Robert Lanza is one of the
most respected scientists

in the world a US News and World Report cover story called him a genius and a renegade thinker, even likening him to Einstein. Lanza has teamed with Bob Berman, the most widely read astronomer in the world, to produce Biocentrism, a revolutionary new view of the universe. Every now and then a simple yet radical idea shakes the very foundations of knowledge. The startling discovery that the world was not flat challenged and ultimately changed the way people perceived

themselves and their relationship with the world. For most humans of the 15th century, the notion of Earth as ball of rock was nonsense. The whole of Western, natural philosophy is undergoing a sea change again, increasingly being forced upon us by the experimental findings of quantum theory, and at the same time, toward doubt and uncertainty in the physical explanations of the universes genesis and structure. Biocentrism completes this shift in worldview, turning the

planet upside down again with the revolutionary view that life creates the universe instead of the other way around. In this paradigm, life is not an accidental byproduct of the laws of physics. Biocentrism takes the reader on a seemingly improbable but ultimately inescapable journey through a foreign universe our own from the viewpoints of an acclaimed biologist and a leading astronomer. Switching perspective from physics to biology unlocks the cages in

which Western science has unwittingly managed to confine itself. Biocentrism will shatter the readers ideas of life--time and space, and even death. At the same time it will release us from the dull worldview of life being merely the activity of an admixture of carbon and a few other elements; it suggests the exhilarating possibility that life is fundamentally immortal. The 21st century is predicted to be the Century of Biology, a shift from the previous century dominated by

physics. It seems fitting, then, to begin the century by turning the universe outside-in and unifying the foundations of science with a simple idea discovered by one of the leading life-scientists of our age. Biocentrism awakens in readers a new sense of possibility, and is full of so many shocking new perspectives that the reader will never see reality the same way again. *Zoom* Springer Science & Business Media Discusses multidimensional reality,

NEW YORK TIMES BESTSELLER "If you've ever wondered how you have the capacity to wonder, some fascinating insights await you in these pages." --Adam

Grant, New York Times bestselling author of *Originals* As concise and enlightening as *Seven Brief Lessons on Physics* and *Astrophysics for People in a Hurry*, this mind-expanding dive into the mystery of consciousness is an illuminating meditation on the self, free will, and felt experience. What is consciousness? How does it arise? And why does it exist? We take our experience of being in the world for granted. But the very existence of consciousness raises

profound questions: Why would any collection of matter in the universe be conscious? How are we able to think about this? And why should we? In this wonderfully accessible book, Annaka Harris guides us through the evolving definitions, philosophies, and scientific findings that probe our limited understanding of consciousness. Where does it reside, and what gives rise to it? Could it be an illusion, or a universal property of all matter? As we try to understand

consciousness, we must grapple with how to define it and, in the age of artificial intelligence, who or what might possess it. Conscious offers lively and challenging arguments that alter our ideas about consciousness—allowing us to think freely about it for ourselves, if indeed we can.

Combining philosophical reflections with deep self-exploration to delve into the ancient mystery of death and rebirth, this book emphasizes collective rather than individual transformation. Drawing upon twenty years of experience working with nonordinary states, the author argues that when the deep psyche is hyper-simulated

using Stanislav Grof's powerful therapeutic methods, the healing that results sometimes extends beyond the individual to the collective unconscious of humanity itself.

Del Universo Macmillan
Habitar en la era del inconsciente es un libro ilustrado sobre bioarquitectura, ecología, domesticidad, placer, consciencia y otras muchas cosas relacionadas con el

habitar. En épocas de crisis es cuando se producen los grandes cambios. Y ahora es momento de replantearse cómo queremos vivir, tomar las riendas, empoderarnos y poder dirigir hacia donde queremos llevar nuestras vidas y nuestro planeta. La información es poder. Y ese poder es el motor del cambio que se produce sí o sí, y que está en nosotros dirigirlo hacia una metamorfosis o hacia una hecatombe. Muchos años de investigación, trabajo terapéutico,

autoformación y lecturas me han llevado a ver y comprender el mundo desde otra perspectiva, desde un nuevo posicionamiento posible, que difiere de las teorías convencionales que me habían enseñado en las escuelas en las que aprendí. Quizá la "pseudociencia" nos abra perspectivas, quizá la arquitectura invisible sea la clave para construir un mundo nuevo, pero es seguro que podemos transmutar creencias, que quizá lo que creíamos que era la verdad, ya hoy no

lo sea. Como el cambio del terraplanismo a la redondez. La verdad está en nosotros. Y la salida está hacia dentro. Habitar en la era del inconsciente pretende dar claves que abran otras puertas, que necesitamos abrir en esta nueva Era en el que ya no impera el conocimiento únicamente, sino la emoción, la percepción y el re-sentir. Es un libro que pone encima de la mesa muchas teorías alternativas, y las interrelaciona, explicadas con humor, lenguaje sencillo y acompañado de

música, canciones de todo tipo, época y autor, para evitar la polaridad, entrenar la integración, y abrir nuestro corazón para que el inconsciente nos muestre otros caminos, como lo hizo con Einstein o Kekulé. Entender los riesgos de construir de forma convencional, los tóxicos y las radiaciones a las que nos exponemos diariamente, entender nuestro modo de vida manipulado por intereses ajenos, para poder cambiarlo, transmutarlo, acorde con nuestra esencia, nuestro propósito

y nuestra alma única, eterna y atemporal, de valor inigualable. Es un viaje sin distancia, a un mundo en otra dimensión. No es Matrix, ni Planilandia, pero puede ser lo que queramos que sea, si de verdad creemos, y nos abrimos al vacío cuántico creador con mente y corazón abiertos, porque allí existe un mundo infinito de posibilidades. Buen viaje. *A Quantum Integration* Oxford University Press This is a fast-moving field, and these detailed methods will help drive

En la presente obra, José María, observa y descifra, con mirada de águila, las ideologías, pseudo-religiones y teorías que han ido ofreciendo caminos equivocados, que

intentan desviar al ser humano de su verdadera vocación y destino: ser uno con Dios en Cristo Jesús. La tentación es la misma, con diversos matices: alcanzar la plenitud del ser por las propias fuerzas: llegar a ser dios sin Dios. Desde aquel primer seréis como dioses de Luzbel en los albores de la historia, pasamos a la sugestión de la gnosis moderna: tú ya eres Dios . Como respuesta a tanto error, José María nos invita a la RECONQUISTA de la verdadera felicidad y

plenitud. Sólo el amor salvará al mundo. El Amor de Dios que quiere que todos sean felices con Él, y el amor al prójimo, que a través del hermano, alcanza a Dios y se une con El.

The Biology of Belief

M. Rosario M.

Initially, this book reviews the general characteristics of the Earth's magnetic field and the magnetic properties of minerals, and then proceeds to introduce the multifold applications of geomagnetism in earth sciences. The authors

analyze the contribution of geomagnetism both in more general geological fields, such as tectonics and geodynamics, and in applied ones, such as prospecting and pollution. Primarily, the book is aimed at undergraduate geology or geophysics students. It is geared to provide them with a general overview of geomagnetism, allowing them to understand what contributions this branch of science can offer in the more special sectors of earth sciences. Graduate students and geology

researchers will also benefit from it, as it enables them to gain a clear and concise image of the techniques which can be applied in their areas of specialization. Conscious Hay House Incorporated
In trying to understand the atom, physicists built quantum mechanics, the most successful theory in science and the basis of one-third of our economy. They found, to their embarrassment, that with their theory, physics encounters consciousness. Authors

Bruce Rosenblum and Fred Kuttner explain all this in non-technical terms with help from some fanciful stories and anecdotes about the theory's developers. They present the quantum mystery honestly, emphasizing what is and what is not speculation. Quantum Enigma's description of the experimental quantum facts, and the quantum theory explaining them, is undisputed. Interpreting what it all means, however, is heatedly controversial. But every

interpretation of quantum physics involves consciousness. Rosenblum and Kuttner therefore turn to exploring consciousness itself--and encounter quantum mechanics. Free will and anthropic principles become crucial issues, and the connection of consciousness with the cosmos suggested by some leading quantum cosmologists is mind-blowing. Readers are brought to a boundary where the particular expertise of physicists is

no longer the only sure guide. They will find, instead, the facts and hints provided by quantum mechanics and the ability to speculate for themselves. In the few decades since the Bell's theorem experiments established the existence of entanglement (Einstein's "spooky action"), interest in the foundations, and the mysteries, of quantum mechanics has accelerated. In recent years, physicists, philosophers, computer engineers, and even

biologists have expanded our realization of the significance of quantum phenomena. This second edition includes such advances. The authors have also drawn on many responses from readers and instructors to improve the clarity of the book's explanations.

Biocentrismo Bruno Del Medico Editore

"Marvelously funny and provocative."—Publishers Weekly Why do 70 percent of Americans believe in angels, while others are convinced that they were abducted by

aliens? What makes people believe in improbable things when all the evidence points to the contrary? And don't almost all of us, at some time or another, engage in magical thinking? In *Six Impossible Things Before Breakfast*, evolutionary biologist Lewis Wolpert delves into the important and timely debate over the nature of belief, looking at its psychological foundations to discover just what evolutionary purpose it could serve. Wolpert takes us through all that

science can tell us about the beliefs we feel are instinctive. He deftly explores different types of belief—those of children, of the religious, and of those suffering from psychiatric disorders—and he asks whether it is possible to live without belief, or whether it is a necessary component of a functioning society.

The incredible discoveries of quantum physics are completely upsetting the assumptions of classical

science. Today the technique allows amazing achievements. For example, the first quantum computers with almost unlimited computing capabilities are being realized. Some support the real possibility of time travel. In addition to these innovations known to the general public, there are others less known but no less important. They are the novelties deriving from quantum studies, among which we can mention the "superposition of states"

and the "quantum collapse". The "superposition of states" confirms that the same particle can be found simultaneously in two or more places. The theory of "quantum collapse" confirms that the behavior of matter can be decided simply by observation. These are not assumptions, but principles verified experimentally. This book does not only deal with these innovations, but gives much space to more advanced theories. These are theories announced

but not yet confirmed. Furthermore, the book also evaluates the most risky theories, provided they are scientifically based. For example, the book talks about the multiverse, or theory of parallel universes, proposed by the physicist Hugh Everett. In the same way the book speaks of non-locality. It is a psychic space totally independent of the laws of classical physics. As a result of non-locality, elementary particles, located at astronomical distances, behave as if they were

one. This book also talks about the latest research by Roger Penrose, an unbelieving physicist, and Stuart Hameroff. According to these two scientists the soul exists and can be identified with quantum fluctuations. These fluctuations have the ability to survive the physical death of the body. If really the "souls" are condensations of quantum fluctuations, we can formulate a question: will it ever be possible to devise instruments that allow dialogue with these fluctuations? The book

exposes the research of established scientists but without using any mathematical formula. The theories are exposed in a simple and understandable way to everyone. In this way everyone can discover the unsuspected aspects of the reality in which we live. It is clear that quantum physics is decreeing the end of materialism and the beginning of a new cultural phase, based on the collaboration between spirit and matter. *Quantum mysteries,*

The author of Zero explains the scientific revolution that is transforming the way we

understand our world. Previously the domain of philosophers and linguists, information theory has now moved beyond the province of code breakers to become the crucial science of our time. In *Decoding the Universe*, Charles Seife draws on his gift for making cutting-edge science accessible to explain how this new tool is deciphering everything from the purpose of our DNA to the parallel universes of our Byzantine cosmos. The result is an exhilarating adventure

that deftly combines cryptology, physics, biology, and mathematics to cast light on the new understanding of the laws that govern life and the universe. *Image Comics* Che cosa accadrà quando moriremo? Dove eravamo prima di essere messi al mondo? La realtà che percepiamo con i nostri sensi è davvero così come ci appare? Dagli albori della civiltà, gli esseri umani continuano a porsi le stesse domande e a meditare sulle medesime ossessioni. Gli antichi

cercarono risposte nel cielo, leggendo il proprio destino nell'occhio degli dèi o, come iniziarono a fare alcuni filosofi greci, affidandosi all'argomentazione logica per motivare le sventure di ogni giorno. Fu Aristarco, quasi duemila anni prima di Galileo, a mettere in discussione la vecchia credenza che ogni cosa nel cielo ruotasse attorno alla Terra, e Aristotele aveva già compreso, anticipando di secoli la fisica quantistica, che il tempo e lo spazio non sono dimensioni reali,

ma soltanto percezioni dell'essere umano. Eppure, anche dopo le conquiste scientifiche e tecnologiche dell'età moderna e contemporanea, nessuno sembra ancora in grado di rispondere ai nostri più elementari interrogativi: qualcosa continua a sfuggirci, mentre le domande si moltiplicano diventando sempre più ardite, e il nostro sguardo – capace ormai di sondare le più piccole particelle della materia e di intravedere punti assai remoti nello spazio – deve

fare i conti con i limiti dei tradizionali paradigmi scientifici. Dopo la rivoluzione culturale messa in atto dal precedente Biocentrismo, Robert Lanza e Bob Berman mirano ancora più in alto. Oltre il biocentrismo entra, con lo stupore di ogni scoperta e il rigore della biologia e dell'astrofisica, in uno spazio ancora non del tutto esplorato. Partendo dalle esperienze più comuni – la percezione dei colori di un tramonto, la sensazione delle nostre dita a contatto con una

fiamma, la capacità di «vedere» qualcosa anche con gli occhi chiusi –, gli autori si propongono di dimostrare come la realtà non esista al di fuori di noi, ma accada sempre e soltanto nella nostra mente. Un'intuizione antica, che trova terreno fertile in alcune delle più recenti e affascinanti ipotesi scientifiche, guida le ricerche biocentriche di questo libro: è l'essere umano a scrivere, attraverso la sua coscienza, la straordinaria storia dell'universo.

From the speed of light to moving mountains--and

everything in between-- ZOOM explores how the universe and its objects move. If you sit as still as you can in a quiet room, you might be able to convince yourself that nothing is moving. But air currents are still wafting around you. Blood rushes through your veins. The atoms in your chair jiggle furiously. In fact, the planet you are sitting on is whizzing through space thirty-five times faster than the speed of sound. Natural motion dominates our lives and the intricate mechanics of the world

around us. In ZOOM, Bob Berman explores how motion shapes every aspect of the universe, literally from the ground up. With an entertaining style and a gift for distilling the wondrous, Berman spans astronomy, geology, biology, meteorology, and the history of science, uncovering how clouds stay aloft, how the Earth's rotation curves a home run's flight, and why a mosquito's familiar whine resembles a telephone's dial tone. For readers who love to get smarter

without realizing it, ZOOM bursts with science writing at its best. How Life and Consciousness are the Keys to Understanding the True Nature of the Universe Il Saggiatore How nice would it be if in just five minutes we were able to pass from an emotional state of malaise to one of wellbeing? What would our life therefore be like if we had the strategies to quickly transform states of stress, anxiety, uncertainty or fear into states of joy, determination and

confidence? And how would our days be if we were able to calm recurring negative thoughts so as to access a mental space of tranquility and serenity with ease? When disempowering thoughts and emotions dominate our days, we no longer have energy and psycho-emotional space to dedicate to our goals. Suffocated by the grip of malaise, our vitality, motivation, and focus are simply lacking, giving way to a sometimes dissatisfied and

pessimistic personality. A question therefore arises spontaneously: “How is it that in the world there are people that manage to always see the glass as half full, so as to enable their optimism to attract favorable opportunities and circumstances?” The secret to becoming an “architect” of your own reality lies in transforming your psycho-emotional state into wellbeing and potential. In this book, I will reveal to you how to transform your personal reality starting from enriching and

empowering your thoughts and emotions, so as to increase your personal wellbeing and your attraction potential through Neuro-Emotional Education. WHY TRANSFORM YOURSELF? The true meaning of personal transformation. The importance of questions to access new levels of awareness. THE INTERCONNECTION BETWEEN MIND AND MATTER How mind and matter interact with each other. How to amplify your Attraction Potential. HOW THE HUMAN BRAIN

WORKS The importance of freeing yourself from electromagnetic interference recorded at a subconscious level. How to change your subconscious programs in a positive way. EMOTIONAL WELLBEING AND MALAISE How to create Neuro-Emotional Alignment in the direction of your visions. How it is possible to acquire techniques to self-regulate brain activity in Alpha waves. WHAT IS NEURO-EMOTIONAL EDUCATION? Neuro-Emotional Education:

what it is, what it is for and why it is important. How neuro-emotional skills positively impact your emotions and thoughts. HOW TO APPLY NEURO-EMOTIONAL EDUCATION Why motivation is the most powerful tool to achieve something important. How the transformation process takes place. THE AUTHOR Claudia Vece,

entrepreneur and Coach, expert in Cybernetic Science and Neuro-Emotional Coaching, was the CEO of the most important modeling agency in Paris. Throughout the course of her career, she has specialized in human development and enhancement, founding her company Quantasia SA in 2017, to support people and companies in

transforming their own reality into success. Her coaching and training courses have a practical and transformative approach based on the principles of neuroscience and quantum physics. Claudia works internationally, in Portugal she also trained over three hundred teachers in the Social and Emotional Learning.
