Exploring Language Aptitude: Views from Psychology, the Language Sciences, and Cognitive Neuroscience Cambridge University Press

This project investigates the relationships between native language grammar proficiency, language aptitude, and success in learning a second language. It builds on the research of Jim Cummins with the Developmental Interdependence Hypothesis (1979; 1982) which claims that success in a second language follows closely with the success and skills developed in one's native, or first, language and that success can be predicted according to these skills. This study hypothesizes that native language (English in this case) grammar proficiency will predict success in a student's second language. Numerous studies have shown that language aptitude is a measure that can also predict success in a second language, but this study posits that perhaps aptitude also tends to lead students to self-choose harder languages (the difficulty of languages in this study is defined by the Department of Defense). This study also predicts that there exists a correlation between native language grammar proficiency and language aptitude. To test this, an English grammar proficiency test and an abbreviated language aptitude test were given to 122 students studying one of five languages at Florida State University. The languages varied in difficulty and included Chinese, Arabic, Russian, French, and Spanish. The students' grades were used to measure success. There exists a correlation between English grammar proficiency and success in the target language and between English grammar proficiency and language aptitude, as well as a correlation between language aptitude and choice of language difficulty.

General English for All Competitive Examinations Tata McGraw-Hill Education This comprehensive volume identifies and analyzes the significant ideas and institutions that shaped the Western

educational heritage. The author examines how worldwide events have impacted education in Europe, North America, and beyond. The third edition incorporates fresh material about the ancient world, European exploration and colonization of North America and India, as well as updated chapters on education in the United Kingdom, France, Germany, and Russia. This edition has an expanded treatment of Carl Jung, a new section on Margaret Naumburg and her Walden School, and enhanced analysis of many other theorists. It concludes with broadened coverage of nineteenth, twentieth, and twenty-first century American education, including many educators new to the third edition. Each chapter contains a new feature: Reflection, Discussion, and Research. From Plato and Aristotle to John Dewey, leading educators raised perennial concepts about education and truth, meaning, and value that remain relevant today. In the progression from antiquity to the present, some issues are marked by change and others by continuity—all of which are important to consider, discuss, and research further.

This book explores heterogeneity in the Indian academic setting. Presenting a study on the performance of Bachelor of Engineering students from various parts of the county, it analyzes the subjects' language skills on the basis of selected sociolinguistic variables and examines the possible role/impact of using multiple languages in the communicative setting described. In turn, the book investigates the differences between the way language is viewed in the Orient and in the Western world, and how, despite their differences, these views lead to similar language teaching methods in both worlds. It also highlights the limitations of current theories and frameworks in terms of accommodating modern methods of assessing language skills. Addressing socio-pragmatic issues in terms of English proficiency and language assessment, it is the first book to offer such a focused and detailed discussion of these varied but related issues, making it a valuable resource for all scholars and researchers working in the areas of socio-pragmatics, language assessment, and intercultural communication.

Predictors of Choice and Success in a Second Language Trafford Publishing

A few years ago, a magazine sponsored a contest for the comment most likely to end a conversation. The winning entry? "I teach English grammar." Just throw that line out at a party; everyone around you will clam up or start saying "whom." Why does grammar make everyone so nervous? Probably because English teachers, for decades – no, for centuries – have been making a big deal out of grammar in classrooms, diagramming sentences and drilling the parts of speech, clauses, and verbals into students until they beg for mercy. Happily, you don't have to learn all those technical terms of English grammar – and you certainly don't have to diagram sentences – in order to speak and write correct English. So rest assured – *English Grammar For Dummies* will probably never make your English teacher's top-ten list of must-read books, because you won't have to diagram a single sentence. What you will discover are fun and easy strategies that can help you when you're faced with such grammatical dilemmas as the choice between "I" and "me," "had gone" and "went," and "who" and "whom." With *English Grammar For Dummies*, you won't have to memorize a long list of meaningless rules (well, maybe a couple in the punctuation chapter!), because when you understand the reason for a particular word choice, you'll pick the correct word automatically. *English Grammar For Dummies* covers many other topics as well, such as the following: Verbs, adjectives, and adverbs – oh my! Preposition propositions and pronoun pronouncements Punctuation: The

lowdown on periods, commas, colons, and all those other squiggly marks Possession: It's nine-tenths of grammatical law Avoiding those double negative vibes How to spice up really boring sentences (like this one) Top Ten lists on improving your proofreading skills and ways to learn better grammar Just think how improving your speaking and writing skills will help you in everyday situations, such as writing a paper for school, giving a presentation to your company's big wigs, or communicating effectively with your family. You will not only gain the confidence in knowing you're speaking or writing well, but you'll also make a good impression on those around you! *Code of Federal Regulations* Springer Nature

"A highly successful organisation is built on the strengths of exceptional people. No matter how much technology and mechanisation is developed, no organisation could survive and prosper without them". --- Luszez and Kleiner, 2001 The most important corporate resource over the next few years will be talent: smart, sophisticated business people who are technologically literate, globally astute, and operationally agile. And even as the demand for talent goes up, the supply of it will be going down. This seems to particularly hold true in case of the IT-ITES (Information Technology and Information Technology- Enabled Services) industry in India which requires high quality and highly skilled labour force to cater to the rapidly increasing global demand for software services but is currently facing an increasing shortage of skills supply. Moreover, due to shortages of skilled workers, high turnover rates, and rapid business growth in the service sectors, it has been noted that recruiting, selecting, and placing applicants are among the top three priorities of human resource professionals. Since the IT industry in India is faced with these three challenges, recruitment and selection comprises an important human resource practice in this industry. Further, in this industry, human resources comprise both the raw material and the 'technology', and are therefore of prime importance. As India completes the transition from being an agrarian economy to being a full-fledged, first-world economy, operating at the leading edge of contemporary technology, the IT sector is emerging as major driver of the economy. The Indian IT industry comprises of domestic software and services firms as well as foreign firms looking to consolidate their presence in India owing to the increasing cost pressures in US and Europe. This has

increased the need to setup in-house development centers or outsource to third-party service providers in low cost countries such as India. IT and IT enabled services include a wide range of services from back-office data entry and processing to customer contact services, corporate support functions, knowledge support functions and research and design activities. As per the latest Forbes Research, India now controls 44 per cent of the global offshore outsourcing market for software and back office services. As per Nasscom estimates, it is projected to grow to 51 per cent. If this growth is sustained, Nasscom has estimated that there will be a potential shortfall of above 2, 10,000 IT and ITES professionals in India

by the year 2012 and demand will outpace the supply. Though the Indian IT industry is in a strong position to leverage this global software opportunity (as India currently has one of the world's largest, most qualified pools of scientific and engineering manpower), this growing global demand is not only for numbers but also for appropriately skilled, industry-oriented professionals as companies are further scaling their operations and offering high value-added services which involve higher levels of technology and more specialized, higher-end services. Hence, firms which want to maintain their competitive advantage have to carefully recruit and select the most suitable out of the large pool of available manpower.

Moreover, according to a recent study by McKinsey & Co., although the potential supply of talent in low wage countries such as India is large and growing rapidly, only a fraction of the job candidates could successfully work at a foreign company on account of their limited suitability i.e. though there are many candidates with the technical skills to fill a position, they may not have the cultural skills to "fit in" with the organisation. The same issue is also faced by large globally competitive domestic Indian firms who are competing for the same pool of talent and skills as their foreign counterparts to remain competitive and survive in global and domestic markets.
