Invisible Crown Books for Young Readers

This book explores the concept of incongruent film music, challenging the idea that this label only describes music that is inappropriate or misfitting for a film's images and narrative. Defining incongruence as a lack of shared properties in the audiovisual relationship, this study examines various types of

incongruence between a film and its music and considers the active role that it can play in the construction of a film's meaning and influencing audience response. Synthesising findings from research in the psychology of music in multimedia, as well as from ideas sourced in semiotics, film music, and poststructuralist theory, this interdisciplinary book provides a holistic perspective that reflects the complexity of moments of film-music incongruence. With case studies including well-known films such as *Gladiator* and *The Shawshank Redemption*, this book combines scene analysis and empirical audience reception tests to emphasise the subjectivity, context-dependency, and multi-dimensionality inherent in identifying and interpreting incongruent film music.

The Horatian formula *prodesse et delectare* was extremely influential in the production of texts across various languages and genres. While indeed didactic elements can be attested to in almost any medieval text, and while medieval literature displays a range of possibilities to teach and instruct, the scope of the present volume is more closely focused on explicitly didactic literature. This volume combines contributions that analyse didactic literature in high medieval Europe from different vantage points. They open new perspectives on education as a working principle or legitimizing strategy in the heterogeneous forms of writing intended to convey knowledge. This broad thematic, linguistic and geographical scope enables us to view didactic literature as the universal phenomenon it was and prompts us to understand its influence on many aspects of society in high medieval Europe and beyond. While the contributions explore case studies predominantly from this period of transition and the expansion of the categories of knowledge, they also trace some of these developments into the later Middle Ages to spotlight the lasting influence of high medieval teaching and learning in literature. The way medieval writers combine 'the pleasant' with 'the useful' is this book's main question.

This intensely interesting—and troubling—book is the product of a lifetime of reflection and study of democracy. In it, John Lukacs addresses the questions of how our democracy has changed and why we have become vulnerable to the shallowest possible demagoguery. Lukacs contrasts the political systems, movements, and ideologies that have bedeviled the twentieth century: democracy, Liberalism, nationalism, fascism, Bolshevism, National Socialism, populism. Reflecting on American democracy, Lukacs describes its evolution from the eighteenth century to its current form—a dangerous and possibly irreversible populism. This involves, among other things, the predominance of popular sentiment over what used to be public opinion. This devolution has happened through the gigantic machinery of publicity, substituting propaganda—and entertainment—for knowledge, and ideology for a sense of history. It is a kind of populism that relies on nationalism and militarism to hold society together. Lukacs's observations are original, biting, timely, sure to inspire lively debate about the precarious state of American democracy today.

Seventy-five percent of processed foods on supermarket shelves—from soda to soup, crackers to condiments—contain genetically engineered ingredients. The long-term effects of these foods on human health and ecology are still unknown, and public concern has been steadily intensifying. This new book from the Council for Responsible Genetics gathers the best, most thought-provoking essays by the leading scientists, science writers, and public health advocates. Collectively, they address such questions as: Are GM foods safe and healthy for us? Will GM food really solve world hunger? Who really

controls the power structure of food production? Are GM foods ecologically safe and sustainable? Why is it so difficult to get GM foods labeled in the US? What kinds of regulations and policies should be instituted? How is seed biodiversity, of lack thereof, affecting developing countries? Should animals be genetically modified for food? How are other countries handling GM crops? Ultimately, this definitive book encourages us to think about the social, environmental, and moral ramifications of where this particular branch of biotechnology is taking us, and what we should do about it.
