International Protection of Investments Oxford University Press

Investment treaties are some of the most controversial but least understood instruments of global economic governance. Public interest in international investment arbitration is growing and some developed and developing countries are beginning to revisit their investment treaty policies. The Political Economy of the Investment Treaty Regime synthesises and advances the growing literature on this subject by integrating legal, economic, and political perspectives. Based on an analysis of the substantive and procedural rights conferred by investment treaties, it asks four basic questions. What are the costs and benefits of investment treaties for investors, states, and other stakeholders? Why did developed and developing countries sign the treaties? Why should private arbitrators be allowed to review public regulations passed by states? And what is the relationship between the investment treaty regime and the broader regime complex that governs international investment? Through a concise, but comprehensive, analysis, this book fills in some of the many "blind spots" of academics from different disciplines, and is the first port of call for lawyers, investors, policy-makers, and stakeholders trying to make sense of these critical instruments governing investor-state relations.

Does a right to property exist under international law? The traditional answer to this question is no: a right to property can only arise under the domestic law of a particular nation. But the view that property rights are exclusively governed by national law is obsolete. Identifiable areas of property law have emerged at the international level, and the foundation is now arguably being laid for a comprehensive international regime. This book provides a detailed investigation into this developing international property law. It demonstrates how the evolution of international property law has been

influenced by major economic, political, and technological changes: the embrace of private property by former socialist states after the end of the Cold War; the globalization of trade; the birth of new technologies capable of exploiting the global commons; the rise of digital property; and the increasing recognition of the human right to property. The first part of the book analyzes how international law impacts rights in specific types of property. In some situations, international law creates property rights, such as rights in aboriginal lands, deep seabed minerals, and satellite orbits. In other areas, it harmonizes property rights that arise at the national level, such as rights in intellectual property, rights in foreign investments, and security interests in personal property. Finally, it restricts property rights that may be recognized at the national level, such as rights in celestial bodies, contraband, and slaves. The second part of the book explores the thesis that a global right to property should be recognized as a general matter, not merely as a moral precept but rather as an entitlement that all nations must honour. It establishes the components of such a right, arguing that the right to property at the international level should be seen in the context of five key components of ownership: acquisition, use, destruction, exclusion, and transfer. This highly innovative book makes an important contribution to how we conceptualize the protection of property and to the understanding that much of this protection now takes place at the international level.

Investments in Conflict Zones' addresses the topical and underexplored role of international investment law in armed conflicts, disputed territories, and 'frozen' conflicts. The edited collection explores how these different conflict situations impact the application and interpretation of international investment law and how the protection of investors can be reconciled with the politically charged circumstances and state interests involved. Written by a selected group of experts from different fields of international law, the volume moves beyond the confines of investment law, offering novel insights on its intersection with the law of armed conflict, human rights law, the law of the sea, general international law and national laws, including those adopted by de facto regimes which lack recognition as states.

International Investment Law for the 21st Century Cambridge University Press

This book examines the history, principles, and practice of awarding compensation and restitution in investor-State arbitration disputes, which are initiated under investment treaties. The principles discussed may be applied to all international law cases where damage to property is an issue. The book starts by tracing the roots of the applicable international legal principles to Roman law, and from there follows their evolution through the European law of extra-contractual liability and

eventually through the Chorzów Factory case to principles of compensation and restitution in the modern law of international investment. The greater part of the book is then dedicated to examination of the modern application of these principles, focusing on the jurisprudence of international tribunals under various arbitral rules such as ICSID and UNCITRAL Rules. Monetary compensation as the prevalent form of remedy sought and awarded in investor-State disputes is discussed in more detail, including topics such as the amount of compensation for damage resulting from breach of investment treaties or for lawful expropriation of foreign investor's property, a brief overview of valuation methods, supplementary compensation for moral damages, interest, costs, and currency fluctuations as well as various principles that may limit the amount of recoverable compensation, such as causation. A full chapter is dedicated to the discussion of the theory and practice of awarding restitution in investor-State disputes. The book also covers the general principle of reparation in international law as applied in investor-State arbitrations. The topics discussed cover all the theoretical as well as practical issues which may be raised in awarding compensation and restitution in investment treaty disputes between States and foreign investors.

Governments are rightly discussing reform of investment treaties, and of the incredibly powerful system of 'investor-state dispute settlement' (ISDS) upon which they rest. At their core, ISDS treaties are flawed because they very firmly institute wealth-based inequality under international law. In this book, Van Harten explores these claims in the light of the history of early ISDS treaties showing their ties to decolonization and, at times, extreme violence and authoritarianism. Focusing on early ISDS lawsuits and rulings, it is revealed how a small group of lawyers and arbitrators worked to create the legal foundations for massive growth of ISDS since 2000. ISDS-based protections are examined in detail to demonstrate how they give exceptional advantages to the wealthy. Various examples are also offered of how the protections have been used to reconfigure state decision-making and shift sovereign minds in favour of foreign investors. Lastly, the ongoing efforts of governments to reform ISDS are surveyed, with a call to go further or, best of all, to withdraw from the treaties. This book is essential reading for anyone wanting to know more about the shady world of investment protection.

This book outlines the protection standards typically contained in international investment agreements as they are actually applied and interpreted by investment tribunals. It thus provides a basis for analysis, criticism, and stocktaking of the existing system of investment arbitration. It covers all main protection standards, such as expropriation, fair and equitable treatment, full protection and security, the non-discrimination standards of national treatment and MFN, the prohibition of unreasonable and discriminatory measures, umbrella clauses and transfer guarantees. These standards are covered in separate chapters providing an overview of textual variations,

explaining the origin of the standards and analysing the main conceptual issues as developed by investment tribunals. Relevant cases with quotations that illustrate how tribunals have relied upon the standards are presented in depth. An extensive bibliography guides the reader to more specific aspects of each investment standard permitting the book's use as a commentary of the main investment protection standards.

"As the book clearly explains, there are situations in which questions of contract law need to be examined by investment tribunals - mainly as preliminary or incidental questions, to determine issues such as contract liability or breach of contract, that in turn are assumed as a basis for the issues of investment law in dispute"--

International Investment Law OUP Oxford

The rapid growth in investment treaties has led to a burgeoning number of international arbitration decisions that have applied and interpreted treaty provisions in disputes between investors and states concerning their respective rights. This flurry of treaties and arbitral decisions has seen the creation of a new branch of international law- the law of investment claims. In this revised edition, Jeswald Salacuse examines the law of international investment treaties, specifically in relation to its origins, structure, content, and effect, as well as their impact on international investors and investments, and the governments that are parties to them. Investment treaty law is a rapidly

evolving field and since publication of the first edition, the law of international investment treaties has both experienced considerable growth and generated extensive controversy. 2011 saw the highest number of new treaty-based arbitration filed under international investment agreements to date, and in July 2014, the Yukos Universal Limited (Isle of Man) v The Russian Federation culminated with awards of over US\$50 billion; a historic record for any arbitration. Controversy in this field has primarily revolved around the investor-state dispute settlement process, which as thus far involved at least 98 states as respondents. Salacuse captures these developments in this updated edition, examining not only the significant growth in treaties, but the trends that have followed, and their effect on the content and evolution of the law of investment treaties. Specific topics include conditions for the entry of foreign investment and general standards of treatment of foreign investments; monetary transfers; operational conditions; protection against expropriation; dispossession and compensation for losses; dispute settlement, including negotiation, arbitration, and conciliation; and judicial proceedings.

The Prohibition of Propaganda for War in International Law BRILL

Cassese's International Law is a new edition of an established classic. Authors Gaeta, Villalobos, and Zappalà have built on the legacy of international law luminary Antonio Cassese to offer a thought-provoking and lucid account for today's undergraduates and postgraduates. The authors have refreshed Cassese's original approach, ensuring the book continues to compare the traditional legal position with the developing and evolving law. Advancing areas such as the law of the sea, territorial matters, and international environmental law have been expanded to give proper place to their evolving development, while brand new chapters on international trade and foreign investment have been written to reflect the advancements of these areas. In maintaining the broad structure and approach but providing new material, the authors bring fresh context to Cassese's thinking and provide students with an up-to-date, compelling account of the landscape of international legal thinking.

The Fair and Equitable Treatment Standard in the International Law of Foreign Investment Oxford University Press

Investment treaty arbitration (sometimes called investor-state dispute settlement or ISDS) has become a flashpoint in the backlash against globalization, with costs becoming an area of core scrutiny. Yet "conventional wisdom" about costs is not necessarily wise. To separate fact from

fiction, this book tests claims about investment arbitration and fiscal costs against data so that policy reforms can be informed by scientific evidence. The exercise is critical, as investment treaties grant international arbitrators the power to order states-both rich and poor-to pay potentially millions of dollars to foreign investors when states violate the international law commitments made in the treaties. Meanwhile, the cost to access and defend the arbitration can also climb to millions of dollars. This book uses insights drawn from cognitive psychology and hard data to explore the reality of investment treaty arbitration, identify core demographics and basic information on outcomes, and drill down on the costs of parties' counsel and arbitral tribunals. It offers a nuanced analysis of how and when cost-shifting occurs, parses tribunals' rationalization (or lack thereof) of cost assessments, and models the variables most likely to predict costs, using data to point the way towards evidence-based normative reform. With an intelligent interdisciplinary approach that speaks to ongoing reform at entities like the World Bank's ICSID and UNCITRAL, this book provides the most up-to-date study of investment treaty dispute settlement, offering new insights that will shape the direction of investment treaty and arbitration reform more broadly.

Prospects in International Investment Law and Policy Edward Elgar Publishing

'...This book [...] goes beyond stating what the law is and focuses on controversies occurring within this area of the law... an excellent introduction to this complex area of international law for newcomers to the subject' Kate Miles, Australian International Law Journal The updated edition of this acclaimed book offers a critical overview of the law of foreign investment, incorporating a thorough analysis of the principles and standards of treatment available to foreign investors in international law. It is authoritative and multi-layered, offering an analysis of the key issues and an insightful assessment of recent trends in the case law, from both developed and developing country perspectives. A major feature of the book is that it deals with the tension between the law of foreign investment and other competing principles of international law. In doing so, it proposes ways of achieving a balance between these principles and the need to protect the legitimate rights and expectations of foreign investors on the one hand, and the need not to restrict unduly the right of host governments to implement their public policy on the other, including the protection of the environment and human rights, and the promotion of social and economic justice within the host country. Many of the pioneering ideas that were advanced in the first edition of this book in 2008 have been taken up by governments and international organisations in their attempts to reform the investor-State dispute settlement mechanism and strike a balance between different competing principles in developing international investment law. Accordingly, this fourth edition captures the essence of the ongoing multiple reform processes -either planned or envisaged - currently underway.
