[Vibe Merchants: The Sound Creators of Jamaican Popular Music](#) Mixerman Publishes

Vibe Merchants offers an insider's perspective on the development of Jamaican Popular Music, researched and analysed by a thirty-year veteran with a wide range of experience in performance, production and academic study. This rare perspective, derived from interviews and ethnographic methodologies, focuses on the actual details of music-making practice, rationalized in the context of the economic and creative forces that locally drive music production. By focusing on the work of audio engineers and musicians, recording studios and recording models, Ray Hitchins highlights a music creation methodology that has been acknowledged as being different to that of Europe and North America. The book leads to a broadening of our understanding of how Jamaican Popular Music emerged, developed and functions, thus providing an engaging example of the important relationship between music, technology and culture that will appeal to a wide range of scholars.

[Sound of Music](#) Taylor & Francis

The Sound of Music Covers a wide range of music topics from the history of instruments, music theory, composing to the most current technologies involved in music composition and sound recording. A special chapter on the Musical Brain explains current knowledge in the brain processing of sound as it applies to language and music decoding. A chapter on the Music Business reviews the dramatic changes in music marketed and discusses some of the dilemmas and controversies facing musicians. The author states: " This book emerged from notes I have kept for several decades. Over many years, I have learned more about music theory, electronics applied to sound reproduction and to performance skills. Music descriptions often are often complicated and the use of terms can be inconsistent and confusing. As with other subjects I have tackled, I assumed that with a little extra

effort more precise descriptions would be welcomed by readers seeking a practical understanding of music. We begin with a consideration of what sound is and how animals use sounds to communicate. Music is not a human invention, but we do elaborate sound communication more than other animals in our production of both speech and musical performances. The discussion continues with noise, an important topic that is poorly understood. A well informed musician will refrain from making noise and understand Ambrose Bierce when he stated: Of all noise, music is the least offensive." I include both acoustic and electronic instruments in my discussions of music creation. In my world, electronics dominate every aspect of work and play and most music I create and listen to was created, stored and distributed electronically. The art and science of recording is an important study for all 21st century musicians. Increased sophistication about the nature of sound, the art of combining musical sounds, and the effect on the listener's brain are all required for music to advance beyond noise toward a more effective means of human communication."
