The competitiveness of the global business environment makes it imperative for organizations to make cogent and strategic investment decisions that would assure their survival in the market. Strategic business and investment decisions are a prerequisite for an organization's ability to maintain an edge

over its competitors in the industry. Rapid globalization calls for the broadening of an organization's horizon beyond the local market and industry; rapid globalization calls for investment strategies and decisions that consider foreign competitors, especially when importation and exportation abound in almost every country across the globe. This publication seeks to guide corporate executives in their investment decisions by examining the impact of corporate financial theories and applications on the performance and development of organizations. This book provides useful information on how managers could initiate and complete investment projects successfully. It sheds light on some risks inherent in management functions and the steps that could be taken by organizations to prevent or minimize those risks. Principles of Corporate Finance John Wiley & Sons

1.1 Cash Flow, Risk, Agency, Information, Investments The first volume dealt with the management of: cash flow (and the exchange of goods and services); risk; agency relationships; and information. The firm manages these aspects by legal tools and practices in the context of all commercial transactions. The second volume discussed investments. As

voluntary contracts belong to the most important legal tools available to the firm, the second volume provided an introduction to the general legal aspects of generic investment contracts and payment obligations. This volume discusses funding transactions, exit, and a particular category of decisions raising existential questions (business acquisitions). Transactions which can be regarded as funding transactions from the perspective of a firm raising the funding can be regarded as investment transactions from the perspective of an investor that provides the funding. Although the perspective chosen in this volume is that of a firm raising funding, this volume will simultaneously provide information about the legal aspects of many investment transactions. 1.2 Funding, Exit, Acquisitions Funding transactions are obviously an important way to manage cash flow. All investments will have to be funded in some way or another. The firm's funding mix will also influence risk in many ways. Funding. The most important way to raise funding is through retained profits and by using existing assets more efficiently. The firm can also borrow

money from a bank, or issue debt, equity, or mezzanine securities to a small group of investors.
