"We know we need to improve our traditional school system, both public and private. But how? More homework? Better-qualified teachers? Longer school days or school years? More testing? More funding? No, no, no, no, and no. Montessori Madness! explains why the incremental steps politicians and administrators continue to propose are incremental steps politicians and administrators continue to propose are incremental steps in the wrong direction. The entire system must be turned on its head. This book ask parents to take a look--one thirty-minute observation--at a Montessori school. Your picture of what educations should look like will never be the same"--Back cover.

What could be more appealing than taking a small branch from a tree in your garden and, with a few simple tools, making a wooden spoon to use in your kitchen or give to a friend? Carving this way is a very accessible hobby. The tools are reasonably priced, the raw material is everywhere (yes, it grows on trees!) and there is no need for a dedicated workspace. This book is an introduction to a set of knife and axe cuts that will help you use spoon carving tools effectively and safely. The teaching method is unusual in that it initially focuses on the skills needed to use the tools, rather than what you are making.

Spoon Carving 12-Story Library Steorts (former Chair, U.S. Consumer Product Safety Commission) offers a general guide to safety, as well as a reference tool for understanding consumer

safety concerns. Included are suggestions for "safety-proofing" one's home, discussions of product safety, and information on general areas of concern such as food safety, fire safety, electrical safety, poisons, outdoor safety, sport safety, holiday safety, and safety for the aged. The book also provides a behind-the-scenes account of how various organizations work to ensure the safety of consumers. Many chapters suggest other sources for more information and provide the phone numbers of product-safety organizations.

This book provides a comprehensive introduction into the fundamental physics and basic technical principles of automatic control and drive technology. It pays particular attention to the design and dimensioning of electrical feed drives in automation technology. It helps engineers and technicians to put into practice the theoretical fundamentals of automatic control and drive technology for machines in the tool, glass and ceramics industries as well as in the woodworking and packaging industries. It also deals with the application of robots and other manipulators. The relationships between automatic control and mechanical engineering are described and explained, making the book also particularly useful for students of technical disciplines.

Advancing technology continues to improve the operation and integration of the various systems of the automobile. These changes present ongoing challenges for students aiming to become successful automotive technicians. The fourth Canadian edition of *Automotive Technology: A Systems Approach* was designed and written to continue to prepare students for those challenges. This book concentrates on the need-to-know essentials of the various automotive systems (and how they have changed from the vehicles of yesterday), the

operation of today's vehicles, and what to expect in the near future. New technology is addressed throughout the book in addition to the standard technology that students can expect to see in most vehicles. Each topic is explained in a logical way. Many years of teaching have provided the author team of this text with a good sense of how students read and study technical material, as well as what draws their interest to a topic and keeps it there. This knowledge has been incorporated in the writing and the features of this book.

This new title expands on the widely used concept of combined movements and incorporates both grade IV- manipulative thrust techniques and muscle energy / proprioceptive neuromuscular facilitation techniques. It is the first to include chapters on cervical artery dysfunction (VBI) and upper cervical instability with clinical chapters on the regional management of spinal dysfunction. The first section discusses the underlying theoretical concepts underpinning combined movements theory and manipulation, with the second section offering a comprehensive manual of tests and treatments for each region of the spine. Revision multiple choice tests are at the ends of the theoretical chapters. A chapter on home exercise is included along with a DVD of video clips and clinical reasoning form. The book will provide readers with a comprehensive resource to start using combined movements theory immediately and is a real substitute to attending a course on the method. The book is an update, expansion and development of the *Manual of Combined Movements* published by Brian Edwards. This book is dedicated to addressing the major challenges in fighting COVID-19 using artificial intelligence (AI) and machine learning (ML) – from cost and complexity to availability and accuracy. The aim of this book is to focus on both the design and implementation of AI-based approaches in proposed COVID-19 solutions that are enabled and supported by sensor networks, cloud computing, and 5G and beyond. This book presents research that contributes to the application of ML techniques to the problem of computer communication-assisted diagnosis of COVID-19 and similar diseases. The authors present the latest theoretical developments, real-world applications, and future perspectives on this topic. This book brings together a broad multidisciplinary community, aiming to integrate ideas, theories, models, and techniques from across different disciplines on intelligent solutions/systems, and to inform how cognitive systems in Next Generation Networks (NGN) should be designed, developed, and evaluated while exchanging and processing critical health information. Targeted readers are from varying disciplines who are interested in implementing the smart planet/environments vision via wireless/wired enabling technologies. The M.I.T. Introductory Physics Series is the result of a program of careful study,

planning, and development that began in 1960. The Education Research Center at the Massachusetts Institute of Technology (formerly the Science Teaching Center) was established to study the process of instruction, aids thereto, and the learning process itself, with special reference to science teaching at the university level. Generous support from a number of foundations provided the means for assembling and maintaining an experienced staff to co-operate with members of the Institute's Physics Department in the examination, improvement, and development of physics curriculum materials for students planning

careers in the sciences. After careful analysis of objectives and the problems involved, preliminary versions of textbooks were prepared, tested through classroom use at M.I.T. and other institutions, re-evaluated, rewritten, and tried again. Only then were the final manuscripts undertaken.
