reverse does not apply because the 60 Hz (designed) transformer - assuming it has 1.5 T flux density for rated voltage - will end up at 60/50 x 1.8 T when connected to the same system voltage but at 50 Hz. This will cause many a modern (fully rated) 60 Hz transformer to overheat, due to the saturation of the core. 50Hz transformer being used on 60Hz power supply
