Essays on Economics

The book is concerned
with the theory of

portfolios, as well as with investing in assets and securities and offers a general introduction, rather than a toolbox for making money. It will help its readers to better understand investing. The book is structured in two parts. Part I introduces the student into fundamental principles of portfolio theory and investment analysis, such as the Markowitz portfolio selection approach, factor models, basic evaluation techniques and portfolio management. Part II extends the material to more advanced topics and focuses on inefficient markets, including topics including technical analysis and momentum effects, behavioural finance,

bubbles and herding, portfolio management in inefficient markets and market microstructure. followed by an appendix consisting of primers to some econometric approaches. *American Men of Science* BoD – Books on Demand Since its inception some 40 years ago, petroleum-specific taxation in the UK has been subject to numerous modifications. Often these modifications were brought into place not only to sufficiently incentivise the investors but also to capture a fair share for the government. However, it is evident from the frequency of changes that finding the right balance between these two

aims is no easy matter. Such a balance, and the consequent fiscal stability, is necessary for the long-term relationship between the parties to endure to their mutual benefit. Still, it does not take much for one or other party to feel that they are out of balance. As a consequence, one party feels that the other party is taking an undue proportion of the value generated and that they are losing out. Yet achieving that balance and fiscal stability is possible. To understand this possibility, this book first clarifies what is meant by sufficient incentivisation and fair share before developing a new fiscal system that manages this balance and stability. Such

clarification yields objective criteria against which to assess not only the existing regime, but also the newly proposed regime. This approach is further complemented by the critical analysis of the fiscal legislative framework and the evaluation of the legal positions of specific contractual elements and mechanisms found within that framework. This latter analysis is important in order to reduce the legal uncertainty such elements may create, which can otherwise lead to further reactive amendments and revisions to the fiscal regime in the future.

Fatal Civil Aircraft
Accidents: Their

Medical and Pathological Investigation focuses on relevant literature and discussions of the impact of medical and pathological investigation on fatal flying accidents. The publication first elaborates on public transport accidents, natural disease in the operating crew, impaired efficiency of a pilot due to intoxication, and non-medical cause for an accident. Topics include carbon monoxide intoxication, drugs, natural disease as a contributory cause for an accident, and natural disease as the primary cause for an accident. The book then takes a look at pathological evidence of events prior to an accident, reconstruction of

events at impact and immediately after an accident, and natural disease in the pilots. The book ponders on glider accidents, natural disease in glider pilots, reconstruction of events during an accident, survival and safety equipment, and medical standards for glider pilots. The manuscript also examines fatal airliner accident as an example of mass disaster, official bodies and groups concerned with the investigation of an accident, identification of the bodies of the dead, and certification of death and disposal of the deceased. The text is a valuable source of data for researchers interested in the medical and pathological

investigation of aircraft accidents. Grada Publishing a.s. For many Americans the mention of Africa immediately conjures up images of safaris, ferocious animals, strangely dressed "tribesmen," and impenetrable jungles. Although the occasional newspaper headline mentions authoritarian rule, corruption, genocide, devastating illnesses, or civil war in Africa, the collective American consciousness still carries strong mental images of Africa that are reflected in advertising, movies, amusement parks, cartoons, and many other corners of society. Few think to question these perceptions or how they came to be so deeply lodged in

American minds. Mistaking Africa looks at the historical evolution of this mindset and examines the role that popular media plays in its creation. The authors address the most prevalent myths and preconceptions and demonstrate how these prevent a true understanding of the enormously diverse peoples and cultures of Africa. Updated throughout, the fourth edition covers the entire continent (North and sub-Saharan Africa) and provides new analysis of topics such as social media and the Internet, the Ebola crisis, celebrity aid, and the Arab Spring. Mistaking Africa is an important book for African studies courses and for anyone interested in

unravelling American misperceptions about the continent.

The relationship between crime and the economy has received too little attention from researchers. This volume remedies that deficit, resurrecting several classic writings on this elusive topic by and about blacks, and presenting new contributions by researchers at the frontier of work on the subject. Among the landmark articles included are W.E.B. Dubois' famous examination of crime in Philadelphia, an analysis of black criminal behavior by Walter Willcox, who was chief statistician of the Census Bureau at the time he wrote this essay, and excerpts from the ninth Atlanta Conference on Negro Crime. The frontier articles use quality

microdata to understand particular aspects of criminal justice processes. They address the relationship between employment and criminal behavior, tradeoffs among education, employment, and crime, and the link between overall economic conditions and rates of incarceration. Among the authors represented in the landmark research articles are Harold Votey and Llad Phillips, Richard Freeman, David Good and Maureen Pirog-Good, Dario Melossi, and Samuel Meyers and William Sabol. Richard MaGahey concludes the volume with comments on the current status of research in the field.

This volume captures the emerging tension within scholarship on race and crime, and provides both a reflective vision of work in this area as well as state-of-the-art research by leading scholars.

A substantially revised edition of a bestselling text combining explanation and implementation using Excel; for classroom use or as a reference for finance practitioners. Financial Modeling is now the standard text for explaining the implementation of

financial models in Excel. This long-awaited fourth edition maintains the “cookbook” features and Excel dependence that have made the previous editions so popular. As in previous editions, basic and advanced models in the areas of corporate finance, portfolio management, options, and bonds are explained with detailed Excel spreadsheets. Sections on technical aspects of Excel and on the use of Visual Basic for Applications (VBA) round out the book to make Financial Modeling a complete guide for the financial modeler. The new edition of Financial Modeling includes a number of innovations. A new section explains the principles of Monte Carlo methods and

their application to portfolio management and exotic option valuation. A new chapter discusses term structure modeling, with special emphasis on the Nelson-Siegel model. The discussion of corporate valuation using pro forma models has been rounded out with the introduction of a new, simple model for corporate valuation based on accounting data and a minimal number of valuation parameters. Reflections on two centuries of economic history from a Nobel Prize winner in the field: "An accessible collection by a renowned economist."—Library Journal How do economists decide what questions to address and how to choose their theories?

How do they tackle the problems of the economic system and give advice on public policy? With these broad questions, Nobel laureate R. H. Coase, widely recognized for his seminal work on transaction costs, reflects on some of the most fundamental concerns of economists over the past two centuries. In fifteen essays, Coase evaluates the contributions of a number of outstanding figures, including Adam Smith, Alfred Marshall, Arnold Plant, Duncan

Black, and George Stigler, as well as economists at the London School of Economics in the 1930s. “Are you looking for a book by an economist who can really write and has insight after insight on free markets vs. government regulation? Would you like it even better if you could get some good laughs from his clever way of putting things? Then Ronald H. Coase’s *Essays on Economics and Economists* is the book for you.”—Reason
