ITI Technician Power Electronics Systems Petrogav International
A young couple who grew up in an Eastern European communist country decided to leave their homeland. They were not able to leave legally, so they crossed the Iron Curtain illegally. They spent some time in Italian refugee camps in very poor conditions. At last, they were able to immigrate to the United States where they had to face an even harder life in the beginning. They were fighting for their lives moving through three states. After four years, they gave up and moved back to the still communist Hungary. The Hungarian government betrayed them in spite of the general amnesty. They were not able to leave this country again legally; they escaped to Yugoslavia using a small boat at the border river. They traveled through the country to reach the Italian border. Joe was afraid to cross the border through the dense forest, because Mary was pregnant. They tried to cross the border with their American documents, but it failed. They obtained an entry visa at the nearest Italian Consulate and fled to Italy again. They traveled to Milan where they were able to get entry visas to Switzerland. Joe called his old time friend in Switzerland asking for his help. They arrived in Zurich where his friend helping them. They were afraid of return to the United States, because of Mary's condition. They spent some time in a refugee home where Chris, their son, was born. After another refugee camp close to Zurich, Joe found a job and they moved into a nice apartment. A local Swiss family helped them and they became very good friends. Later, Joe got sick. The burden that he was carrying on his shoulders for years caused problems, but with professional help, he was able to get out of trouble. He started a part-time job in a gift shop. Later Mary also got a job and little Chris went to daycare. After years, staying in Switzerland with any settlement status, Joe and Mary decided to move on. Mary's girlfriend helped them to get into Canada, but they had to show up \$10,000, which was not easy to accumulate. When they obtained the money, they were able to fly to Canada. They settled down in Toronto. Joe was lucky because he got an engineering job soon and he was able to support his family. Joe got sick again and could not walk for a while, but with excellent treatment and positive thinking, he was able to overcome his problem. He and his wife graduated as interior designers and started a new business. After some good years, the bad years came. Due to the recession, Joe and Mary lost their business. Joe overcame it again when he started a repair business beginning with churches. At last, he was doing very well. He took a business trip to his native Hungary where he had so much fear and bad dreams of not being able to get out. Fortunately, nothing-went wrong and he completed his business trip. He finally arrived to Canada and almost kissed the soil with joy. His journey was ending, because he arrived home in the freedom.

Petrogav International provides courses for participants that intend to work on offshore drilling and production platforms. Training courses are taught by professionals from the oil and gas industry with current knowledge and years of field experience. The participants will get all the necessary competencies to work on the offshore drilling platforms and on the offshore production platforms. It is intended also for non-drilling and non-production personnel who work in drilling, exploration and production industry. This includes marine and logistics personnel, accounting, administrative and support staff, environmental professionals, etc. This course provides a non-technical overview of the phases, operations and terminology used on offshore oil and gas platforms. It is intended also for non-production personnel who work in the offshore drilling, exploration and

production industry. This includes marine and logistics personnel, accounting, administrative and support staff, environmental professionals, etc. No prior experience or knowledge of drilling operations is required. This course will provide participants a better understanding of the issues faced in all aspects of production operations, with a particular focus on the unique aspects of offshore operations.

ITI Technician Mechatronics Petrogav International

The Spatialities of Radio Astronomy examines the multidisciplinary overlap between the spatial disciplines and the studies of science and technology through a comparative study of four of the world's most important radio telescopes. Employing detailed analysis, historical research, interviews, personal observations, and various conceptual manoeuvres, Guy Trangoš reveals the depth of spatial process active at these scientific sites and the territories they traverse. Through the conceptual frameworks of territory, hyper-concentration, and contingency, Trangoš interprets the telescope as exploded across space and time, present in multiple connected sites simultaneously, and active in the production of space. He develops a historiographic and contemporary analysis of the Atacama Large Millimeter/submillimeter Array (ALMA, Chile); the Five-hundred-meter Aperture Spherical radio Telescope (FAST, China); the Arecibo Observatory (Puerto Rico); and the MeerKAT/SKA (South Africa). These case studies are global exemplars of the different spatial transformations that occur through science. Their relationships to surrounding communities and landscapes reveal deeper constitutional processes embodied in each institutional and spatial form. This book spans the modern history of architecture and science, the studies of science, technology and society, and urban theory. It is of specific interest to architects and designers expanding their analysis of spatial production, scholars in the study of geography, landscape, science, technology, and astronomy, and people fascinated with how these radio telescopes were conceptualised, built, and operate today.
