This hands-on manual from Leigh McCullough and associates teaches the nuts and bolts of practicing short-term dynamic psychotherapy, the research-supported model first presented in *Changing Character*, McCullough's foundational text. Reflecting the ongoing evolution of the approach, the manual emphasizes "affect phobia," or conflict about feelings. It shows how such proven behavioral techniques as systemic desensitization can be applied effectively within a psychodynamic framework, and offers clear guidelines for when and how to intervene. Demonstrated are procedures for assessing patients, formulating core conflicts, and restructuring defenses, affects, and relationship to the self and others. In an easy-to-use, large-size format, the book features a wealth of case examples and write-in exercises for building key clinical skills. The companion website (www.affectphobiatheapy.com) offers useful supplemental resources, including Psychotherapy Assessment Checklist (PAC) forms and instructions.

The Chainsaw Operator's Manual is an essential safety tool for chainsaw operators. It is the ultimate guide to basic chainsaw operating techniques covering safety, maintenance and cross-cutting, but not tree felling. Detailed diagrams illustrate horizontal, vertical and boring cuts, as well as trimming and cross-cutting techniques. Safety considerations are discussed, including workplace safety, occupational hazards, kick-back and identifying dangerous trees. An explanation of the 'tension' and 'compression' forces in timber is also provided to help you understand where to begin cutting to avoid jamming the saw. The book covers chainsaw maintenance in detail, explains all aspects of the equipment and helps you select the right

chainsaw and personal protection equipment for your needs. Troubleshooting charts are included to help you solve operating problems. This manual has been updated to take into account the most recent changes in nationally accredited competency standards. It is a must-have for anyone operating a chainsaw.

(archaeobotany and zooarchaeology) and
geochronological information and
examines how these various aspects of
archaeology may be used to enhance our
knowledge and understanding of past
human environments. Drawing from both
the practical experiences of the authors
and cutting-edge research, *Environmental
Archaeology: Theoretical and Practical
Approaches* is a valuable contribution to
the subject. It will be essential reading for
students and professionals in archaeology,
geography and anthropology.

This is a romantic look back at southern
foods and foodways. Typical of many other
such books following the Civil War, there is
a touching, nostalgic (condescending)
evocation of the author's Mammy and her
cooking. Painful as some of this is to read
today, we find an underlying love and
admiration for the Mammy and a feeling of
loss for the "good old days." If one can
pass by this aspect of the book, one can
learn a great deal about an antebellum
Southern kitchen. Every chapter contains
good, solid Southern recipes. Many pages
are required to discuss all the variations
on the theme of the pig and pork: how to

select, cure, pickle, make hams, hang
hams, smoke, Render Lard, Prepare Fried
Hog's Feet, Souse and Hog's Foot Oil and
Jelly. We also have Barbecued Rabbit,
Squirrel Smothered, Possum Roasted,
Fried Chicken, Fig Pudding, Fried Pies,
Sweet Potato Custard, Molasses Pie,
Blackberry Mush, and Baked
Peaches. There are sections on Creole
Cookery, and fascinating discussions on
the foods and festivities associated with
special occasions - Weddings, Christmas,
Birthday Barbecues, and Political
Barbecues, among others.

Drawing on the work of internationally acclaimed experts in the field, *Handbook of Item Response Theory, Volume Two: Statistical Tools* presents classical and modern statistical tools used in item response theory (IRT). While IRT heavily depends on the use of statistical tools for handling its models and applications, systematic introductions and reviews that emphasize their relevance to IRT are hardly found in the statistical literature. This second volume in a three-volume set fills this void. Volume Two covers common probability distributions, the issue of models with both intentional and nuisance parameters, the use of information criteria, methods for dealing with missing data, and model identification issues. It also addresses recent developments in parameter estimation and model fit and comparison, such as Bayesian approaches, specifically Markov chain Monte Carlo (MCMC) methods.
