We shall examine the validity of 16 experimental designs against 12 common threats to valid inference. By experiment we refer to that portion of research in which variables are manipulated and

their effects upon other variables observed. It is well to distinguish the particular role of this chapter. It is not a chapter on experimental design in the Fisher (1925, 1935) tradition, in which an experimenter having complete mastery can schedule treatments and measurements for optimal statistical efficiency, with complexity of design emerging only from that goal of efficiency. Insofar as the designs discussed in the present chapter become complex, it is because of the intransigency of the environment: because, that is, of the experimenter's lack of complete control.

Designing and Managing a Research Project is a concise, easy to read text designed to guide business students through the various aspects of designing and managing research projects.

The focus is on research projects that have a solid academic basis, although some implications for more applied projects are also highlighted. It is divided into three main sections, "Laying the Foundations", "Undertaking the Research", and "Communicating the Results", which present a logical flow for the research project. A unique aspect of the book is the inclusion of particular chapters on topics like supervision, group work and ethics, and the focus of the discussion of data analysis (qualitative and quantitative). The authors have applied their years of past experience in supervising student projects, when writing this book to provide some actual examples of problems and practical guidelines.
