The Crisis That Rocked
a Country and a
Company... In April
2004, an illegally

leaked U.S. Army
report thrust CACI, an
information technology
company, into the
international spotlight
by casting suspicion on
a CACI employee for
being "either directly
or indirectly
responsible" for the

mistreatment of detainees at Abu Ghraib prison in Iraq. At the same time, pictures from the abuses were shown on national television and tarnished anyone associated with Abu Ghraib--including CACI. What ensued was a media frenzy rarely seen by any company in recent decades. The media twisted the unsupported allegations into a guilty verdict without regard for the facts or the truth, creating a damning public perception of CACI. Our Good Name recounts how CACI battled to defend itself against erroneous and malicious reports by a rampaging media, how it responded to the wide-ranging government investigations, and

how it overcame misplaced anger and criticism that put the company's dedicated employees and excellent reputation--even its future--at risk. Our Good Name is CACI's story of facing one of the biggest scandals in recent history...and coming out honorably with its head high.

The digital transformation is in full swing and fundamentally changes how we live, work, and communicate with each other. From retail to finance, many industries see an inflow of new technologies, disruption through innovative platform business models, and employees struggling to cope with the significant shifts occurring. This Fourth Industrial Revolution is predicted to also transform Logistics and Supply Chain Management, with delivery systems becoming automated, smart networks created everywhere, and data being collected and analyzed universally. The Digital Transformation of Logistics: Demystifying Impacts of the Fourth

Industrial Revolution provides a holistic overview of this vital subject clouded by buzz, hype, and misinformation. The book is divided into three themed-sections: Technologies such as self-driving cars or virtual reality are not only electrifying science fiction lovers anymore, but are also increasingly presented as cure-all remedies to supply chain challenges. In The Digital Transformation of Logistics: Demystifying Impacts of the Fourth Industrial Revolution, the authors peel back the layers of excitement that have grown around new technologies such as the Internet of Things (IoT), 3D printing, Robotic Process Automation (RPA), Blockchain or Cloud

computing, and show use cases that give a glimpse about the fascinating future we can expect. Platforms that allow businesses to centrally acquire and manage their logistics services disrupt an industry that has been relationship-based for centuries. The authors discuss smart contracts, which are one of the most exciting applications of Blockchain, Software as a Service (SaaS) offerings for freight procurement, where numerous data sources can be integrated and decision-making processes automated, and marine terminal operating systems as an integral node for shipments. In *The Digital Transformation of Logistics: Demystifying Impacts of the Fourth Industrial*

Revolution, insights are shared into the cold chain industry where companies respond to increasing quality demands, and how European governments are innovatively responding to challenges of cross-border eCommerce. People are a vital element of the digital transformation and must be on board to drive change. *The Digital Transformation of Logistics: Demystifying Impacts of the Fourth Industrial Revolution* explains how executives can create sustainable impact and how competencies can be managed in the digital age - especially for sales executives who require urgent upskilling to remain relevant. Best practices are shared for

organizational culture change, drawing on studies among senior leaders from the US, Singapore, Thailand, and Australia, and for managing strategic alliances with logistics service providers to offset risks and create cross-functional, cross-company transparency. The Digital Transformation of Logistics: Demystifying Impacts of the Fourth Industrial Revolution provides realistic insights, a ready-to-use knowledge base, and a working vocabulary about current activities and emerging trends of the Logistics industry. Intended readers are supply chain professionals working for manufacturing, trading, and freight forwarding companies as well as students and all interested parties.

Emergencies and disaster situations are harsh testing grounds for the logistical and organisational capacity of affected countries, and this is especially true in the health sector. The acquisition, storage, mobilisation and distribution of drugs and pharmaceutical supplies to the victims of a disaster require efficient handling and use of resources. This publication provides guidelines for authorities and organisations for the management of planning for disasters, and underlines the fact that each step in the supply chain should be seen as a critical and interrelated link. The techniques and procedures proposed

are multi-sectoral in nature and can be used in any type of emergency operation.

Bribery by international firms in OECD countries is more pervasive in public procurement than in the utilities, taxation or judicial sectors. Whilst most international efforts to fight corruption have focused exclusively on the bidding process, recent corruption scandals have highlighted grey areas throughout the whole public procurement cycle, including in needs assessment and contract management. This publication draws on the experience of procurement practitioners as well as audit, competition and anti-corruption specialists, and sets out a comparative overview of practices designed to enhance integrity throughout the whole procurement

cycle, with examples from OECD and non-OECD countries. Computerworld Government Printing Office Report presents a series of analyses and recommendations for fostering the role of culture for sustainable development. Drawing on a global survey implemented with nine regional partners and insights from scholars, NGOs and urban thinkers, the report offers a global overview of urban heritage safeguarding, conservation and management, as well as the promotion of cultural and creative industries, highlighting their role as resources for sustainable urban development. Report is intended as a policy framework document to support

governments in the implementation of the 2030 Agenda for Sustainable Urban Development and the New Urban Agenda.
