The Information and
Communications for
Development series looks
in depth at how
information and
communications
technologies are affecting

economic growth in
developing countries. This
new report, the fourth in
the series, examines the
topic of data-driven
development, or how
better information makes
for better policies. The
objective is to assist
developing-country firms
and governments in
unlocking the value of the
data they hold for better
service delivery and
decision making and to
empower individuals to
take more control of their
personal data. We are
undoubtedly experiencing
a data revolution in which

our ability to generate,
process, and utilize
information has been
magnified many times
over by the machines that
we increasingly rely upon.
This report is about how
the data revolution is
changing the behavior of
governments, individuals,
and firms and how these
changes affect the nature
of development:
economic, social, and
cultural. How can
governments extract
value from data to
improve service delivery
in the same way that
private companies have

learned to do for profit? Is it feasible for individuals to take ownership of their own data and to use it to improve their livelihoods and quality of life? Can developing-country firms compete with the internet majors on their own turf and be even more innovative in their use of data to serve local customers better? Though the report is aimed primarily at government policy makers, it also has great relevance for individuals concerned about how their personal data is used and how the

data revolution might affect their future job prospects. For private sector firms, particularly those in developing countries, the report suggests how they might expand their markets and improve their competitive edge. For development professionals, the report provides guidance on how they might use data more creatively to tackle long-standing global challenges, such as eliminating extreme poverty, promoting shared prosperity, or mitigating the effects of

climate change. The report's chapters explore different themes associated with the supply of data, the technology underlying it, and the demand for it. An overview chapter focuses on government use of data and presentation of definitions. Part I of the report then looks at the "supply side" of the data sector, with chapters on data connectivity and capacity (where data comes from, how it is stored, and where it goes) and data technology (specifically big data

analytics and artificial intelligence) and how this is contributing to development. Part II looks at the sector's "demand side," with a chapter on people's use of data and another that examines how firms use digital platforms in the data economy and how that contributes to competitiveness. Part III brings together the policy implications for developing-country stakeholders, with a chapter considering government policies for data, including data

protection and privacy. A closing Data Notes appendix looks at statistical indicators associated with the use of data and presents the 2018 update of the Digital Adoption Index (DAI), a composite indicator introduced in the 2016 World Development Report: Digital Dividends. *Byrd and Chen's Canadian Tax Principles, 2010-2011 Edition* Lambers CPA Review This book examines why authoritarian governments are willing to address environmental

problems that have an international impact, such as CO2 emissions, but are reluctant to address problems that have only a domestic impact. In a case study of Azerbaijani oil politics, it demonstrates how the incumbent Azerbaijani regime has taken important measures trying to address CO2 emissions while ignoring the damage caused by oil pollution on the Caspian coast. The book argues that resource-rich authoritarian governments are eager to

join international environmental initiatives to improve their image, but they address domestic environmental issues mainly if they threaten their hold on power. This book is an important contribution to scholarship on environmental governance in the post-Soviet space, an area that is poorly researched. Therefore, it is a must-read for researchers and scholars interested in post-Soviet studies, as well as in the nexus between mineral-rich

regions and how social policy is created, e.g., environment, education, and healthcare. In addition, this book will be of tremendous importance for policymakers and international organizations as it looks into the motivation of authoritarian states in the post-Soviet space for environmental measures. *The Classic Edition*

Advances in Concrete
Slab Technology

documents the

proceedings of the

International Conference

on Concrete Slabs held at

Dundee University on

April 3-6, 1979. This book

discusses the influence of

steel fiber-reinforcement

on the shear strength of

slab-column connections; sulfur-treated concrete slabs; yield line analysis of orthotropically reinforced exterior panels of flat slab floors; and behavior of flat slab/edge column joints. The design of multiple panel flat slab structures; structural behavior of floor slabs in shear wall buildings; shrinkage and cracking of concrete at early ages; and slab construction for HAB system modules are also elaborated. This text likewise covers the direct finishing of concrete slabs using the early age power

grinding technique; application of vacuum dewatering to in-situ slab production; retexturing of concrete slabs; and fatigue resistance of composite precast and in situ concrete floors. This publication is a good reference for students and individuals concerned with the practices and research relating to slab technology.

Islam's tense relationship with modernity is one of the most crucial issues of our time. Within Islamic legal systems, with their traditional preference for eyewitness testimony, this struggle has played a significant role in attitudes toward expert witnesses. Utilizing a uniquely comparative approach, Ron Shaham here examines the evolution of the role of

such witnesses in a number of Arab countries from the premodern period to the present. Shaham begins with a history of expert testimony in medieval Islamic culture, analyzing the different roles played by male experts, especially physicians and architects, and females, particularly midwives. From there, he focuses on the case of Egypt, tracing the country's reform of its traditional legal system along European lines beginning in the late nineteenth century.

Returning to a broader perspective, Shaham draws on a variety of legal and historical sources to place the phenomenon of expert testimony in cultural context. A truly comprehensive resource, *The Expert Witness in Islamic Courts* will be sought out by a broad spectrum of scholars working in history, religion, gender studies, and law.

This book presents a unified view of calculus in which theory and practice reinforces each other. It is about the theory and applications of derivatives (mostly partial), integrals, (mostly multiple or improper), and infinite series (mostly of functions rather than of numbers),

at a deeper level than is found in the standard calculus books. Chapter topics cover: Setting the Stage, Differential Calculus, The Implicit Function Theorem and Its Applications, Integral Calculus, Line and Surface Integrals—Vector Analysis, Infinite Series, Functions Defined by Series and Integrals, and Fourier Series. For

individuals with a sound knowledge of the mechanics of one-variable calculus and an acquaintance with linear algebra.
