This book shows, in detail and with concrete examples, how educational theory and research can be translated into practice. Well-known researchers who have worked to establish productive, sustainable connections between the knowledge produced by the research community and the practices employed in school settings provide descriptions of successful strategies that have been used to bridge the gap among theory, research, and practice. The volume addresses three main themes: *analysis of how educational theory and research may be used to improve student learning and achievement in mathematics, science, and reading; *examination of how educational theory and research has been used to conceptualize, implement, and evaluate the effects of challenges of large-scale reform; and *exploration of how different models of intelligence and creativity have informed educational practice. Viewed as a collective effort to translate theory and research into educational practice, the interventions and programs described by the contributors to this volume represent nearly 200 years of work. As a compendium of successful strategies, this book will help others identify ways to make their own research more useful to their practice communities. As an investigation of persistent, seemingly intractable problems encountered when attempting to connect theory and research to the everyday work of teachers and students in classrooms, the analyses presented in this volume demonstrate where additional work is needed. By examining critical, persistent challenges encountered when attempting to connect educational theory and research to the everyday work of teachers in classrooms and schools, this book will help improve the practical value of educational research and help chart the course for future research. Translating Theory and Research into Educational Practice is intended as a text for advanced undergraduate and graduate courses across the discipline of education and should be particularly relevant for classes dealing with educational research, educational policy, and teaching and learning. The book is equally relevant for various communities interested in improving connections between research and practice, including educational researchers, educational psychologists, psychologists, teachers, other educational professionals such as state school officers, district officials, and policy makers. The authors' comprehensive descriptions and critical reflections will provide readers with valuable insights about the practical demands, theoretical complexities, and political realities associated with efforts to translate theory and research into effective educational practice.

This book presents the components of Success for All and Roots & Wings, two comprehensive restructuring programs for elementary schools designed to make the idea that all children can learn a practical, daily organizing principle, especially in schools serving students at risk. Success for All, first implemented in 1987, was created to show how schools could ensure that virtually all children could learn to read and write. It uses research-based curricular strategies, individual tutoring, and active family support. Roots & Wings, which began in 1991, extends similar principles to mathematics, social studies, and science. Nine chapters examine: (1) "One Million Children: Success for All" (an overview); (2) "Reading, Writing, and Language Arts Programs"; (3) "Tutoring Programs"; (4) "Prekindergarten and Kindergarten Programs"; (5) "Roots & Wings: Adding Social Studies, Science, and Mathematics to Success for All"; (6) "Family and Student Support"; (7) "Facilitators and the Change Process"; (8) "Research on Success for All and Roots & Wings"; and (9) "Success for All, Roots & Wings, and School Reform" (the implications of research for compensatory education, special education, and school reform in general). Appendixes to the first five chapters present sample lessons, activities, and checklists. (Contains 131 references.) (SM)

The Internet and the many applications it supports continue to transform and expand the ways in which it is possible to relate, communicate, collaborate, and perform human service work. In this book, human service researchers and practitioners explore major opportunities and challenges to well being, social justice, and human service work that technology use in everyday life has exposed. Drawing on the latest research their contributions examine issues associated with human service practices in the network society, including: the implications of an expanded capacity to share human service data across agency and national boundaries; ethical issues associated with the use of remote sensing and surveillance technologies (e.g. the satellite tracking of offenders, and telecare services for older people); the risks and benefits of social network sites including issues associated with online privacy, intimacy, and safety; and the influence of technology-mediated services on human relationships and the sense of 'being present' with another person. Human Services in the Network Society will be of considerable interest to human service professionals, academics and researchers who are concerned about the social impact of networked technologies. This book was previously published as a special issue of the Journal of Technology in Human Services.
