"The purpose of The Pyramids and Palm Trees Test is to assess a person's ability to access detailed semantic representations from words and from pictures. Because it involves only picturable and therefore concrete items, the test does not permit conclusions to be drawn about comprehension of abstract words and concepts." -p. 5 of manual.

All about French Nouns Universal-Publishers

This monograph is a theoretical and empirical investigation into the mechanisms and causes of successful and unsuccessful adult second language acquisition. Couched within a generative framework, the study explores how a learner's first language and the age at which they acquire their second language may contribute to the L2 knowledge that they can ultimately attain. The empirical study focuses on a group of very advanced L2 speakers, and through a series of tests aims to discover what underpins their near mastery of grammatical gender and other grammatical properties. The book explores an account of persistent selective divergence based on the idea that child and adult learners are fundamentally similar, except that in adults the L1 plays the role of a fairly rigid filter of the linguistic input. The impossibility of representing the new target language other than by using the building blocks of the previously established L1 is argued to be the main reason why near but not totally native like language representations are formed and become established in adult L2 learners.

"People nouns" (about 1500) are either optional-sex (un enfant, une enfant) or one-sex oriented (un frère, une soeur). To determine gender, in these two instances only, endings do not matter. Sex matters. Sex determines gender. "Optionals" are listed phonetically in contextual blocks and defined. One-sex nouns are introduced phonetically in context where appropriate throughout. To determine the gender of all other French nouns, noun endings must be considered. Sorting out the mute e-ending nouns is the main gender problem. All of these nouns may be sorted out by means of the "two basic rules" when exceptions are

noted. These two rules determine the gender of 90% of the 33,000 nouns in a comprehensive French dictionary. The remaining 10% are "exceptions" to the "two basic rules" and are listed phonetically in rule order in contextual blocks and defined. Homonyms (about 250), which are derived from all lists, are alphabetically listed in pairs. Homonyms demand proper gender to establish meaning (un tour, a tour, une tour, a tower). Exact cognates (about 7000) are separately listed in alphabetical order. *All About French Nouns: Focus on Gender* confronts the French gender problem and defines it in the most concise manner possible. It provides a permanent source of reference and perhaps the only comprehensive documentary evidence on the subject available today. As such, it serves to confirm or deny previous notions about French gender.

Unlike most monographs on Spanish phonology and morphology that approach these topics from a structuralist or generativist framework, this volume is written from a less traditional point of view. More specifically, it emphasizes quantitative evidence from sources such as usage-based studies, psycholinguistic experiments, corpus data, and computer simulations. Arguments are presented to demonstrate that these kinds of evidence are crucial for establishing theories of language that relate to the psychological mechanisms involved in producing and comprehending speech, in contrast to theories about abstract linguistic structure. A range of topics is covered including morphological parsing, nominalization, stress, syllable structure, diphthongization, gender, morphophonemic alternations, and epenthesis. An appendix is included that serves as a primer on quantitative linguistic research. It discusses how some of the cited experiments were carried out, provides an introduction to statistical analysis, and discusses tools that are available for

conducting quantitative research on the Spanish language. Fossilized Second Language Grammars Research & Education Assoc.

The Acquisition of Grammatical Gender Simon and Schuster This book chronicles the life and frontier career of Don Juan de Oñate, the first colonizer of the old Spanish Borderlands. Born in Zacatecas, Mexico, in the mid-sixteenth century, Don Juan was

the prominent son of an aristocratic silver-mining family. In 1598, in his late forties, Oñate led a formidable expedition of settlers, with wagons and livestock, on an epic march northward to the upper Rio Grande Valley of New Mexico. There he established the first European settlement west of the Mississippi, launching a significant chapter in early American history. In his activities he displayed qualities typical of Spain's sixteenth-century men of action; in his career we find a summation of the motives, aspirations, intentions, strengths, and weaknesses of the Hispanic pioneers who settled the Borderlands.
