### EVELYN MADELYNN

#### Worker Security and the COVID-19 Crisis

Walter de Gruyter  
A Companion to Genetics is the first substantial study of the multifaceted dimensions of the genetic revolution and its philosophical, ethical, social and political significance. Brings together the best and most influential writing about the ethics of genetics; Includes 33 newly-commissioned essays, all written by prominent figures in the field; Shows how there is scarcely a part of our lives left unaffected by the impact of the new genetics.

*Medical Liability in Europe* John Wiley & Sons

This timely book tells the story of the smart technologies that reconstruct our world, by provoking their most salient functionality: the prediction and preemption of our day-to-day activities, preferences, health and credit risks, criminal intent and *Health System Efficiency* Cambridge University Press

The first edition of this book was welcomed with great enthusiasm by teachers and students. It therefore seemed opportune to publish a second, revised, updated and extended edition.

Unfortunately, Professor Félix Serratosa died before he could complete this task. Some new material has been added, the more significant changes being: The book has been restructured into two well-differentiated sections: Part A, dealing with conventional organic synthesis, and Part B, devoted exclusively to computer-assisted organic synthesis and based on the former Chapter 11 and Appendices 2, 3 and 4 of the first edition. As decided in advance, Part B was to be the sole responsibility of Dr. Josep Xicart, who prepared the first versions of the CHAOS (Computerisation and Heuristics Applied to Organic Synthesis) program under the direction of Professor Serratosa.

*How to Make Measurement Matter for Policy and Management* Maklu

What is sensible when it comes to developing and implementing a policy with regard to products which in the case of regular use are harmful, but which at the same time exert a strong attraction, even so strong that people (may) become dependent on or addicted to them? This question relates to many illicit drugs, but these days it is, both nationally and internationally, mainly related to the policy regarding the production, distribution and consumption of cannabis. Generally speaking, the legalization of cannabis in Uruguay and in some states of the United States of America, in particular Colorado and Washington State, has given a powerful impetus to the discussion about the cannabis policy. In the Netherlands, that discussion has become increasingly relevant over the past years because of the struggle of coffeeshop owners and political parties. This volume offers the first English-language analysis of the situation in the Netherlands in order to make a contribution to the international debate on this heated topic. Since the 1960s, the Dutch cannabis policy has been an important point of reference in the international discussion about the policy that should be pursued regarding the use of cannabis. However, in international and foreign literature about cannabis policy the developments in the Netherlands are often depicted in an incomplete or one-sided manner, which has a negative impact on the quality of the international debate about what has happened and what should happen now. This volume seeks to redress that imbalance.

*Report* Elsevier Health Sciences

Describes the state of postwar development policy in Africa that has channeled billions of dollars in aid but failed to either reduce poverty or increase growth, offering a hopeful vision of how to address the problem.

*Social Health Insurance* Amsterdam University Press

The health care system in Canada is much-touted in the international sphere, but often overlooked when it comes to an examination of its actual administration and regulation. *Health Systems in Transition: Canada* provides an objective description and analysis of the public, private, and mixed components that make up health care in Canada today. Published in co-operation with the World Health Organization Regional Office for Europe on behalf of the European Observatory on Health Systems and Policies, Gregory P. Marchildon's study offers a statistical and visual description of the many facets of Canadian health care financing, administration, and service delivery. This study's most distinctive feature is a comparative description and analysis. For international comparison, five other countries have been selected: The United States, Australia, the United Kingdom, France, and Sweden. Because public health care administration

and delivery is highly decentralized in Canada, Marchildon also analyzes the important health status and health care features within Canada by province and territory, and describes in some detail the unique constitutional, jurisdictional, and financial features of the Canadian system. Balancing careful assessment, summary, and illustration, *Health Systems in Transition: Canada* is a thorough and illuminating look at one of the nation's most complex institutions.

*The Welfare State Reader* OECD Publishing

This book examines policy issues in synthetic biology including R&D funding, company investment, PPP arrangements and innovative financing, infrastructure requirements, education and training, intellectual property (IP), regulation, and public engagement.

*Development Policies in a Globalizing World* Elsevier

The Cambridge History of Medicine surveys the rise of medicine in the West from classical times to the present. Covering both the social and scientific history of medicine, this 2006 volume traces the chronology of key developments and events, engaging with the issues, discoveries, and controversies that have characterized medical progress.

*Risk and Reason* International Monetary Fund

Today's medicines are regulated for their efficacy and safety and, once approved, they can be marketed for certain uses as justified by the data. Regulatory bodies in developed countries are constituted by legal statute and operate as parts of government, ostensibly in the interests of the people as patients. But once approved, medicines can be used for any purpose the prescriber thinks fit and appropriate for the patient. One in five prescriptions is therefore written outside regulatory purview. Off-label Prescribing looks into the corners of our medicated lives, where drug regulation runs up against medical practice, and concerns the use of a drug that has been approved for one use (in medical parlance, 'indication') being used for a different indication; alternatively, being used on a different set of patients from the ones it is approved for, or at a different dose. Usually the patient is unaware of what is going on, having not been informed by their doctor of this aspect of his or her prescribing choice. The book examines how and why this occurs, what the various medical professions have to say about it, and how pharmaceutical companies benefit by moving into this poorly regulated area. Off-label Prescribing pulls these complex issues together in one volume, to highlight current practice, its advantages and weaknesses and how the author suggests practice should evolve in the future. It will therefore be of interest to all those who prescribe (and receive) medicines, combined with a greater objective to provide more transparency and discussion for professionals.

*Privacy on the Ground* BRILL

Vital Democracy outlines an innovative new theory of democracy in action.

*Handbook of Developmental Psychopathology* MIT Press

Europe's banking system is weighed down by high levels of non-performing loans (NPLs), which are holding down credit growth and economic activity. This discussion note uses a new survey of European country authorities and banks to examine the structural obstacles that discourage banks from addressing their problem loans. A three-pillared strategy is advocated to remedy the situation, comprising: (i) tightened supervisory policies, (ii) insolvency reforms, and (iii) the development of distressed debt markets.

*The Cambridge History of Medicine* University of Toronto Press

The 2020 edition of the OECD Employment Outlook focuses on worker security and the COVID-19 crisis.

Polity

"This thoughtful and comprehensive book represents the best work I have seen on the current situation concerning medication policies in the EU. It is not just that this is a very up-to-date compendium of facts and data across a wide variety of domains that impact on pharmaceutical regulation. The book is also strong on analysis of those facts as well." Jerry Avorn, Harvard Medical School. "This book offers a comprehensive examination of approaches to manage pharmaceutical expenditures in Europe. It is a must-read for those who seek to understand and navigate the changing regulatory environment for medicines in the European

Union." Bernie O'Brien, McMaster University, Canada. The rising cost of pharmaceutical expenditures in many European countries is of concern to governments required to make effective use of health care budgets. Taking a broad perspective that encompasses institutional, political and supranational aspects of pharmaceutical regulation, this book examines approaches used to manage pharmaceutical expenditure across Europe and what impact these strategies have had on efficiency, quality, equity and cost of pharmaceutical care. *Regulating Pharmaceuticals in Europe* is an important book for students of health policy, regulation and management, and for health managers and policy makers. The editors: Elias Mossialos is Brian Abel-Smith Professor of Health Policy at the London School of Economics and Political Science and a Research Director of the European Observatory on Health Systems and Policies. Monique Mrazek is a Health Economist (Europe and Central Asia region) for the World Bank and formerly a Research Officer in Health Economics for the European Observatory on Health Systems and Policies. Tom Walley is Professor of Clinical Pharmacology at the University of Liverpool and Director of the UK National Health Technology Assessment Programme. Contributors: Julia Abelson, Christa Altenstetter, Vittorio Bertele', Christine Bond, Marcel L. Bouvy, Colin Bradley, Steve Chapman, Anna Dixon, Michael Drummond, Pierre Durieux, Edzard Ernst, Armin Fidler, Eric Fortess, Richard Frank, Silvio Garattini, Leigh Hancher, Ebba Holme Hansen, Steve Hudson, Kees de Jonchere, Panos Kanavos, Sjoerd Kooiker, Jean-Marc Leder, Graham Lewis, Donald W. Light, Alistair McGuire, Elias Mossialos, Monique Mrazek, Maria Pia Orru', Govin Permanand, Guenka Petrova, Munir Pirmohamed, Dennis Ross-Degnan, Frans Rutten, Steven Soummerai, David Taylor, Sarah Thomson, Tom Walley.

Development policies in the globalising world.

*Driving Corporate Behavior in the United States and Europe* Black Rose Books Limited

An examination of corporate privacy management in the United States, Germany, Spain, France, and the United Kingdom, identifying international best practices and making policy recommendations. Barely a week goes by without a new privacy revelation or scandal. Whether by hackers or spy agencies or social networks, violations of our personal information have shaken entire industries, corroded relations among nations, and bred distrust between democratic governments and their citizens. Polls reflect this concern, and show majorities for more, broader, and stricter regulation—to put more laws “on the books.” But there was scant evidence of how well tighter regulation actually worked “on the ground” in changing corporate (or government) behavior—until now. This intensive five-nation study goes inside corporations to examine how the people charged with protecting privacy actually do their work, and what kinds of regulation effectively shape their behavior. And the research yields a surprising result. The countries with more ambiguous regulation—Germany and the United States—had the strongest corporate privacy management practices, despite very different cultural and legal environments. The more rule-bound countries—like France and Spain—trended instead toward compliance processes, not embedded privacy practices. At a crucial time, when Big Data and the Internet of Things are snowballing, *Privacy on the Ground* helpfully searches out the best practices by corporations, provides guidance to policymakers, and offers important lessons for everyone concerned with privacy, now and in the future.

*Nuclear Power Plants and Public Health* Springer Science & Business Media

Ten years after the first ECTIL project in this field, liability for medical malpractice is still a hot topic throughout Europe and it continues to expand and develop. This study compares thirteen European jurisdictions on the basis of country reports authored by renowned experts from each legal system. In addition to

providing a theoretical survey of key issues, contributors analyzed six hypotheticals based on actual cases, thereby also providing practical guidance on major aspects of liability claims.  
*Europees consumentenrecht* National Academies Press  
 Nature of obligations, principles and objectives; Substantive obligations; Intellectual property rights and competition; Enforcement, maintenance and acquisition of rights; Interpretation and dispute settlement and prevention; Transitional and institutional arrangements.

**The Knave of Clubbes** Lulu.com

In this book the authors explore the state of the art on efficiency measurement in health systems and international experts offer insights into the pitfalls and potential associated with various measurement techniques. The authors show that: - The core idea of efficiency is easy to understand in principle - maximizing valued outputs relative to inputs, but is often difficult to make operational in real-life situations - There have been numerous

advances in data collection and availability, as well as innovative methodological approaches that give valuable insights into how efficiently health care is delivered - Our simple analytical framework can facilitate the development and interpretation of efficiency indicators.
