Towards collaborative business ecosystems Last decade was fertile in the emerging of new collaboration mechanisms and forms of dynamic virtual organizations, leading to the concept of dynamic business ecosystem, which is supported (or induced ?) by the progress of the ubiquitous I pervasive computing and networking. The new technologies, collaborative business models, and organizational forms supported by networking tools "invade" all traditional businesses and organizations what requires thinking in terms of whole systems, i. e. seeing each business as part of a wider economic ecosystem and environment. It is also becoming evident that the agile formation of very dynamic virtual organizations depends on the existence of a proper longer-term "embedding" or "nesting" environment (e. g. regional industry cluster), in order to guarantee certain basic requirements such as trust building ("Trusting your partner" is a gradual and long process); common interoperability, ontology, and distributed collaboration infrastructures; agreed business practices (requiring substantial engineering Ire-engineering efforts); a sense of community ("we vs. the others"), and some sense of stability (when is a dynamic state or a stationary state useful). The more frequent situation is the case in which this "nesting" environment is formed by organizations located in a

common region, although geography is not a major facet when cooperation is supported by computer networks.

Virtual and augmented reality raise significant questions for law and policy. When should virtual world activities or augmented reality images count as protected First Amendment 'speech', and when are they instead a nuisance or trespass? When does copying them infringe intellectual property laws? When should a person (or computer) face legal consequences for allegedly harmful virtual acts? The Research Handbook on the Law of Virtual and Augmented Reality addresses these questions and others, drawing upon free speech doctrine, criminal law, issues of data protection and privacy, legal rights for increasingly intelligent avatars, and issues of jurisdiction within virtual and augmented reality worlds.

Conceptual modeling has long been recognized as the primary means to enable software development in information systems and data engineering. Conceptual modeling provides languages, methods and tools to understand and represent the application domain; to elicit, conceptualize and formalize system requirements and user needs; to communicate systems designs to all stakeholders; and to formally verify and validate systems design on high levels of abstraction. Recently, ontologies added an important tool to conceptualize and formalize system specification. The International Conference on Conceptual Modeling - ER - provides the premiere forum for presenting and

discussing current research and applications in which the major emphasis is centered on conceptual modeling. Topics of interest span the entire spectrum of conceptual modeling, including research and practice in areas such as theories of concepts and ontologies underlying conceptual modeling, methods and tools for developing and communicating conceptual models, and techniques for transforming conceptual models into effective implementations. The scientific program of ER 2009 features several activities running in parallel.

Agile Competitors and Virtual Organizations Routledge Information in all its forms is at the heart of the economic intelligence process. It is also a powerful vector of innovation and, more than ever, a balance between economic and societal forces. That is why a large part of *Strategic Intelligence for the Future 2* analyzes the various aspects of information, from traditional processing and research to the psychological and epigenetic aspects of its development. This leads to a new vision of its integration into organizations. In addition, new technologies offer extensive access to information, including social networks which are critically analyzed here. In a complex world where geopolitics and the new concept of information warfare are becoming increasingly important, it becomes imperative to better apprehend and understand our environment, in order to develop critical thinking that will reinforce the different global aspects of security in economic intelligence.

Against this current trend of low growth and high uncertainty, business directors must work with their shareholders to set strategic objectives and define business models. The great number of possible strategies makes this type of management very complex, and the actual deployment of strategic choices is often limited by a lack of overall coherence within the organization. This problem calls for an appropriate and renewed response. In strategic management today, a closer, permanent dialogue is needed between operational and financial performance. Based on a supply chain approach, the Value Added Supply Chain (VASC) model focuses on driving operational performance, but aims to achieve a greater and more dynamic integration between these two dimensions of the company's value creation.

Virtual Business Models: Entrepreneurial Risks and Rewards focuses on companies with technology development, offering inspiration, guidance, and hands-on advice on how to utilize the potential of a virtual company format. The book provides an overview of key aspects of the company's activities, putting them into a comprehensive structure. In addition, both the rewards and risks of using the virtual company format are explored. The virtual company format is here defined as a company with a

small dedicated core staff. The company's development is performed by strategic alliances with external resource providers. In this way, the utilization of financial resources can be optimized with cost-effective product development. The book explores this concept and why it is attractive in a start-up phase for both companies who want to remain virtual and those that eventually want to develop into integrated traditional companies. Provides an overview, and understanding of, a virtual company's key activities Presents tactics that encourage communication between stakeholders associated with the virtual company Allows users to master all details, while managing key strategic issues Covers technology development and its required special skills and competencies
