Complementary Therapies (CT) refers to the practices, products, or health systems that are outside the realm of conventional medicine, used to treat disease or to promote health and well-being. Defining CT is difficult, because the field is very

broad and constantly changing. The title of this book includes the words body, mind, and soul. The body and the mind (and their reciprocal relations) have been extensively studied scientifically. What about the soul? The book brings some points about this new ground in CT. We hope you find in the present work the sincere desire to collaborate with the dissemination of knowledge. May this book be useful and pleasant to you.

The management of infertility using acupuncture is an expanding area of practice and one which is frequently

rewarding for TCM acupuncture practitioners. Acupuncture for IVF and Assisted Reproduction has been specially prepared to meet the growing demand for information in this area and draws upon 20 years combined experience of the authors together with the latest evidence from both orthodox medicine and TCM. Richly illustrated and clearly written throughout, the book takes the reader through the anatomy and physiology of reproductive medicine (from both an orthodox and TCM perspective) and explains the underlying basis of orthodox medical fertility tests and investigations. The volume then explores the pathology and aetiology of TCM syndromes and shows how common fertility-related conditions, such as endometriosis and male factor infertility, affect Assisted Reproductive Technology (ART) success rates. It explains in great detail how to take a reproductive medical history and successfully diagnose TCM syndromes. Acupuncture for IVF and Assisted Reproduction also provides guidelines on how to regulate the menstrual cycle in preparation for IVF treatment and shows how lifestyle can affect fertility and ART success rates.

Placing a strong emphasis on the practical aspects of patient care, Acupuncture for IVF and Assisted Reproduction contains an abundance of case history templates, algorithmic acupuncture treatment pathways and patient fact sheets and will be ideal for all acupuncture practitioners working in this field. "A must have for the bookshelf of any acupuncturist who is ever called upon to treat fertility issues - if you have room for one book this surely must be it." Reviewed by The Acupuncture Fertility Centre March 2015 "Practitioners of all levels of experience and TCM students should find it compelling reading and an invaluable companion to their learning." Reviewed by Stephen Clarke, Journal of the Australian Traditional Medicine Society May 2015 "This book is extremely well re-searched and referenced." Seven in ten Americans over the age of age of sixty who require medical decisions in the final days of their life lack the capacity to make them. For many of us, our biggest, life-and-death decisions—literally—will therefore be made by someone else. They will decide whether we live or die; between long life and quality of life; whether we receive heroic interventions in our final hours; and whether we die in a hospital or at home.

They will determine whether our wishes are honored and choose between fidelity to our interests and what is best for themselves or others. Yet despite their critical role, we know remarkably little about how our loved ones decide for us. *Speaking for the Dying* tells their story, drawing on daily observations over more than two years in two intensive care units in a diverse urban hospital. From bedsides, hallways, and conference rooms, you will hear, in their own words, how physicians really talk to families and how they respond. You will see how decision makers are selected, the interventions they weigh in on, the information they seek and evaluate, the values and memories they draw on, the criteria they weigh, the outcomes they choose, the conflicts they become embroiled in, and the challenges they face. Observations also provide insight into why some decision makers authorize one aggressive intervention after the next while others do not—even on behalf of patients with similar problems and prospects. And they expose the limited role of advance directives in structuring the process decision makers follow or the outcomes that result.

Research has consistently found that choosing life or death for another is one of the most difficult decisions anyone can face, sometimes haunting families for decades. This book shines a bright light on a role few of us will escape and offers steps that patients and loved ones, health care providers, lawyers, and policymakers could undertake before it is too late.

The provision and use of traditional, complementary and alternative medicine (CAM) has been growing globally over the last 40 years. As CAM develops alongside -

and sometimes integrates with - conventional medicine, this handbook provides the first major overview of its regulation and professionalization from social science and legal perspectives. The Routledge Handbook of Complementary and Alternative Medicine draws on historical and international comparative research to provide a rigorous and thematic examination of the field. It argues that many popular and policy debates are stuck in a polarized and largely asocial discourse, and that interdisciplinary social science perspectives, theorising diversity in the field, provide a much more robust evidence base for policy and practice in the field. Divided into four sections, the handbook covers: analytical frameworks power, professions and health spaces risk and regulation perspectives for the future. This important volume will interest social science and legal scholars researching complementary and alternative medicine, professional identify and health care regulation, as well as historians and health policymakers and regulators.
