This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the

guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products. Cognitive sciences have been involved under numerous accounts to explain how humans interact with technology, as well as to design technological instruments tailored to human needs. As technological advancements in fields like wearable and ubiquitous computing, virtual reality, robotics and artificial intelligence are presenting novel modalities for interacting with technology, there are opportunities for deepening, exploring, and even

rethinking the theoretical foundations of human technology use. This volume entitled “Cognition and Interaction: From Computers to Smart Objects and Autonomous Agents” is a collection of articles on the impacts that novel 3 September *Frontiers in Psychology* 2019 | Cognition and Interaction interactive technologies are producing on individuals. It puts together 17 works, spanning from research on social cognition in human-robot interaction to studies on neural changes triggered by Internet use, that tackle relevant technological and theoretical issues in human-computer interaction, encouraging us to rethink how we conceptualize technology, its use and development. The volume addresses fundamental issues at different levels.

The first part revolves around the biological impacts that technologies are producing on our bodies and brains. The second part focuses on the psychological level, exploring how our psychological characteristics may affect the way we use, understand and perceive technology, as well as how technology is changing our cognition. The third part addresses relevant theoretical problems, presenting reflections that aim to reframe how we conceptualize ourselves, technology and interaction itself. Finally, the last part of the volume pays attention to the factors involved in the design of technological artifacts, providing suggestions on how we can develop novel technologies closer to human needs. Overall, it appears that human-computer interaction will have to

face a variety of challenges to account for the rapid changes we are witnessing in the current technology landscape.

This book is open access under a CC BY-NC-ND 3.0 IGO license. The Early Years analyzes the development of Latin American and Caribbean children and makes a compelling case for government intervention in what is instinctively a family affair. Spending on effective programs for young children is an investment that, if done well, will have very high returns, while failure to implement such programs will lower the returns on the hefty investments being made in primary, secondary, and higher education. Policies for young children belong at the core of a country's development agenda, alongside policies to develop infrastructure and strengthen institutions. However, if the services provided (or funded) by governments are to benefit children, they must be

substantially better than what is currently being delivered in the region. This book offers suggestions for improving public policy in this critical area.

Welcome to America's only Jewish prison . . . rugelach, blintzes, and a quest for vengeance from the highest tier of the US government The scene is Otisville Prison, upstate New York. A crew of fraudsters, tax evaders, trigamists, and forgers discuss matters of right and wrong in a Talmudic study and prayer group, or "minyan," led by a rabbi who's a fellow convict. As the only prison in the federal system with a kosher deli, Otisville is the penitentiary of choice for white-collar Jewish offenders, many of

whom secretly like the place. They've learned to game the system, so when the regime is toughened to punish a newly arrived celebrity convict who has upset the 45th president, they find devious ways to fight back. Shadowy forces up the ante by trying to "Epstein"—ie assassinate—the newcomer, and visiting poetry professor Deborah Liston ends up in dire peril when she sees too much. She has helped the minyan look into their souls. Will they now step up to save her? Jonathan Stone brings the sensibility of Saul Bellow and Philip Roth to the post-truth era in a sharply comic novel that is also wise, profound, and deeply moral.
