The three concepts of case, valency and transitivity belong to the most discussed topics of modern linguistics. On the one hand, they are crucially connected with morphological aspects of the clause, including case marking, person agreement and voice. On the other hand, they are related to several semantic issues such as the meaning of case, semantico-syntactic verbal classes, and the semantic correlates of transitivity. The volume unifies papers written within different theoretical frameworks and representing variegated approaches (Optimality Theory, Government and Binding, various versions of the Functional approach, Cross-linguistic and Typological analyses), containing both numerous new findings in individual languages and valuable observations and generalizations related to case, valency and transitivity.

Designed as a textbook for undergraduate students in various engineering disciplines—Mechanical, Civil, Industrial Engineering, Electronics Engineer-ing and Computer Science—and for postgraduate students in Industrial Engineering and Water Resource Management, this comprehensive and well-organized book, now in its Second Edition, shows how complex economic decisions can be made from a number of given alternatives. It provides the managers not only a sound basis but also a clear-cut approach to making decisions. These decisions will ultimately result in minimizing costs and/or maximizing benefits. What is more, the book adequately illustrates the concepts with numerical problems and Indian cases. While retaining all the chapters of the previous edition, the book adds a number of topics to make it more comprehensive and more student friendly. What's New to This Edition • Discusses different types of costs such as average cost, recurring cost, and life cycle cost. • Deals with different types of cost estimating models, index numbers and capital allowance. • Covers the basics of nondeterministic decision making. • Describes the meaning of cash flows with probability distributions and decision making, and selection of alternatives using simulation. • Discusses the basic concepts of Accounting. This book, which is profusely illustrated with worked-out examples and a number of diagrams and tables, should prove extremely useful not only as a text but also as a reference for those offering courses in such areas as Project Management, Production Management, and Financial Management.

*Understanding Software Architecture* Revell

The creation of the fundamental structures of a software system is referred to as software architecture. The architecture of a software system functions as a blueprint for the system and the developing project. It details the tasks necessary to be executed during the designing. There are four core activities in software architecture design that are performed iteratively at different stages of the initial software development life cycle. These activities include architectural analysis, architectural synthesis, architectural evaluation and architectural evolution. Some common components of software architecture are software architecture description, architecture description languages, architecture viewpoints, architecture frameworks and software architecture erosion. This

book contains some path-breaking studies in the field of software architecture. It traces the progress of this field and highlights some of its key concepts and applications. The extensive content of this textbook provides the readers with a thorough understanding of the subject.

The pandemic has made teaching English as a second language more challenging than before. A revamp of teaching strategies was warranted on the part of teachers. English teachers were pushed into adopting all new strategies with an ill-aided technical support and adapting to newer forms of learning. All pressures - social, economic, political, familial, technological, biological and psychological - were brought upon them. Playing newer roles and employing newer strategies have become inevitable. Undertaking the challenge of running online classes is inescapable. This book with 23 articles aims at addressing all challenges English teachers face while teaching online and offering solutions.

These Transactions publish research in computer-based methods of computational collective intelligence (CCI) and their applications in a wide range of fields such as the Semantic Web, social networks and multi-agent systems. TCCI strives to cover new methodological, theoretical and practical aspects of CCI understood as the form of intelligence that emerges from the collaboration and competition of many individuals (artificial and/or natural). The application of multiple computational intelligence technologies such as fuzzy systems, evolutionary computation, neural systems, consensus theory, etc., aims to support human and other collective intelligence and to create new forms of CCI in natural and/or artificial systems. This second TCCI issue contains a collection of 10 articles selected from high-quality submissions addressing advances in the foundations and applications of computational collective intelligence.

The search for a distinct "terrorist profile" has been going on for many years, and while it is generally agreed that nobody is born a terrorist, there is plenty of disagreement about why a person might become one. Whereas personal and situational push and pull factors can be combined to determine how and why young people become involved in terrorism, preventing an individual from following a path that ends in violence without moral restraint poses an enormous challenge, especially in an open society. This book presents papers from the NATO Advanced Research Workshop titled "A Review of the Utility of Existing Terrorism Risk Assessment Instruments and Policies: Is there the Need for Possible New Approaches?", held in Berlin, Germany, on 29-30 November 2019. Researchers were asked to present papers for discussion sessions with invited participants and practitioners from a number of NATO member and partner countries. Various assessment instruments for identifying problematic individuals at an early stage were presented by experts. It was generally agreed that, due to cultural, religious and other differences, there is no simple way to identify the relatively few high-risk individuals among the larger population of politically radicalized but not necessarily violent individuals who pose no threat. Framed by an Introduction and Conclusion, the 16 chapters in the book are divided into three parts: Theory and Risk/Threat Assessment Instrument Policy Themes; Implementation of Politically Motivated Terrorism Protocols; and Personality Traits/Disorders, Anti-State Terrorism Profiles and the DSM-5 Personality Trait Instrument. This practice-oriented book will be of interest to all those tasked with protecting society from some of its most dangerous members.

Home is the place to heal, right? At least, that's what Dillon Michaels is hoping as she leaves her disappointing career and nonstarter love life behind to help her grieving and aging grandfather on his small Oregon farm. The only problem? Her eccentric mother beat her there and has taken over Dillon's old room. After a few nights sleeping on a sagging sofa, Dillon is ready to give up, until she receives an unlikely gift--her grandfather's run-down vintage camp trailer, which she quickly

resolves to restore with the help of Jordan Atwood, the handsome owner of the local hardware store. But just when things are finally beginning to run smoothly, Dillon's noncommittal ex-boyfriend shows up with roses . . . and a ring. Full of quirky characters, family drama, and sweet romance, *The Happy Camper* will have you scouring Craigslist for your own diamond-in-the-rough camper to restore and haunting your local hardware store for a handy guy to help your dreams come true.
