Power Plants / By johnzactruba / Mechanical Engineering. LNG is Liquefied Natural gas and CNG is Compressed Natural Gas. Both are Natural gas in two physical forms. ... Natural gas is compressed to 200 bar pressure so that the volume is almost 1% of the original. This makes it much more convenient ...How are LNG, CNG and LPG different - Bright Hub Engineering CNG is Compressed Natural Gas, which is mainly methane compressed at a pressure of 200 to 248 bars. LPG is

Liquefied Petroleum Gas, a mixture of propane and butane liquefied at 15 °C and a pressure of 1.7 - 7.5 bar. Some variants of LPG are primarily propane so LPG is often colloquially called propane. CNG is cheaper and cleaner, but LPG has a higher calorific value. CNG vs LPG - Difference and Comparison | Diffen

Nowadays, LPG is used as an alternative to natural gas for various methods like cooking, motor fuel, refrigeration, etc. It is referred to as 'Auto Gas'. It has started

to replace chlorofluorocarbons in an effort to reduce damage to the ozone layer. The term CNG is an abbreviation for 'Compressed Natural Gas'. It is ordinary natural gas. Difference between LPG and CNG | LPG vs CNG Both CNG and LPG powertrain systems are cheaper and more eco-friendly in cars than diesel or gasoline systems. Their combustion is comparably cleaner, reducing emissions of particulates and nitrogen oxides. Both fuels are also cheaper

than gasoline or diesel. Thanks to low production costs and tax incentives, compressed natural gas (CNG) costs drivers up to 50 percent less.
