Toxocara is a parasitic helminth worm which continues to stimulate both public concern and scientific interest. Toxocara canis and T.cati, the most studied species, are gastrointestinal parasites of dogs and cats and their eggs can contaminate the environment, thus exposing humans and other mammals and birds to infection. Many questions remain unanswered about the host-parasite relationship, its epidemiology and public health significance. Veterinarians and clinicians are interested in its importance as a zoonosis. The parasite's capacity to cause ocular disease is of concern to ophthalmologists, while its propensity to stimulate allergic manifestations is of interest to allergologists, dermatologists and respiratory medicine specialists. Furthermore Toxocara provides a unique model system to explore questions in parasite biology. This book provides a comprehensive review of Toxocara and the disease it causes known as toxocariasis.

Les maladies systémiques regroupent un cadre hétérogène de maladies (connectivites, vascularites, granulomatoses...) dont la pathogénie est caractérisée par une atteinte de plusieurs organes. Bien qu'il s'agisse pour la plupart de maladies orphelines, ces pathologies sont susceptibles d'intéresser tous les médecins du fait de leur polymorphisme clinique. L'atteinte ophtalmologique est fréquente dans bon nombre de ces maladies, principalement en rapport avec une atteinte inflammatoire ou vasculaire. Elle constitue souvent une clé pour le diagnostic et peut mettre en jeu le pronostic fonctionnel en raison du risque de cécité. La sémiologie oculaire des maladies systémiques et les moyens d'explorations ophtalmologiques sont souvent mal connus des internistes ou des spécialistes d'organes. Inversement, les maladies systémiques sont l'objet de nombreuses interrogations de la part des ophtalmologistes. De ce constat est né Œil et Maladies systémiques qui présente, en 50 chapitres : • les principaux syndromes ophtalmologiques et les moyens d'explorations, destinés principalement aux non-ophtalmologistes • l'expression ophtalmologique des maladies systémiques (connectivites et vascularites, certaines maladies infectieuses et autres affections multiviscérales) ainsi que les aspects diagnostiques, pronostiques et thérapeutiques. Le professeur Pascal Sève, interniste, et le professeur Laurent Kodjikian, ophtalmologiste, tous deux rattachés à l'hôpital de la Croix-Rousse à Lyon, ont coordonné l'ouvrage dont les rédacteurs sont issus des diverses spécialités concernées : ophtalmologistes et internistes bien sûr, mais également spécialistes d'organes tels que dermatologues, néphrologues, neurologues, etc., tous référents reconnus dans leur domaine d'expertise. Ce livre apporte des réponses utiles et précises aux praticiens confrontés

aux atteintes ophtalmologiques des maladies systémiques. Il intéressera donc les ophtalmologistes, internistes, rhumatologues, neurologues, pneumologues et autres spécialistes d'organes.

On October 16 and 17, 2000, we hosted an international workshop entitled "Statistical Design, Measurement, and Analysis of Health Related Quality of Life." The workshop was held in the beautiful city of Arradon, South Brittany, France with the main goal of fostering an interdisciplinary forum for discussion of theoretical and applied statistical issues arising in studies of health-related quality of life (HRQoL). Included were biostatisticians, psychometricians and public health professionals (e.g., physicians, sociologists, psychologists) active in the study of HRQoL. In assembling this volume, we invited each conference participant to contribute a paper based on his or her presentation and the ensuing and very interesting discussions that took place in Arradon. All papers were peer-reviewed, by anonymous reviewers, and revised before final editing and acceptance.

Although this process was quite time consuming, we believe that it greatly improved the volume as a whole, making this book a valuable contribution to the field of HRQoL research. The volume presents a broad spectrum of papers presented at the Workshop, and thus illustrates the range of current research related to the theory, methods and applications of HRQoL, as well as the interdisciplinary nature of this work. Following an introduction written by Sir David Cox, it includes 27 articles organized into the following chapters.

For the past two generations, extensive research has been conducted on the determinants of homosexuality. But, until now,

scant attention has been paid to what is perhaps the most mysterious--and potentially illuminating--variation of human sexual expression, bisexuality. Today, as ignorance and fear of AIDS makes greater awareness of all forms of sexual behavior an urgent matter of private and public consequence, leading sex researchers Martin Weinberg, Colin Williams, and Douglas Pryor provide us with the first major study of bisexuality. Weinberg, Williams, and Pryor explore the riddle of dual attraction in their study of 800 residents of San Francisco. Fieldwork, intensive interviews, and surveys provided a wealth of data about the nature of bisexual attraction, the steps that lead people to become bisexual, and how sexual preference can change over time. They found that heterosexuals, more often than homosexuals, become bisexual; that bisexual men and women differ markedly in their sexual behavior and romantic feelings; that most bisexuals ultimately settle into long-term relationships while continuing sexual activity outside those relationships; and they also explain why transsexuals often become bisexual. Moreover, the authors discovered that as the AIDS crisis unfolded, many bisexual men entered into monogamous relationships with women, and bisexual women into more lesbian relationships. Recent media accounts attest that a growing number of researchers and writers are narrowing the fundamental cause of sexual preference to a single factor, biology. But if, as this study shows, learning plays a significant part in helping people traverse the boundaries of gender, if past and present intimate relationships influence their changing preferences, and if bisexual activity is inseparable from a social environment which provides distinctive sexual opportunities, then a mosaic of factors far more complex than those previously considered must be entertained in explaining the fuller spectrum of sexual preferences. *Dual Attraction* is one of the most significant contributions to our understanding of sexuality since the original Kinsey reports and Bell and Weinberg's 1978 international bestseller, *Homosexualities*. It is must reading for all those interested in the study of sexual behavior--especially now, since the onset of AIDS. *The Node of Ranvier* Oxford University Press, USA

The technology of automatic pattern recognition and digital image processing, after over two decades of basic research, is now appearing in important applications in biology and medicine as well as industrial, military and aerospace systems. In response

to a suggestion from Mr. Norman Caplan, the Program Director for Automation, Bioengineering and Sensing at the United States National Science Foundation, the authors of this book organized the first United States-France Seminar on Biomedical Image Processing. The seminar met at the Hotel Beau Site, St. Pierre de Chartreuse, France on May 27-31, 1980. This book contains most of the papers presented at this seminar, as well as two papers (by Bisconte et al. and by Ploem ~ al.) discussed at the seminar but not appearing on the program. We view the subject matter of this seminar as a confluence among three broad scientific and engineering disciplines: 1) biology and medicine, 2) imaging and optics, and 3) computer science and computer engineering. The seminar had three objectives: 1) to discuss the state of the art of biomedical image processing with emphasis on four themes: microscopic image analysis, radiological image analysis, tomography, and image processing technology; 2) to place values on directions for future research so as to give guidance to agencies supporting such research; and 3) to explore and encourage various areas of cooperative research between French and United States scientists within the field of Biomedical Image Processing.
