultural and intellectual history, will gain new insights into Sullivan and his work. "*Beginnings* Routledge A classic first published in 1941, this is an unparalleled work on the shaping of our architectural environment. In his discussions of leading architects and styles, Giedion examines the evolving of new traditions; the strengthening of its plastic tendencies and conditions for further evolution; the urban renewal boom of the fifties; and the development of regionalism by creatively oriented architects. Louis Kahn Xlibris Corporation Today's web sites and intranets are larger, more valuable, and more complex than ever before, and their users are busier and less forgiving. Designers, information architects, and web site

managers are required to juggle vast amounts of information, frequent changes, new technologies, and corporate politics, making some web sites look like a fast-growing but poorly planned city -roads everywhere, but impossible to navigate. A well-planned information architecture has never been as essential as it is now. Information Architecture for the World Wide Web, Second Edition, shows how to use both aesthetics and mechanics to create distinctive, cohesive web sites that work. Most books on web development concentrate either on the graphics or on the technical issues of a site. This book focuses on the framework that holds the two together. By applying the principles outlined in this completely updated classic, you'll build scalable and maintainable web sites that are easier to navigate and more appealing to your users. Using examples and case studies, Information Architecture for the World Wide Web will help you: Develop a strong, cohesive vision for your site that makes it both distinctive and usable; Organize your site's

hierarchy in ways that are meaningful to its users and that minimize the need to re-engineer the site; Create navigation systems that allow users to move through the site without getting lost or frustrated; Accurately label your site's content; Organize your site in a way that supports both searching for specific items and casual browsing; Configure search systems so that users' queries actually retrieve meaningful results; Manage the process of developing an information architecture, from selling the concept to research and conceptual design to planning and production. "The world will be a better place when web designers read this book. It's smart, funny, and artfully distills years of the authors' hard-won experience. *Information Architecture for the World Wide Web* tackles political/organizational challenges as well as content, structure, and user interface. This is not design-lite, but a deep treatment of fundamental issues of information presentation that advances the state of the art. It's light years ahead of the competition." - Bonnie Nardi, Co-author of

A thoughtful selection of the celebrated architect's speeches and writings. *Architecture, Print Culture and the Public Sphere in Eighteenth-Century France* Lars Muller Publishers

In the development of contemporary architecture, no one has had a greater influence than Louis I. Kahn, whose many buildings include the Salk Institute, the Yale Study Center, and the Exeter Library. He is remembered, however, not only as a master builder, but also as one of the most important and creative thinkers of the twentieth century. For Kahn, the study of architecture was the study of human beings, their highest aspirations and most profound truths. He searched for forms and materials to express the subtlety and grandeur of life. In his buildings we see the realization of his vision: luminous surfaces

that evoke a fundamental awe, silent courtyards that speak of the expansiveness and the sanctity of the spirit, monumental columns and graceful arches that embody dignity and strength. Updated with a new preface, this classic work is a major statement on human creativity, showing us Louis Kahn as architect, visionary, and poet.

In 1961, famed architect Louis I. Kahn (1901-1974) received a commission to design a new synagogue. His client was one of the oldest Sephardic Orthodox congregations in the United States: Philadelphia's Mikveh Israel. Due to the loss of financial backing, Kahn's plans were never realized. Nevertheless, the haunting and imaginative schemes for Mikveh Israel remain among Kahn's

most revered designs. Susan G. Solomon uses Kahn's designs for Mikveh Israel as a lens through which to examine the transformation of the American synagogue from 1955 to 1970. She shows how Kahn wrestled with issues that challenged postwar Jewish institutions and evaluates his creative attempts to bridge modernism and Judaism. She argues that Kahn provided a fresh paradigm for synagogues, one that offered innovations in planning, decoration, and

the incorporation of light and nature into building design.

The highly acclaimed history of the architecture of the twentieth century and beyond - now in paperback Jean-Louis Cohen, one of the world's leading architectural historians, serves up a compelling account of the developments that have shaped the world in which

we live today. This highly accessible book begins with the Paris Universal Exposition of 1889, tracing architecture's evolution to the early twenty-first century's globalized architectural culture. Illustrated with hundreds of drawings and photographs as well as portraits, publications, diagrams, film stills, and more, this survey places radical developments in architecture in a larger context, among those of art, technology, urbanism, and critical theory.
