The Great American Icon!

- Special Launch Price

American car companies are continually striving to innovate changes in how we see, operate, and make connections with cars. The classic car market taps into a simpler time and invokes a feeling of nostalgia. Mustangs are undoubtedly among the

most popular classic cars- they were a hit right off the production line, and 56 years later, they still rank among the top-selling cars and are recognized as a household name. Ford's first pony car remains one of the longest-running sports car nameplates in the United States, second only to the Chevy Corvette. The Mustang has set records time and again with its sales, building on its reputation as the classic car that made its way to American homes. These milestones helped perpetuate the nostalgic standing that

draws people to the pony car. The Mustang has left an imprint on the hearts and minds of many Americans, whether it was a memorable first car experience, the project car that brought people together, or memories created while cruising, parking, or doing burn-outs. It appeals to consumers for other reasons too. At its inception, the Mustang brought a race-care level of performance and speed to the average American. While suburbia was enjoying upward mobility, car lovers were introduced to an

affordable sports car that was also easy to work on. Those defining characteristics-accessible, fast, and affordable-continue to shape Ford's marketing strategy to this day. The Mustang's performance is wrapped up in the ideals of American individualism. A variety of appealing and performance-enhancing trim options from the factory, plus an endless supply of after-market parts, ensure that you can modify and customize to your heart's content. Whether it's the performance you are after, sentiment, or just an affordable sports car, the Ford Mustang surely fits the bill. The array of Mustangs produced in its lifetime via creative collaborations, advertising promotions, fan-club upgrades, and even Ford's own special projects are too numerous to detail in a single publication. Anyone, from the most fervent enthusiasts to Camaro owners can appreciate this fun collection of Mustang morsels. Or if your intent is to impress your next date or occupy time on the porcelain throne, we hope you enjoy this trivia book! Click "Buy Now" To Get Your Copy Today!

Mathematics for Business & Consumers, Brief Edition Complete Book

This book provides holistic insights into management of protected areas across East Asia and identifies current trends in mountain tourism within the broader field of human geography and nature conservation. The book describes the diversification in visitors and expanding protected areas territories in different Asian countries during recent years. It also compares protected areas networks in the context of the changing demographic profiles of visitors and provides an interdisciplinary transnational appraisal of mountain-based tourism in Asia based on national and international statistics. The research combines specific case studies at the individual country and destination level with trans-regional trends, thereby offering analysis from both the perspective of supply (parks, protected areas, and stakeholders) and demand (mountain tourist market trends and segments). The book is a useful resource for students and academics in tourism and protected areas studies as well as

social scientists and policy-makers interested in Asian countries.

Of the legendary names in the history of the Ford Mustang, one stands apart: Boss. Originally created to homologate the new Boss 302 engine for SCCA Trans-Am racing, the Boss 302 Mustang was built in limited numbers for the street. Designed by legend Larry Shinoda, the Boss cars were easily distinguished from their less potent stable mates by their unique front and rear spoilers, rear window slats, and the omission of the standard Mustang's (fake) rear fender brake ducts. Also standard was a shaker hood scoop and bold graphics. Though Mustang performance faded to all-time lows as the 1970s rolled on, there was good news on the way. The pairing of the venerable 302 Windsor engine with the new Fox-body platform for the 1979 Mustang might not have seemed significant at the time, but it was the first edition of what would become a performance institution in the late 20th century: the 5-liter Mustang was an

overwhelming force on the streets and tracks through the end of its production in 1995. With no small amount of fanfare, Ford is paying homage to its performance past with the re-introduction of the 5.0 liter powerplant in the Mustang GT for 2011.

The story of Kar-Kraft began, as did many others in the automotive industry, with an axe to grind. In 1963, Ford was seriously interested in purchasing Ferrari. Ferrari was a legendary brand with considerable success in racing, and Ford saw the acquisition as a great way to be instantly successful in the racing arena. When Enzo Ferrari realized that Ford would not give him complete control of the racing program, he backed out of the deal late in the process. Ford had spent millions in vetting and audits, which then set in motion a vengeful response against Ferrari. The result was the unthinkable: Ford beat Ferrari at Le Mans. Ford wanted to become competitive quickly, but it did not have the race history or resources in

house. To remedy the situation, Ford searched the U.K. for an independent company to help accelerate its race car development. It first settled on Lola Cars and set up Ford Advanced Vehicles. Later, Ford brought its LeMans effort to the U.S. and the Kar-Kraft relationship was established. Although Kar-Kraft was technically an independent company, it really only had one customer: Ford Special Vehicles. Kar-Kraft's story doesn't begin and end with the GT 40 that took the win away from Ferrari at Le Mans. Ford expanded upon the program and organized an all-out assault on racing in general. Cars were prepared for Trans-Am, NASCAR, NHRA, and Can-Am competition. Street versions of the Boss 429 were assembled under its roof. And fabled prototypes including the LID Mustang, Boss 302 Maverick, and Mach 2C were all assembled in Ford's contracted race shop. And then, out of the blue, its doors closed for good on a cold day in 1970. History tells us that Ford won Le Mans, the Daytona 500, and the Trans-Am championship. But it doesn't tell us how this was accomplished.

Author Charlie Henry (a former Kar-Kraft employee) has enlisted the help of many of his former co-workers to bring you the very first book ever published on Ford's all-encompassing special projects facility, Kar-Kraft. p.p1 {margin: 0.0px 0.0px 0.0px 0.0px; font: 12.0px Arial}

 There were Mustangs, and then there were Mustangs. Ford wanted its new little Pony Car to appeal to the masses, and in executing that plan, the Mustang could be had in anything from a plain-Jane version with an economical 6-cylinder engine (often referred to as a "secretary's car"), all the way up to the sporty GT models with optional 271-hp V-8s. Unfortunately, although road-going Mustangs were considered sporty, they were not officially sports cars, at least according to the Sports Car Club of America (SCCA). And Lee Iacocca knew that on-track performance led to showroom performance, so he needed to go racing. Enter Carroll Shelby. Shelby worked with the SCCA to modify the Mustang to meet the SCCA's requirements and enter the racing arena. The result was the now-

legendary Shelby Mustang. This volume of CarTech's In Detail series covers the 1968 Shelby GT350, GT500, and GT500KR. In 1968, Ford sought to take over much of the process of producing Shelby Mustangs and increased that production dramatically to meet anticipated sales demand, so it was a bit of a transition year. In an effort to appeal to muscle car fans rather than race fans, the cars were losing their edgy race car feel and were becoming more high-end performance road cars with a long list of performance and comfort options including 428 Cobra Jet Engines, automatic transmissions, and air conditioning. They may have no longer been sports cars, but they were now fantastic muscle cars. As in all In Detail Series books, you get an introduction and historical overview, an explanation of the design and concepts involved in creating the car, a look at marketing and promotion, and an in-depth study of all hardware and available options, as well as an examination of where the car is on the market today. Also included is an appendix of paint and option codes, VIN and

build tag decoders, as well as production numbers.

This book covers the P/F-51 Mustang and each of its many variants and spin-offs including the A-36 Apache, F-6 Photo Mustang, F-82 Twin Mustang and others. It discusses the Mustangs used by all US allies and friends in many foreign air forces. Also, it adds to the story of its creation through the wise choices made by the British government and its Royal Air Force, especially the transition from its original Alison V-12 to the wizard-like Rolls-Royce V-12 called the Merlin. The book will be profusely illustrated with high quality mono and colour images, many of which have not been published before, and features beautifully drawn profiles and numerous appendices. It also features numerous first-hand accounts of the Mustang in battle during World War 2, the Korean War and other conflicts. The Mustang was employed by more than 55 nations during its military lifetime and this book is a definitive work on this fabulous war horse.

The "insightful [and] even-handed" (Outside) story of a heroic animal

whose existence is in danger. The wild horse, popularly known as the mustang, is so ingrained in the American imagination that even those who have never seen one know what it stands for: freedom, independence, the bedrock ideals of the nation. But in modern times it has become entangled in controversy and bureaucratic mismanagement, and now its future is imperiled. In *Wild Horse Country*, Pulitzer Prize-winning New York Times reporter David Philipps traces the rich history of wild horses in America and investigates the shocking dilemma they pose in our own time.

This new volume straps the reader into the cockpit of the P-51B/C as the Mustang-equipped fighter groups of the 'Mighty Eighth' Air Force attempt to defend massed heavy bomber formations from deadly Luftwaffe fighters charged with defending the Third Reich. Luftwaffe Reichsmarschall Hermann Göring admitted that the appearance of long-range Mustangs over Berlin spelled the end of

the Jagdwaffe's ability to defeat American daylight bombing. But the Mustang was far more than an escort – it was a deadly hunter that could outperform nearly every German fighter when it was introduced into combat. Entering combat in Europe in December 1943, P-51Bs and P-51Cs had advantages over German Bf 109s and Fw 190s in respect to the altitude they could reach, their rate of climb and top speed. Initially tapped for close bomber escort, Mustangs were quickly turned loose to range ahead of the bomber stream in order to challenge German fighters before they could assemble to engage the bombers en masse.

Thanks to the Mustang's superior performance, USAAF pilots effectively blunted the Luftwaffe's tried and tested tactic for destroying B-17s and B-24s. Boldness and aggression in aerial combat meant that P-51B/C pilots inflicted a rapidly mounting toll on their German counterparts in the West during the early months of 1944, contributing mightily to Allied air superiority over northern France on D-Day. This volume, packed full of

first-hand accounts, expertly recreates the combat conditions and flying realities for Mustang pilots (including headline aces such as Don Blakeslee and Don Gentile, as well as lesser known aviators). It is heavily illustrated with photographs, artwork and innovative and colourful 3D ribbon diagrams, which will provide a realistic overview of the most dynamic dogfights in aviation history.

Second Generation Cell and Gene-Based Therapies: Biological Advances, Clinical Outcomes, and Strategies for Capitalisation serves as the only volume to the market to bridge basic science, clinical therapy, technology development, and business in the field of cellular therapy/cytotherapy. After more than two decades of painstaking fundamental research, the concept of therapeutic cells (stem cells, genes, etc.), beyond the concept of vaccines, is reaching clinical trial, with mounting confidence in the safety and efficacy of these products. Nonetheless, numerous incremental technical advances remain to be

achieved. Thus, this volume highlights the possible R&D paths, which will ultimately facilitate clinical delivery of cutting edge curative products. The next waves of innovation are reviewed in depth for hematopoietic stem cells, mesenchymal stem cells, tissue engineering, CAR-T cells, and cells of the immune system, as well as for enabling technologies such as gene and genome editing. Additionally, deep dives in product fundamentals, history of science, pathobiology of diseases, scientific and technological bases, and financing and technology adoption constraints are taken to unravel what will shape the cytotherapy industry to the horizon 2025 and beyond. The outcome is not simply a scientific book, but a global perspective on the nascent field combining science, business, and strategic fundamentals. Helps readers learn about the most current trends in cell-based therapy, their overall effectiveness from a clinical prospective, and how the industry is moving therapies forward for capitalization "Perspectives" section at the end of each chapter summarizes key learnings, hypotheses,

and objectives highlighted and combines scientific and business insights Edited and authored by scientists representing both basic and clinical research and industry, presenting a complete story of the current state and future promise of cellular therapies Transportation Energy Data Book Fonthill Media NATIONAL BESTSELLER A top journalist crosses the yellow tape to investigate a shocking high-society crime. Billionaires, philanthropists, socialites . . . victims. Barry and Honey Sherman appeared to lead charmed lives. But the world was shocked in late 2017 when their bodies were found in a bizarre tableau in their elegant Toronto home. First described as murder-suicide — belts looped around their necks, they were found seated beside their basement swimming pool — police later ruled it a staged, targeted double murder. Nothing about the case made sense to friends of the founder of one of the world's largest generic pharmaceutical firms and his wife, a powerhouse in Canada's charity world. Together, their wealth has been estimated at well over \$4.7 billion. There was another side to the story.

A strategic genius who built a large generic drug company — Apotex Inc. — Barry Sherman was a self-described workaholic, renowned risk-taker, and disruptor during his fifty-year career. Regarded as a generous friend by many, Sherman was also feared by others. He was criticized for stifling academic freedom and using the courts to win at all costs. Upset with building issues at his mansion, he sued and recouped millions from tradespeople. At the time of his death, Sherman had just won a decades-old legal case involving four cousins who wanted 20 percent of his fortune. Toronto Star investigative journalist Kevin Donovan chronicles the unsettling story from the beginning, interviewing family members, friends, and colleagues, and sheds new light on the Shermans' lives and the disturbing double murder. Deeply researched and authoritative, *The Billionaire Murders* is a compulsively readable tale of a strange and perplexing crime. *Automotive News* Houghton Mifflin Harcourt Since their introduction in 1964, American muscle cars have been closely associated with

masculinity. In the 21st century, women have been a growing presence in the muscle car world, exhibiting classic cars at automotive events and rumbling to work in modern Mustangs, Camaros and Challengers. Informed by the experiences of 88 female auto enthusiasts, this book highlights women's admiration and passion for American muscle, and reveals how restoring, showing and driving classic and modern cars provides a means to challenge longstanding perceptions of women drivers and advance ideas of identity and gender equality.

Women at the Wheel shows how stereotypes of women as uninterested in automobiles and, more perniciously, as poor drivers, has little basis in historical reality.

However, Katherine J. Parkin argues that in American culture women are still considered imposters when they are at the wheel.
