Then, you can go through the User Guide for more details. You can check the Velocity Template Language (VTL) reference to write templates, and the Developer Guide to guide you in the process of configuring and integrating Velocity.**Apache Velocity Engine****Apache Velocity Engine - Developer Guide** Velocity is a Java-based templating engine. It's an open-source web framework designed to be used as a view

component in the MVC architecture, and it provides an alternative to some existing technologies such as JSP. Apache Velocity Developer Guide - atcloud.com In Velocity, there are three sources for variables, searched in a specific order. The value stack. The action context. Built-in variables. Since the action context is resolved after the value stack, you can reference the variable without the typical preceding marker (#) that has to be used with the JSP `s:property` tag. Omitting the marker can be convenient, but it can also trip you up, if used carelessly. Velocity - Apache Struts 1 In this tutorial, we will learn how to use Apache Velocity to build web applications. In order to use Velocity in a web application, we will need a servlet or servlet-based framework. The easiest way to get started is with `VelocityViewServlet` in the Velocity Tools subproject. Tools and technologies used Apache Velocity Tutorial - Java Guides Apache Velocity Engine - Developer Guide The Velocity Users Guide is intended to help page designers and content providers get acquainted with Velocity and the syntax of its simple yet powerful scripting language, the Velocity Template Language (VTL). Many of the examples in this guide deal with using Velocity to embed dynamic content in web sites, but all examples are equally applicable Velocity Users Guide - Apache Click Apache Velocity Guide - u1.sparksolutions.co Velocity tags are extensions of the generic Struts Tags provided by the framework. You can get jump right in just by knowing the structure in which the tags can be accessed: `#s<tag> (...)`, where tag is any of the Struts Tags supported by the framework. For example, in JSP you might create a form using Struts tags. Velocity Tags - struts.apache.org NOTE: Apache Hive recommends that custom `ObjectInspectors` created for use with custom `SerDes` have a no-argument constructor in addition to their normal constructors for serialization purposes. See HIVE-5380 for more details. Registration of Native `SerDes`. As of Hive 0.14 a registration mechanism has been introduced for native Hive `SerDes`.
