This Changes Everything:  
Capitalism vs. The

Climate (2014) by Naomi Klein argues that we must act now, both individually and collectively, to cut greenhouse gas emissions. If allowed to grow at the current pace, greenhouse gas emissions will destroy the Earth... Purchase this in-depth summary to learn more.

**A Field Guide to Climate Anxiety** Simon and Schuster

Climate change: watershed or endgame? In this compelling new book, Noam Chomsky, the world's leading public intellectual, and Robert

Pollin, a renowned progressive economist, map out the catastrophic consequences of unchecked climate change—and present a realistic blueprint for change: the Green New Deal. Together, Chomsky and Pollin show how the forecasts for a hotter planet strain the imagination: vast stretches of the Earth will become uninhabitable, plagued by extreme weather, drought, rising seas, and crop failure. Arguing against the misplaced fear of

economic disaster and unemployment arising from the transition to a green economy, they show how this bogus concern encourages climate denialism. Humanity must stop burning fossil fuels within the next thirty years and do so in a way that improves living standards and opportunities for working people. This is the goal of the Green New Deal and, as the authors make clear, it is entirely feasible. Climate change is an emergency that cannot be ignored. This

book shows how it can be overcome both politically and economically.

The Black Power movement has often been portrayed in history and popular culture as the

quintessential "bad boy" of modern black movement-making in America. Yet this impression misses the full extent of Black Power's contributions to U.S. society, especially in regard to black professionals in social work. Relying on extensive archival research and oral history interviews, Joyce M. Bell follows two groups of black social workers in the 1960s and 1970s as they mobilized Black Power ideas, strategies, and tactics to change their

national professional associations. Comparing black dissenters within the National Federation of Settlements (NFS), who fought for concessions from within their organization, and those within the National Conference on Social Welfare (NCSW), who ultimately adopted a separatist strategy, she shows how the Black Power influence was central to the creation and rise of black professional associations. She also provides a nuanced approach to

studying race-based movements and offers a framework for understanding the role of social movements in shaping the non-state organizations of civil society.

Fences and Windows: Dispatches from the Front Lines of the Globalization Debate brings together two years of Naomi Klein's writings and tracks the globalization conflict from Seattle to September 11th and beyond. Since the publication of No Logo, Naomi Klein has

continued tirelessly as a brilliant and informed contributor to contemporary debate. Fences and Windows: Dispatches from the Front Lines of the Globalization Debate, intended as a companion to No Logo, includes her most notable essays, speeches and articles on issues from NAFTA to Genetically Modified Organisms to the violence in Genoa. It offers introduction and explanation, looking at where the movement has come from and where it is going. More than any

other single voice, Naomi Klein articulates the concerns and complaints of a generation: about economic fundamentalism, the criminalization of dissent and the effects of Free Trade. But this book also reflects on the nature of resistance: the street protests that shocked and energized millions, carnival-style subversion and the apparent disorganization that is anti-globalization's great strength. Fences and Windows: Dispatches from the Front Lines of the

Globalization Debate is provocative, intelligent and passionate, a document, in its own right, of a unique time in our history.

A People's Curriculum for the Earth is a collection of articles, role plays, simulations, stories, poems, and graphics to help breathe life into teaching about the environmental crisis. The book features some of the best articles from Rethinking Schools magazine alongside classroom-friendly readings on climate change, energy, water, food, and pollution—as well as on people who are working to make things better. A People's

Curriculum for the Earth has the breadth and depth of Rethinking Globalization: Teaching for Justice in an Unjust World, one of the most popular books we've published. At a time when it's becoming increasingly obvious that life on Earth is at risk, here is a resource that helps students see what's wrong and imagine solutions. Praise for A People's Curriculum for the Earth "To really confront the climate crisis, we need to think differently, build

differently, and teach differently. A People's Curriculum for the Earth is an educator's toolkit for our times." — Naomi Klein, author of *The Shock Doctrine* and *This Changes Everything: Capitalism vs. the Climate*. "This volume is a marvelous example of justice in ALL facets of our lives—civil, social, educational, economic, and yes, environmental. Bravo to the Rethinking Schools team for pulling this collection together and making us think more holistically about what we

mean when we talk about justice." — Gloria Ladson-Billings, Kellner Family Chair in Urban Education, University of Wisconsin-Madison. "Bigelow and Swinehart have created a critical resource for today's young people about humanity's responsibility for the Earth. This book can engender the shift in perspective so needed at this point on the clock of the universe." — Gregory Smith, Professor of Education, Lewis & Clark College, co-author with David Sobel of *Place- and*

Long before the pandemic, economies across the world were in trouble, with growth slowing across the board. This downturn coincided with growing inequality and social exclusion. Rising political dissatisfaction with ruling elites fuelled the rise of populism. Add to this the alarming environmental emergency and few can deny we live in a time of multiple sustainability crises. While this conclusion can lead to

despair, in this broad-ranging book Raphael Kaplinsky, a leading development policy analyst, argues that the future is not necessarily bleak. Interrogating the causes and nature of the systemic crises we are living through, he shows how the challenges which we now face mirror previous historical epochs, in which dominant 'techno-economic' paradigms flourish, mature and run into crisis. In each case, decisive action is required to move to a more

economically and socially sustainable world. In our time, we are witnessing the exhaustion of the Mass Production paradigm. How we herald and manage the transition to the next paradigm – that of Information and Communications Technologies – will determine our capacity to build a more prosperous, equitable and environmentally sustainable world. This book sets out an integrated agenda for action by multiple stakeholders to achieve

this end.

### The Shock Doctrine

Macmillan

"It is worse, much worse, than you think. If your anxiety about global warming is dominated by fears of sea-level rise, you are barely scratching the surface of what terrors are possible. In California, wildfires now rage year-round, destroying thousands of homes. Across the US, "500-year" storms pummel communities month after month, and floods displace tens of millions annually. This is only a

preview of the changes to come. And they are coming fast. Without a revolution in how billions of humans conduct their lives, parts of the Earth could become close to uninhabitable, and other parts horrifically inhospitable, as soon as the end of this century. In his travelogue of our near future, David Wallace-Wells brings into stark relief the climate troubles that await -- food shortages, refugee emergencies, and other crises that will reshape the globe. But the world

will be remade by warming in more profound ways as well, transforming our politics, our culture, our relationship to technology, and our sense of history. It will be all-encompassing, shaping and distorting nearly every aspect of human life as it is lived today. Like *An Inconvenient Truth* and *Silent Spring* before it, *The Uninhabitable Earth* is both a meditation on the devastation we have brought upon ourselves and an impassioned call

to action. For just as the world was brought to the brink of catastrophe within the span of a lifetime, the responsibility to avoid it now belongs to a single generation"--  
*No Is Not Enough* MIT Press

Thirty years ago Bill McKibben offered one of the earliest warnings about climate change. Now he broadens the warning: the entire human game, he suggests, has begun to play itself out. Bill McKibben's groundbreaking book *The*

*End of Nature* -- issued in dozens of languages and long regarded as a classic -- was the first book to alert us to global warming. But the danger is broader than that: even as climate change shrinks the space where our civilization can exist, new technologies like artificial intelligence and robotics threaten to bleach away the variety of human experience. Falter tells the story of these converging trends and of the ideological fervor that keeps us from bringing them under control. And

then, drawing on McKibben's experience in building 350.org, the first truly global citizens movement to combat climate change, it offers some possible ways out of the trap. We're at a bleak moment in human history -- and we'll either confront that bleakness or watch the civilization our forebears built slip away. *Falter* is a powerful and sobering call to arms, to save not only our planet but also our humanity. *This Changes Everything* Haymarket Books

heroes and villains, charged with towering questions of good and evil, Atlas Shrugged is Ayn Rand's magnum opus: a philosophical revolution told in the form of an action thriller—nominated as one of America's best-loved novels by PBS's The Great American Read. Who is John Galt? When he says that he will stop the motor of the world, is he a destroyer or a liberator? Why does he have to fight his battles not against his enemies but against those who need him most? Why

does he fight his hardest battle against the woman he loves? You will know the answer to these questions when you discover the reason behind the baffling events that play havoc with the lives of the amazing men and women in this book. You will discover why a productive genius becomes a worthless playboy...why a great steel industrialist is working for his own destruction...why a composer gives up his career on the night of his triumph...why a beautiful

woman who runs a transcontinental railroad falls in love with the man she has sworn to kill. Atlas Shrugged, a modern classic and Rand's most extensive statement of Objectivism—her groundbreaking philosophy—offers the reader the spectacle of human greatness, depicted with all the poetry and power of one of the twentieth century's leading artists.

What is the Green New

Deal and how can we afford it? To protect the future of life on earth, we need to do more than just reimagine the economy—we have to change everything. One of the seminal thinkers of the program that helped ignite the US Green New Deal campaign, Ann Pettifor explains how we can afford what we can do, and what we need to do, before it is too late. *The Case for the Green New Deal* argues that economic change is wholly possible, based on the understanding that

finance, the economy and the ecosystem are all tightly bound together. The GND demands total decarbonization and a commitment to an economy based on fairness and social justice. It proposes a radical new understanding of the international monetary system. Pettifor offers a roadmap for financial reform both nationally and globally, taking the economy back from the 1%. This is a radical, urgent manifesto that we must act on now. *The Rise of Steam Power*

"Abbie Hoffman, Yippie non-leader, notorious dope addict and up-and-coming rock group (the WHAT), is currently on trial with seven others for conspiracy to incite riot during the Democratic Convention. When he returned from the Woodstock Festival he had five days before leaving for Chicago to prepare for the trial. Woodstock Nation, which the author wrote in longhand while lying

upside down, stoned, on the floor of an unused office of the publisher, is the product of those five days. Other works by Mr. Hoffman include *Revolution for the Hell of It and Fuck the System*, which he describes as a "tender love epic".-- Back cover.

Deforestation.  
Desertification. Species extinction. Global warming. Growing threats to food and water. The driving issues of our times are the result of one huge

problem: Us. As the population continues to grow, our problems will increase. And this means that every way we look at it, a planet of ten billion people is likely to be a nightmare. Stephen Emmott, a scientist whose lab is at the forefront of research into complex natural systems, sounds the alarm. TEN BILLION is a snapshot of our planet, and our species, approaching a crisis, and a stark analysis of where this leaves us. TEN BILLION is not another climate book. TEN BILLION

is a book about us. *Four Futures* Simon and Schuster  
A youth movement is reenergizing global environmental activism. The "climate generation"—late millennials and iGen, or Generation Z—is demanding that policy makers and government leaders take immediate action to address the dire outcomes predicted by climate science. Those inheriting our planet's environmental problems expect to encounter challenges, but they may

not have the skills to grapple with the feelings of powerlessness and despair that may arise when they confront this seemingly intractable situation. Drawing on a decade of experience leading and teaching in college environmental studies programs, Sarah Jaquette Ray has created an “existential tool kit” for the climate generation. Combining insights from psychology, sociology, social movements, mindfulness, and the environmental humanities, Ray explains

why and how we need to let go of eco-guilt, resist burnout, and cultivate resilience while advocating for climate justice. A Field Guide to Climate Anxiety is the essential guidebook for the climate generation—and perhaps the rest of us—as we confront the greatest environmental threat of our time.

A fascinating investigation into how people around

the globe are cashing in on a warming world  
McKenzie Funk has spent the last six years reporting around the world on how we are preparing for a warmer planet. Funk shows us that the best way to understand the catastrophe of global warming is to see it through the eyes of those who see it most clearly—as a market opportunity. Global warming’s physical impacts can be separated into three broad categories: melt, drought,

and deluge. Funk travels to two dozen countries to profile entrepreneurial people who see in each of these forces a potential windfall. The melt is a boon for newly arable, mineral-rich regions of the Arctic, such as Greenland—and for the surprising kings of the manmade snow trade, the Israelis. The process of desalination, vital to Israel's survival, can produce a snowlike by-product that alpine countries use to prolong their ski season. Drought creates opportunities for

private firefighters working for insurance companies in California as well as for fund managers backing south Sudanese warlords who control local farmland. As droughts raise food prices globally, there is no more precious asset. The deluge—the rising seas, surging rivers, and superstorms that will threaten island nations and coastal cities—has been our most distant concern, but after Hurricane Sandy and failure after failure to cut global carbon emissions, it is not so distant. For

Dutch architects designing floating cities and American scientists patenting hurricane defenses, the race is on. For low-lying countries like Bangladesh, the coming deluge presents an existential threat. Funk visits the front lines of the melt, the drought, and the deluge to make a human accounting of the booming business of global warming. By letting climate change continue unchecked, we are choosing to adapt to a warming world. Containing the resulting

surge will be big business; some will benefit, but much of the planet will suffer. McKenzie Funk has investigated both sides, and what he has found will shock us all. To understand how the world is preparing to warm, Windfall follows the money.

**Drawdown** Simon and Schuster

A renowned Harvard professor debunks prevailing orthodoxy with a new intellectual foundation and a practical pathway forward for a system that has lost its

moral and ethical foundation. Free market capitalism is one of humanity's greatest inventions and the greatest source of prosperity the world has ever seen. But this success has been costly. Capitalism is on the verge of destroying the planet and destabilizing society as wealth rushes to the top. The time for action is running short. Rebecca Henderson's rigorous research in economics, psychology, and organizational behavior, as well as her many years

of work with companies around the world, give us a path forward. She debunks the worldview that the only purpose of business is to make money and maximize shareholder value. She shows that we have failed to reimagine capitalism so that it is not only an engine of prosperity but also a system that is in harmony with environmental realities, the striving for social justice, and the demands of truly democratic institutions. Henderson's deep understanding of

how change takes place, combined with fascinating in-depth stories of companies that have made the first steps towards reimagining capitalism, provide inspiring insight into what capitalism can be. Together with rich discussions of important role of government and how the worlds of finance,

governance, and leadership must also evolve, Henderson provides the pragmatic foundation for navigating a world faced with unprecedented challenge, but also with extraordinary opportunity for those who can get it right.
