Defining the Path to Inclusion and Innovation Paulist Press

Jim Fowler explains that Christianity is not a book-religion, not a belief-system, not morality, not role-playing, not social problem-solving, not an ideological option, and not an ...ism, before concluding with the positive emphasis that Christianity IS Christ.

This book, now in its second edition, brings together the best available understandings of human development from a multidisciplinary perspective. Uniquely inclusive of the moral and faith dimensions of context and life-cycle development, Human Development and Faith examines the interplay of mind, body, family, community, and soul at every stage of development. It addresses two central questions: What are the "good-enough" conditions of parenting, family, and community in each phase of life, from birth to death, that support growth and development? What gives life adequate meaning as development proceeds? If human development describes the normative and hoped-for passages of life, then faith provides the necessary component of meaning. Throughout the various perspectives offered in this volume is the premise that faith is that quality of living that makes it possible to fully live. The Journal of Pastoral Theology called the first edition of Human Development and

Faith "an excellent text for pastoral theology courses, because it fulfills its ambitious goal of bringing a holistic faith perspective to the usual topics of development." This second edition includes a new chapter on infancy, updates reflecting our growing awareness of cultural diversity, and a new preface.

In *Stages of Thought*, Michael Barnes examines a pattern of cognitive development that has evolved over thousands of years--a pattern manifest in both science and religion. He describes how the major world cultures built upon our natural human language skills to add literacy, logic, and, now, a highly critical self-awareness. In tracing the histories of both scientific and religious thought, Barnes shows why we think the way that we do today. Although religious and scientific modes of thought are often portrayed as contradictory--one is highly rational while the other appeals to tradition and faith--Barnes argues that they evolved together and are actually complementary. Using the developmental thought of Piaget, he argues that cultures develop like individuals in that both learn easier cognitive skills first and master the harder ones later. This is especially true, says Barnes, because the harder ones often require first the creation of cognitive technology like writing or formal logic as well as the creation of social institutions that teach and sustain those skills. Barnes goes on to delineate the successive stages of the co-evolution of religious and scientific thought in the West, from the preliterate cultures of antiquity up to the present time. Along the way, he covers topics such as the

impact of literacy on human modes of thought; the development of formalized logic and philosophical reflections; the emergence of an explicitly rational science; the birth of formal theologies; and, more recently, the growth of modern empirical science. This groundbreaking book offers a thorough and persuasive argument in favor of the development of modes of thought across cultures. It will serve as an invaluable resource for historians of religion, philosophers and historians of science, and anyone interested in the relationship between religion and science.

A Practical Guide to Emotional and Spiritual Growth Revell

In our current era of holy terror, passionate faith has come to seem like a present danger. Writers such as Richard Dawkins, Sam Harris, and Christopher Hitchens have been happy to throw the baby out with the bathwater and declare that the danger is in religion itself. God, Hitchens writes, is not great. But man, according to George E. Vaillant, M.D., is great. In *Spiritual Evolution*, Dr. Vaillant lays out a brilliant defense not of organized religion but of man's inherent spirituality. Our spirituality, he shows, resides in our uniquely human brain design and in our innate capacity for emotions like love, hope, joy, forgiveness, and compassion, which are selected for by evolution and located in a different part of the brain than dogmatic religious belief. Evolution has made us spiritual creatures over time, he argues, and we are destined to become even more so. *Spiritual Evolution* makes the scientific case for spirituality as a positive force in human evolution, and he predicts for our species an even more loving future. Vaillant traces this positive force in three different kinds of "evolution": the natural selection of genes over millennia, of course, but also the cultural evolution within recorded history of ideas about the value of human life, and the development of spirituality within the lifetime of each individual. For thirty-five years, Dr. Vaillant directed Harvard's famous longitudinal study of adult development, which has followed hundreds of men over seven decades of life. The study

has yielded important insights into human spirituality, and Dr. Vaillant has drawn on these and on a range of psychological research, behavioral studies, and neuroscience, and on history, anecdote, and quotation to produce a book that is at once a work of scientific argument and a lyrical meditation on what it means to be human. *Spiritual Evolution* is a life's work, and it will restore our belief in faith as an essential human striving.

In *Integrative Spirituality*, Patrick J. Mahaffey elucidates spirituality as a developmental process that is enhanced by integrating the teachings and practices of multiple religious traditions, Jungian depth psychology, and contemplative yoga. In the postmodern world of religious pluralism, Mahaffey compellingly argues that each of us must fashion a unique path to wholeness which integrates aspects of life and of the self that have become disconnected and disowned. *Integrative Spirituality* uniquely conjoins four components: exemplary religious pluralists from three traditions, individuation, the forms of contemplative Hindu yoga that have been successfully transmitted to the West, and a presentation of two models for integrating psychological growth and spiritual awakening. The book presents pioneering practitioners in each field who exemplify how we may fashion our own approach to integrating both spiritual awakening and psychological development and delineates an array of spiritual practices that integrate the somatic, psychological, interpersonal, and spiritual aspects of life. Ultimately, Mahaffey contends that integrative spirituality is a mode of being that fully embraces the divinity inherent in each of us and in the world. *Integrative Spirituality* will be essential reading for academics and students of Jungian and

post-Jungian studies, transpersonal and Jungian psychology, and religious studies and contemplative education. It will also be of interest to analytical and depth psychologists in practice and in training, and to anyone seeking a greater understanding of spirituality, psychological growth, religious traditions, individuation, and contemplative yoga.

Dr. James Fowler has asked these questions, and others like them, of nearly six hundred people. He has talked with men, women, and children of all ages, from four to eighty-eight, including Jews, Catholics, Protestants, agnostics, and atheists. In many cases, the interviews became in-depth conversations that provided rare, intimate glimpses into the various ways our lives have meaning and purpose, windows into what this book calls faith. Faith, as approached here, is not necessarily religious, nor is it to be equated with belief. Rather, faith is a person's way of leaning into and making sense of life. More verb than noun, faith is the dynamic system of images, values, and commitments that guide one's life. It is thus universal: everyone who chooses to go on living operated by some basic faith. Building on the contributions of such key thinkers as Piaget, Erikson, and Kohlberg, Fowler draws on a wide range of scholarship, literature, and firsthand research to present expertly and engagingly the six stages that emerge in working out the meaning of our lives--from the intuitive, imitative faith of childhood through conventional and then more independent faith to the universalizing, self-transcending faith of full maturity. *Stages of Faith* helps us to understand our own pilgrimage of faith,

the passages of our own quest for meaning and value.

Journey of the Soul Augsburg Fortress Publishing

This book is the first practical, hands-on guide that shows how leaders can build psychological safety in their organizations, creating an environment where employees feel included, fully engaged, and encouraged to contribute their best efforts and ideas. Perhaps the leader's most challenging task is to increase intellectual friction while decreasing social friction. When this doesn't happen and it becomes emotionally expensive to say what you truly think and feel, that lack of psychological safety triggers the self-censoring instinct, shuts down learning, and blocks collaboration and creativity. Timothy R. Clark, a former CEO, Oxford-trained social scientist, and organizational consultant, provides a research-based framework to help leaders transform their organizations into sanctuaries of inclusion and incubators of innovation. When leaders cultivate psychological safety, teams and organizations progress through four successive stages. First, people feel included and accepted; then they feel safe to learn, contribute, and finally, challenge the status quo. Clark draws deeply on psychology, philosophy, social science, literature, and his own experiences to show how leaders can, and must, set the tone and model the ideal behaviors—as he says, “you either show the way or get in the way.” This thoughtful and pragmatic guide demonstrates that if you banish fear, install true performance-based accountability, and create a nurturing environment that allows people to be vulnerable as they learn and grow, they will perform beyond your expectations.

In this updated reissue of his 1984 classic, James Fowler applies his groundbreaking research on the development of faith to Christianity. In his revised first chapter Fowler locates his approach to the study of human and faith development in relation to the contemporary conversation about identity and selfhood in postmodernity. Fowler invites readers to explore what it means to find and claim vocation: a purpose for one's life that is part of the purposes of God. Reclaiming covenant and vocation as ideals for responsible, mature, Christian selfhood, Fowler shows how a dynamic understanding of what vocation involves can both inform and transform lives.

Women's Faith Development Convergent The author identifies three different types of change and shows how faith must both sustain us in the midst of personal and social change and undergo the process of change itself. Faithful Change extends the discussion of the nature and dynamics of faith begun in
