Many health care providers are frequently dealing with problems related to the identification and interpretation of medicines and prescriptions of foreign origin. Health authorities, customs and travel agencies also encounter such problems, which are related to the increasing mobility of the European population. Thus the need for a European Drug Index is obvious. The EDI provides extended information for practitioners confronted with the enormous number of drug names available on the European pharmaceutical market. This market is increasing due to the rapidly changing palette of countries and economic restrictions in Europe. The listings have been derived from drug data sources from the increased number of participating countries in this second edition. Each item starts with a trade name, in alphabetical order, followed by (depending on the original source) dosage forms, strength, volume (if applicable), and generic name(s) of the active principle(s) in a random sequence. The item is concluded by the Anatomical Therapeutic Chemical (ATC) classification (when made available by the original source) and a code for the country of origin.

The idea of producing this book of case histories from general family practice was only a twinkle in the editors' eyes until October 1980, when in a room in the Marriott Hotel in New Orleans, the editors met with John Fry, Joseph Levenstein and Bill Jackson to discuss new book projects. The idea was put to the group, which endorsed it enthusiastically. Encouraged by this and by John Fry's advice, the conception of *The Nature of General Family Practice* took place. It was agreed that to illustrate the universal nature of general family practice it would be useful to collect case histories from all around the world, that for preference they should be brief, and that they should be accompanied by major questions and sub-questions, but no answers. The name 'Vignettes' was applied to these cases and their questions. Subsequently, well over a hundred family physicians were asked by letter to provide ten vignettes. Sixty doctors from ten countries accepted the invitation and forwarded their contributions during the second half of 1981. Almost all of those who, for a variety of reasons were unable to contribute, said they liked the idea and looked forward to using the final product. Altogether, over 600 vignettes were received, and 583 selected for final inclusion.

This new book, from the editor of the highly successful *Pharmaceutical Analysis*, sets out to define the area of pharmaceutical chemistry as distinct from medicinal chemistry. It focuses less on prototypes of drugs that perhaps never came to market and more on the drugs currently in use. The emphasis in the book is on the physicochemical properties of drug molecules and, in so far as they are known, the way that these properties govern the interaction of the drug with its target. Important physicochemical properties include pKa and partition coefficient and the properties of the structural elements within the drug which provide interactions with the target via a range of intermolecular forces. The last fifteen years has seen a great advance in the knowledge of protein structures and a strong emphasis is given to the interaction of drugs with proteins which shape the majority of drug mechanisms. Features: Focus on intramolecular actions Mechanisms of action richly illustrated Self-assessment included Comprehensive chapters on vitamins and biotechnological products This new book, from the editor of the highly successful *Pharmaceutical Analysis*, sets out to define the area of pharmaceutical chemistry as distinct from medicinal chemistry. This is a professional level major reference work containing information, in A-Z format, on herb-drug, herb-supplement, herb - food and herb-laboratory test interactions; all of which is data referenced. Commercial herbal medicinal products are increasingly consumed on a regular basis by people in the developed world. Often such products are taken concurrently with conventional medicines, frequently without the knowledge of health care professionals. As more evidence has become available, there has been an increasing awareness of the potential and actual problems of interactions, often dangerous, between conventional medicines and herbal medicines. This proposed new major reference brings together available data on approximately 200 of the most commonly used herbal medicines in highly structured, rigorously scientific monographs. Although our texts on herbal medicines and drug interactions include the major well-known interactions, this text is able to treat the subject in considerably more detail.
