In April of 2001, the president of MIT, Charles Vest, announced the establishment of a project for placing MIT course contents on the Web for free access by anyone with an Internet connection. In effect, this announcement started the OpenCourseWare (OCW) movement. Since that time, open educational resources (OER) and more recently massive open online courses (MOOCs) have proliferated. A flurry of research reports, books, programs, announcements, debates, and conferences related to MOOCs and open education have encouraged educators to reflect on how these new forms of educational delivery might enhance or even transform education. As part of this global movement, the four editors of this special issue, Mimi Lee, Curt Bonk, Tom Reynolds, and Tom Reeves, organized a one-day preconference symposium on this topic at the International E-Learn Conference in Las Vegas in October 2013. One direct result of that event is this special issue of the International Journal on E-Learning (IJEL), which contains highly informative and important papers related to the present and future of MOOCs and Open Education around the globe.

"The Brill Dictionary of Ancient Greek" is also available online and as a two-volume boxed set. "The Brill Dictionary of Ancient Greek" is the English translation of Franco Montanari's "Vocabolario della Lingua Greca." With an established reputation as the most important modern dictionary for Ancient Greek, it brings together 140,000 headwords taken from the literature, papyri, inscriptions and other sources of the archaic period up to the 6th Century CE, and occasionally beyond. "The Brill Dictionary of Ancient Greek" is an invaluable companion for the study of Classics and Ancient Greek, for beginning students and advanced scholars alike. Translated and edited under the auspices of The Center for Hellenic Studies in Washington, DC, "The Brill Dictionary of Ancient Greek" is based on the completely revised 3rd Italian edition published in 2013 by Loescher Editore, Torino.

Features The principal parts of some 15,000 verbs are listed directly following the entry and its etymology. For each of these forms, the occurrence in the ancient texts has been certified. When found only once, the location is cited. Nearly all entries include citations from the texts with careful mention of the source. The dictionary is especially rich in personal names rechecked against the sources for the 3rd Italian edition, and in scientific terms, which have been categorized according to discipline. Each entry has a clear structure and typography making it easy to navigate. "For a number of years now, scholars at ease in Italian have benefitted enormously from the riches, layout, concision, and accuracy of Professor Montanari's "Vocabolario della Lingua Greca," with its added advantage of the inclusion of names. Hence classicists in general will welcome the English version of this very valuable resource." Professor Richard Janko, "University of Michigan" Franco Montanari is a giant in our field, and his Dictionary is a major leap forward for us. Professor Gregory Nagy, "Harvard University"

Recently, technology and aging have been key research areas in human cognition. The Research Topic "Digital Skills and Life-long Learning: Digital Learning as a New Insight of Enhanced Learning by the Innovative Approach Joining Technology and Cognition" investigated technology's impact on cognitive and intellectual processes, highlighting how intensively technology can change and/or enhance the cognitive functioning throughout one's lifespan. The aim of this Research Topic was to provide an outlook through multidisciplinary research and development while addressing the dynamic intersection of cognition, mind, and technology. Our scope was 1) to favor the cognitive technology debate, 2) to overcome the dichotomies of technology and psychology, 3) to emphasize the advances in knowledge and well-being. This Research Topic comprises review studies and original articles, focused on digital skills that enhance human potential. Transversal approaches and cross-sectorial analysis were encouraged, leading to investigation areas related to cognitive and mental processing—in educational, rehabilitation, clinical settings—across aging. Articles of high relevance to the Research Topic were submitted on the subjects of a) research in human performance and human factors, b) new research and technologies addressing the needs of a growing populace, and c) cognitive aging and cognitive rehabilitation research.

The definitive Gaelic-English anthology of medieval Scottish verse: an annotated treasure trove of literary history spanning a millennium. *Duanaire na Sracaire*—or Songbook of the Pillagers—is the first anthology to bring together Scotland's Gaelic poetry from c.600-1600 AD, a time when Scotland shared its rich culture with Ireland. It includes a huge range of diverse poetry: prayers and hymns of Iona, Fenian lays, praise poems and satires, courtly songs and lewd rants, songs of battle and death, incantations and love poems. All poems appear with facing-page translations which capture the spirit and beauty of the originals and are accompanied by detailed notes. A comprehensive introduction sets the context and analyses the role and functions of poetry in Gaelic society. This collection will appeal to poetry lovers, Gaelic speakers and those keen to explore a vital part of Scotland's literary heritage.

*The HyperDoc Handbook* Penguin  
This elegantly written book explores the history of ideas in Europe from the revolutions of 1848 to the beginning of the First World War. Broader than a straight survey, deeper and richer than a textbook, this work seeks to place the reader in the position of an informed eavesdropper on the intellectual conversations of the past. J. W. Burrow first outlines the intellectual context of the mid-nineteenth century, using ideas taken from physics, social evolution, and social Darwinism, and anxieties about modernity and personal identity, to explore the impact of science and social thought on European intellectual life. The discussion encompasses powerful and fashionable concepts in evolution, art, myth, the occult, and the unconscious mind; the rise of the great cities of Berlin, Paris, and London; and the work of literary writers, philosophers, and composers. Most of the great intellectual figures of the age—and many of the lesser known—populate the book, among them Mill, Bakunin, Nietzsche, Bergson, Renan, Pater, Proust, Clough, Flaubert, Wagner, and Wilde. The author wears his erudition lightly, and this distinguished book will be both entertaining and accessible to scholars, students, and general readers alike.

This volume comprises nine contributions that were written by up-and-coming corpus-based researchers with varied areas of expertise, who were all disciples of Douglas Biber sometime in the past two decades. These papers cover a wide variety of linguistic analyses and describe the principles of the Flagstaff school: a careful procedure for language corpora collection with special consideration for corpus size, representativeness, sampling and systematic analysis; the use of computer programming abilities that allow the posing of corpus-based research questions never asked before; and a strong emphasis on the combination of quantitative methods based on sound and innovative statistical procedures complemented with

comprehensive qualitative functional analyses of the language. This volume has been edited in honor of Douglas Biber, a pioneer of the American school of corpus-based research.

CLIL (Content and Language Integrated Learning) has emerged since the millennium as a major trend in education. Written by Do Coyle, Philip Hood and David Marsh and drawing on their experience of CLIL in secondary schools, primary schools and English language schools across Europe, this book gives a comprehensive overview of CLIL. It summarises the theory which underpins the teaching of a content subject through another language and discusses its practical application, outlining the key directions for the development of research and practice. This book acknowledges the uncertainty many teachers feel about CLIL, because of the requirement for both language and subject knowledge, while providing theoretical and practical routes towards successful practice for all.

With the success of open access publishing, Massive open online courses (MOOCs) and open education practices, the open approach to education has moved from the periphery to the mainstream. This marks a moment of victory for the open education movement, but at the same time the real battle for the direction of openness begins. As with the green movement, openness now has a market value and is subject to new tensions, such as venture capitalists funding MOOC companies. This is a crucial time for determining the future direction of open education. In this volume, Martin Weller examines four key areas that have been central to the developments within open education: open access, MOOCs, open education resources and open scholarship. Exploring the tensions within these key arenas, he argues that ownership over the future direction of openness is significant to all of those with an interest in education.

We analyze the employment effects of financial shocks using a rich data set of job contracts, matched with the universe of firms and their lending banks in one Italian region. To isolate the effect of the financial shock we construct a firm-specific time-varying measure of credit supply. The contraction in credit supply explains one fourth of the reduction in employment. This result is concentrated in more levered and less productive firms. Also, the relatively less educated and less skilled workers with temporary contracts are the most affected. Our results are consistent with the cleansing role of financial shocks.
