In this fascinating book, New Yorker business columnist James Surowiecki explores a deceptively simple idea: Large groups of people are smarter than an elite few, no matter how brilliant—better at solving problems, fostering innovation, coming to wise decisions, even predicting the future. With boundless erudition and in delightfully clear prose, Surowiecki ranges across fields as diverse as popular culture,

psychology, ant  
biology, behavioral  
economics, artificial  
intelligence, military  
history, and politics to  
show how this simple  
idea offers important  
lessons for how we live  
our lives, select our  
leaders, run our  
companies, and think  
about our world.

An analytical investigation into Prime Minister Winston Churchill's decision-making process during every stage of World War II. When Winston Churchill accepted the position of Prime Minister in May 1940, he insisted in also becoming Minister of Defence. This, though, meant that he alone would be responsible for the success or failure of Britain's war effort. It also meant that he would be faced

with many monumental challenges and utterly crucial decisions upon which the fate of Britain and the free world rested. With the limited resources available to the UK, Churchill had to pinpoint where his country's priorities lay. He had to respond to the collapse of France, decide if Britain should adopt a defensive or offensive strategy, choose if Egypt and the war in North Africa should take precedence over Singapore and the UK's empire in the East, determine how much support to give the Soviet Union, and how much power to give the United States in controlling the direction of the war. In this insightful investigation into

Churchill's conduct during the Second World War, Allen Packwood, BA, MPhil (Cantab), FRHistS, the Director of the Churchill Archives Centre, enables the reader to share the agonies and uncertainties faced by Churchill at each crucial stage of the war. How Churchill responded to each challenge is analyzed in great detail and the conclusions Packwood draws are as uncompromising as those made by Britain's wartime leader as he negotiated his country through its darkest days.

World-renowned economist Klaus Schwab, Founder and Executive Chairman of

the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D

printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine “smart factories” in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies

driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.

Exploring how the U.S.

military can move beyond Iraq and Afghanistan. Since the September 11, 2001, attacks, the U.S. military has been fighting incessantly in conflicts around the globe, often with inconclusive results. The legacies of these conflicts have serious implications for how the United States will wage war in the future. Yet there is a stunning lack of introspection about these conflicts. Never in modern U.S. history has the military been at war for so long. And never in U.S. history have such long wars demanded so much of so few. The legacy of wars without end include a military that feels the painful effects of war but often feels alone. The public is less connected to the military now than

at any point in modern U.S. history. The national security apparatus seeks to pivot away from these engagements and to move on to the next threats—notably those emanating from China and Russia. Many young Americans question whether it even makes sense to invest in the military. At best, there are ad hoc, unstructured debates about Iraq or Afghanistan. Simply put, there has been no serious, organized stock-taking by the public, politicians, opinion leaders, or the military itself of this inheritance. Despite being at war for the longest continuous period in its history, the military is woefully unprepared for future wars. But the United States cannot simply

hit the reset button. This book explores this inheritance by examining how nearly two decades of war have influenced civil-military relations, how the military goes to war, how the military wages war, who leads the military and who serves in it, how the military thinks about war, and above all, the enduring impact of these wars on those who waged them. If the U.S. military seeks to win in the future, it must acknowledge and reconcile with the inheritance of its long and inconclusive wars. This book seeks to help them do so.

The masterpiece of the German experience during World War I, considered by many the greatest war novel of all time—with an Oscar-nominated film adaptation now streaming on Netflix.

“[Erich Maria Remarque] is a craftsman of unquestionably first rank.”—The New York Times Book Review

I am young, I am twenty years old; yet I know

nothing of life but despair, death, fear, and fatuous superficiality cast over an abyss of sorrow. . . . This is the testament of Paul Bäumer, who enlists with his classmates in the German army during World War I. They become soldiers with youthful enthusiasm. But the world of duty, culture, and progress they had been taught breaks in pieces under the first bombardment in the trenches.

Through years of vivid horror, Paul holds fast to a single vow: to fight against the principle of hate that meaninglessly pits young men of the same generation but different uniforms against one another . . . if only he can come out of the war alive.

"The ongoing COVID-19 pandemic marks the most significant, singular global disruption since World War II, with health, economic, political, and security implications that will ripple for years to come." -Global Trends 2040 (2021) Global Trends 2040-A More Contested World (2021), released by the US National Intelligence Council, is the latest report in its series of reports starting in 1997 about megatrends and the world's future. This report, strongly influenced by the COVID-19 pandemic, paints a bleak picture of the future and describes a contested, fragmented and turbulent world. It specifically discusses

the four main trends that will shape tomorrow's world: - Demographics-by 2040, 1.4 billion people will be added mostly in Africa and South Asia. - Economics-increased government debt and concentrated economic power will escalate problems for the poor and middleclass. - Climate-a hotter world will increase water, food, and health insecurity. - Technology-the emergence of new technologies could both solve and cause problems for human life. Students of trends, policymakers, entrepreneurs, academics, journalists and anyone eager for a glimpse into the next decades, will find this report, with colored graphs, essential reading.

In the pantheon of air power spokesmen, Giulio Douhet holds center stage. His writings, more often cited than perhaps actually read, appear as excerpts and aphorisms in the writings of numerous other air power spokesmen, advocates and critics. Though a highly controversial figure, the very controversy that surrounds him offers to us a testimonial of the value and depth of his work, and the need for airmen today to become familiar with his thought. The progressive development of air power to the point where, today, it is

more correct to refer to aerospace power has not outdated the notions of Douhet in the slightest. In fact, in many ways, the kinds of technological capabilities that we enjoy as a global air power provider attest to the breadth of his vision. Douhet, together with Hugh “Boom” Trenchard of Great Britain and William “Billy” Mitchell of the United States, is justly recognized as one of the three great spokesmen of the early air power era. This reprint is offered in the spirit of continuing the dialogue that Douhet himself so perceptively began with the first edition of this book, published in 1921. Readers may well find much that they disagree with in this book, but also much

that is of enduring value. The vital necessity of Douhet’s central vision—that command of the air is all important in modern warfare—has been proven throughout the history of wars in this century, from the fighting over the Somme to the air war over Kuwait and Iraq. *Access to History for the IB Diploma: Causes and effects of 20th-century wars Second Edition* Rand Corporation  
No single human invention has transformed war more than the airplane—not even the atomic bomb. Even before the Wright Brothers’ first flight, predictions abounded of the devastating and terrible consequences this new invention would have as an engine of war. Soaring

over the battlefield, the airplane became an unstoppable force that left no spot on earth safe from attack. Drawing on combat memoirs, letters, diaries, archival records, museum collections, and eyewitness accounts by the men who fought—and the men who developed the

breakthrough inventions and concepts—acclaimed author Stephen Budiansky weaves a vivid and dramatic account of the airplane's revolutionary transformation of modern warfare. On the web:
