In this book, Richard A. Posner examines how judges go about making difficult decisions. Posner argues that they cannot rely on either logic or science, but must fall back on a grab bag of informal methods of reasoning that owe less than one might think to legal training and experience. -- Adapted from Amazon.com summary.

The range of environments in which people can survive is extensive, yet most of the natural world cannot support human life. The Biology of Human Survival identifies the key determinants of life or death in extreme environments from a physiologist's perspective, integrating modern concepts of stress, tolerance, and adaptation into explanations of life under Nature's most austere conditions. The book examines how individuals survive when faced with extremes of immersion, heat, cold or altitude, emphasizing the body's recognition of stress and the brain's role in optimizing physiological function in order to provide time to escape or to adapt. In illustrating how human biology adapts to extremes, the book also explains how we learn to cope by blending behavior and biology, first by trial and error, then by rigorous scientific observation, and finally by technological innovation. The book describes life-support technology and how it enables humans to enter once unendurable realm, from the depths of the ocean to the upper reaches of the atmosphere and beyond. Finally, it explores the role that advanced technology might play in special environments of the future, such as long journeys into space.

What does it mean for courts and other legal institutions to be culturally sensitive? What are the institutional implications and consequences of such an aspiration? To what extent is legal discourse capable of accommodating multiple cultural narratives without losing its claim to normative specificity? And how are we to understand meetings of law and culture in the context of formal and informal legal processes, when demands are made to accommodate cultural difference? The encounter of law and culture is a polycentric relation, but these questions draw our attention to law and legal institutions as one site of encounter warranting further investigation, to map out the place of culture in the domains of law by relying on the insights of law, anthropology, politics, and philosophy. Culture in the Domains of Law seeks to examine and answer these questions, resulting in a richer outlook on both law and culture.

Since the 1957 Rome Treaty, the European Union has changed dramatically - in terms of its

composition, scope and depth. Originally established by six Western European States, the EU today has 28 Members and covers almost the entire European continent; and while initially confined to establishing a "common market", the EU has come to influence all areas of political, economic and social life. In parallel with this enormous geographic and thematic expansion, the constitutional and legislative principles underpinning the European Union have constantly evolved. This three-volume study aims to provide an authoritative academic treatment of European Union law. Written by leading scholars and practitioners, each chapter offers a comprehensive and critical assessment of the state of the law. Doctrinal in presentation, each volume nonetheless tries to present a broader historical and comparative perspective. Volume I provides an analysis of the constitutional principles governing the European Union. It covers the history of the EU, the constitutional foundations, the institutional framework, legislative and executive governance, judicial protection, and external relations. Volume II explores the structure of the internal market, while Volume III finally analyses the internal and external substantive policies of the EU.

New Private Law Theory opens a new pathway to private law theory through a pluralistic approach.

Such a theory needs a broad and stable foundation, which the authors have built here through a canon of nearly seventy texts of reference. This book brings these different texts from different disciplines into conversation with each other, grouping them around central questions of private law and at the same time integrating them with the legal doctrinal analysis of example cases. This book will be accessible to both experienced and early career scholars working on private law.

Most academics in university law schools would claim to offer a liberal education. Few have thought very much about what a liberal education in law means. Basing itself on a detailed examination of the theory of liberal education, this book looks at what the liberal university law school should be doing in terms of its teaching, research and administration.

"This book discusses developments in scholarship dedicated to reinvigorating the study of the broad domain of private law. This field, which embraces the traditional common law subjects-

property, contracts, and torts-as well as adjacent, more statutory areas, such as intellectual property and commercial law, also includes important subjects that have been neglected in the United States but are beginning to make a comeback. The book particularly focuses on the New Private Law, an approach that aims to bring a new outlook to the study of private law by moving beyond reductively instrumentalist policy evaluation and narrow, rule-by-rule, doctrine-by-doctrine analysis, so as to consider and capture how private law's various features fit and work together, as well as the normative underpinnings of these larger structures. This movement is resuscitating the notion of private law itself in United States and has brought an interdisciplinary perspective to the more traditional, doctrinal approach prevalent in Commonwealth countries. The book embraces a broad range of perspectives to private law-including philosophical, economic, historical, and psychological- yet it offers a unifying theme of seriousness about the structure and content of private law."--

New Critical Legal Thinking articulates the emergence of a stream of critical legal theory which is directly concerned with the relation between law and the political. The early critical legal studies claim that all law is politics is displaced with a different and more nuanced theoretical arsenal. Combining grand theory with a concern for grounded political interventions, the various contributors to this book draw on political theorists and continental philosophers in order to engage with current legal problematics, such as the recent global economic crisis, the Arab spring and the emergence of biopolitics. The contributions instantiate the claim that a new and radical political legal scholarship has come into being: one which critically interrogates and intervenes in the contemporary relationship between law and power.
