MMPI-A: Assessing Adolescent Psychopathology SAGE Publications
 For centuries the "treatment" of mentally disturbed individuals was quite simple. They were accused of collusion with evil spirits, hunted, and persecuted. The last "witch" was killed as late as 1782 in Switzerland.

Mentally disturbed people did not fare much better even when the witchhunting days were gone. John Christian Reil gave the following description of mental patients at the crossroads of the fifteenth and sixteenth centuries: We incarcerate these miserable creatures as if they were criminals in abandoned jails, near to the lairs of owls in barren canyons beyond the city gates, or in damp dungeons of prisons, where never a pitying look of a humanitarian

penetrates; and we let them, in chains, rot in their own excrement. Their fetters have eaten off the flesh of their bones, and their emaciated pale faces look expectantly toward the graves which will end their misery and cover up our shamefulfulness. (1803) The great reforms introduced by Philippe Pinel at Bicetre in 1793 augured the beginning of a new approach. Pinel ascribed the "sick role," and called for compassion and help. One does not need to know much

about those he wants to hurt, but one must know a lot in order to help. Pinel's reform was followed by a rapid development in research of causes, symptoms, and remedies of mental disorders. There are two main prerequisites for planning a treatment strategy.

Entering and Leaving Vocation Springer Science & Business Media
This book provides an overview of the research related to psychological assessment across South Africa. The thirty-six chapters provide a combination of psychometric theory and practical assessment applications in order to combine the currently disparate research that has been conducted locally in this field. Existing South African texts on psychological assessment are

predominantly academic textbooks that explain psychometric theory and provide brief descriptions of a few testing instruments.

Psychological Assessment in South Africa provides in-depth coverage of a range of areas within the broad field of psychological assessment, including research conducted with various psychological instruments. The chapters critically interrogate the current Eurocentric and Western cultural hegemonic practices that

dominate the field of psychological assessment. The book therefore has the potential to function both as an academic text for graduate students, as well as a specialist resource for professionals, including psychologists, psychometrists, remedial teachers and human resource practitioners. Counseling Assessment and Evaluation Guilford Publications Clinical Psychology is a graduate-level introduction to the field of clinical psychology. While most textbooks focus on

either assessment, treatment, or research, this textbook covers all three together specifically for the introductory level graduate course. Chapter coverage is diverse and contributors come from both PhD and PsyD programs and a variety of theoretical orientations. Chapter topics cover the major activities of the contemporary clinical psychologist with an introduction focusing on training models. The book has a mentoring style designed to highlight the relevance of the topics

discussed to clinicians in training. Assessment and treatment chapters focus on evidence-based practice, comparing and contrasting different options, the basis for clinical choice between them, and efficacy of same. It will also introduce the business and ethical aspects of the clinical career that current introductory books do not include, such ethics in assessment, treatment, and research; third party payers; technological developments; dissemination of research

findings; cross-cultural issues; and the future of the profession. The text is designed for students in their first year of clinical psychology graduate training. * Includes assessment, treatment, and practice issues * Compares and contrasts different therapeutic styles * Exemplifies practical application through case studies * Focuses on evidence-based practice * Orients future clinicians to contemporary issues facing psychological practices

Introduction to Test Construction in the Social and Behavioral Sciences NYU Press

This book illuminates the

process of child psychological assessment in community psychology through discussion, theory, and case studies of collaborative, systemic treatment of children and their parents. "Assessing Children in the Urban Community" presents a semi-structured form of collaborative psychological assessment, designed to help clients gain new insights and make changes in their lives. Traditional psychological assessment focuses on diagnosis and treatment but has been

slow to include contextual elements, particularly social and cultural contexts into the assessment process and psychological report. Clients receiving services in a community psychology clinic pay for their treatment through state welfare coverage. They cannot choose their providers, they cannot always determine the length and course of their mental health care, they often do not have access to transportation to begin services, to continue them, or to take

advantage of follow-up recommendations. The Therapeutic Assessment model is particularly adaptable to community psychology because it allows maximum interaction in the assessment process and promotes participation and collaboration in an often dis-empowering system. This book will be relevant to clinical psychologists, community psychologists, social workers, family therapists, graduate students in psychology, social work, marriage and family

therapists, and counseling programs.

A Practical Guide John Wiley & Sons

Introductory texts on psychological testing and evaluation historically are not in short supply.

Typically, however, such texts have been relatively superficial in their discussion of clinical material and have focused primarily on the theoretical and psychometric properties of individual tests. More practical, clinically relevant presentations of psychological instruments

have been confined to individual volumes with advanced and often very technical information geared to the more sophisticated user.

Professors in introductory graduate courses are often forced to adopt several advanced texts to cover the material, at the same time helping students wade through unnecessary technical information in order to provide a basic working knowledge of each test. Understanding Psychological Assessment is an attempt to address

these concerns. It brings together into a single volume a broad sampling of the most respected instruments in the psychologist's armamentarium along with promising new tests of cognitive, vocational, and personality functioning. Additionally, it presents the most updated versions of these tests, all in a practical, clearly written format that covers the development, psychometrics, administrative considerations, and interpretive hypotheses for each instrument.

Clinical case studies allow the reader to apply the interpretive guidelines to real clinical data, thereby reinforcing basic understanding of the instrument and helping to insure that both the student and practitioner can actually begin to use the test. Understanding Psychological Assessment includes cognitive and personality tests for adults, children, and adolescents, as well as chapters on the theory of psychological measurement and integrated report writing.
