The Living Systems Theory of Vocational Behavior and Development (LSVD) explains and illustrates the processes by which individuals construct their work experiences, vocational pathways and career patterns through episodes of interaction with affordances they recognize within their contexts, and how counseling can facilitate those processes. The LSVD was created by combining the scientifically based systems theory that explicates the dynamics of all aspects of human functioning and development, called Humans as Self-Constructing Living Systems, with important ideas about vocational behavior and development. The resulting integrative theory represents the individual person as a dynamic, self-directing and self-constructing entity, i.e., a living system. Behavior Episodes (BEs) are the fundamental, person-in-context, dynamic units of analysis that serve as the "building blocks" by which individuals construct and retain their experiences in patterns that can be reactivated to facilitate future BEs. The book describes how individuals' history of satisfying BEs and their current activities provide the means by which vocational and career counselors can assist them to create satisfying vocational pathways. It also describes for researchers how new, non-linear, person-centered, quantitative and qualitative research methods can be used to analyze BE patterns to advance understanding of person-level processes that play key roles in individuals' vocational behavior and development. The LSVD was designed to be not just an integrative framework for the field of career development, but also to reconnect the field to related areas such as human resources and industrial-organizational psychology and to the range of human sciences that have already embraced a living systems theoretical model.

By the authors of the bestselling 13th Gen, an incisive, in-depth examination of the Millennials--the generation born after 1982. In this remarkable account, certain to stir the interest of educators, counselors, parents, and people in all types of business as well as young people themselves, Neil

Howe and William Strauss provide the definitive analysis of a powerful generation: the Millennials. Having looked at oceans of data, taken their own polls, talked to hundreds of kids, parents, and teachers, and reflected on the rhythms of history, Howe and Strauss explain how Millennials have turned out to be so dramatically different from Xers and boomers. Millennials Rising provides a fascinating narrative of America's next great generation.

This book examines why workplaces around the world have become involved in childcare and the nature of the programs that have been implemented. It provides an overview of diverse workplace initiatives beyond traditional preschool care. Partnership is a key theme, and the authors highlight the fruitfulness of collaborations that combine the resources and capabilities of different actors. Ten industrialized and developing countries are examined through a national overview on policies and facilities for childcare and the implications for working parents, followed by case studies of specific workplaces. The studies provide considerable detail on why the childcare support was started, how it is funded and managed, how various partners are involved, and the perspectives of workers and employers on the support provided. The book shows how support for childcare has been organized and funded in a variety of workplaces and the diversity of the partnerships that have evolved in both developing and industrialized countries. It will be a useful resource for policymakers and workplace partners looking for practical ways to help working parents with their childcare needs.

Around 1796, Mr. Malthus, an English gentleman, had finished reading a book that confidently

predicted human life would continue to grow richer, more comfortable and more secure, and that nothing could stop the march of progress. He discussed this theme with his son, Thomas, and Thomas ardently disagreed with both his father and the book he had been reading, along with the entire idea of unending human progress. Mr. Malthus suggested that he write down his objections so that they could discuss them point-by-point. Not long after, Thomas returned with a rather long essay. His father was so impressed that he urged his son to have it published. And so, in 1798, appeared An Essay on Population, by British political economist and demographer THOMAS ROBERT MALTHUS (1766-1834). Though it was attacked at the time and ridiculed for many years afterward, it has remained one of the most influential works in the English language on the general checks and balances of the world's population and its necessary control. This is a replica of the 1826 sixth edition. Volume 1 includes: Book I: "Of the Checks to the Population in the Less Civilised Parts of the World and in Past Times" and Book II: "Of the Checks to the Population in the Different States of Modern Europe."

Career Development in the Schools describes a dynamic process that continues to evolve in its rationale and practice. In many schools and in a variety of scholarly writings, the status of career development is controversial. Some observers assert that career development should be seen as a by-product of all of the knowledge and activities that are incorporated in the educational experience. In this view, career development tends to be seen as a random process that happens in a natural, almost magical way, without specific direction or structured form. However, most career theorists would argue that the career development of students should be a major mission of the school—a process too important to be only a by-product of scattered learning and activities that are inherently uneven from student to student. The prevailing contemporary perspective contends that career development in the schools should be planned, have its own content derived from research and theory, be systematically executed, and use methods that are relevant to the developmental levels of students throughout elementary, middle, and senior high schools. To further such ends, several national models of content and practice have been formulated by the American School Counselor Association, the National Career Development Revised Guidance Project, and by other organizations to identify the components, competencies, and outcomes that students of different ages and aspirations need to acquire as they grow in maturity. Several of these models are discussed at length in the various chapters of this book.

Helping others to make occupational choices requires a combination of skill and a deep understanding of the world of work as it is today and will be in the future. Unlike texts that focus only on skill, Careers Guidance in Context is designed to develop understanding of the factors that shape both the labour market, and careers guidance as an occupation in itself. Careers Guidance in Context re-evaluates the concept of `a career' in the light of economic restructuring, globalization and the growth of information technology. It draws together up-to-date theories about guidance work and debates the importance of integrating theory and practice. Examining the processes in which practitioners engage when working with individual clients, the book also explores careers guidance within a group setting - an area that has previously been neglected in the literature. The book will be invaluable to students on courses in careers guidance, counselling and education. It will also be of great interest to professionals who need to keep up-to-date with current thinking and practice.
