Egg is a graphic novel for preschoolers about four eggs, one big surprise, and an unlikely friendship, by Caldecott Medalist and New York Times-bestselling author Kevin Henkes. Egg is not only a perfect Easter gift, but also a classic read-alone and read-aloud that will appeal all year long. This masterful and stylistically original picture book introduces young children to four eggs. One is blue, one is pink, one is yellow, and one is green. Three of the eggs hatch, revealing three baby birds who fly away. But the green egg does not hatch. Why not? When the three birds return to investigate, they're in for a big surprise! What will happen next? With a compelling mix of comic-like panels, wordless pages and spreads, and a short text featuring word repetition, surprise, and suspense, Egg is an ideal book for emergent readers, as well as for sharing in a group. Egg is sure to inspire creativity and storytelling in preschoolers, as they anticipate the page turns and determine their own endings! Kevin Henkes is the bestselling author of Lilly's Purple Plastic Purse, Waiting, and Kitten's First Full Moon, among many other beloved titles.

*A Super Chicken* Macmillan

A bird's egg is a nearly perfect survival capsule--an external womb--and one of natural selection's most wonderful creations. Shortlisted for the Royal Society Insight Investment Science Book Prize 2016. One of Forbes' Best Books About Birds and Birding in 2016. Renowned ornithologist Tim Birkhead opens this gripping story as a female guillemot chick hatches, already carrying her full quota of tiny eggs within her undeveloped ovary. As she grows into adulthood, only a few of her eggs mature, are released into the oviduct, and are fertilized by sperm stored from copulation that took place days or weeks earlier. Within a matter of hours, the fragile yolk is surrounded by albumen and the whole is gradually encased within a turquoise jewel of a shell. Soon the fully formed egg is expelled onto a rocky ledge, where it will be incubated for four weeks before a chick emerges and the life cycle begins again. THE MOST PERFECT THING is about how eggs in general are made, fertilized, developed, and hatched. Birkhead uses birds' eggs as wondrous portals into natural history, enlivened by the stories of naturalists and scientists, including Birkhead and his students, whose discoveries have advanced current scientific knowledge of reproduction.

*Alexander and the Wind-Up Mouse* Owlkids

Crack, crack...animal babies are hatched all over the place. Can you figure out who's who?

Watercolor and collage illustrations depict close-up scenes of an egg or eggs about to hatch. The text hints at what the eggs contain: "Hidden in a rock cave/ Deep beneath the ocean waves/ Their

mother wraps her long arms around/ To keep these eggs safe and sound." The observant young nature lover will find a visual clue of what animal the mother might be. The next spread provides the answer-in this case, it's an octopus. The second spread also provides fascinating facts about the species. The book features a number of species ranging from spiders to penguins to octopuses, and the back matter provides more information about the actual size of various eggs and how they develop.
