Shortlisted for the Independent Foreign Fiction Prize 2013. In September 1943, Nazi troops advance on the ancient gates of Gjirokastr, Albania. The very next day, the Germans vanish without a trace. As the townsfolk wonder if they might have dreamt the events of the previous night, rumours circulate of a childhood friendship between a local dignitary and the invading Nazi Colonel, a reunion in the town square and a fateful dinner party that would transform twentieth-century Europe. A captivating novel of resistance in a dictatorship, and steeped in Albanian folklore, The Fall of the Stone City shows Kadare at the height of his powers.

The first historical heroic epic authored by a woman, Scanderbeide recounts the exploits of fifteenth-century Albanian warrior-prince George Scanderbeg and his war of resistance against the Ottoman sultanate. Filled with scenes of intense and suspenseful battles contrasted with romantic episodes, Scanderbeide combines the action and fantasy characteristic of the genre with analysis of its characters' motivations. In selecting a military campaign as her material and epic poetry as her medium, Margherita Sarrocchi (1560?-1617) not only engages in the masculine subjects of political conflict and warfare but also tackles a genre that was, until that point, the sole purview of men. First published posthumously in 1623, Scanderbeide

reemerges here in an adroit English prose translation that maintains the suspense of the original text and gives ample context to its rich cultural implications.

This is an elementary introduction to syntactic analysis. Assuming no prior knowledge of the subject whatsoever, it is intended for students who are encountering such analysis for the first time. For those embarking on a longer term study of syntax, this will be a valuable and quickly assimilated foundation course. For students who will need to use syntax as a basic descriptive tool - such as trainee teachers, speech therapists or students of literacy style - the book provides a framework for their analysis and practice in its use. The book begins by looking at the use of generalizations in describing sentence structure and the basis for word categories. It then moves through increasingly more complex constructions giving students plenty of opportunity by way of practical exercises to understand the basis of each analysis before moving further. The aim of the book is not to explore complex issues of argumentation. Its emphasis is on practical "hands on" analysis.

In the mid-1930s, two Irish Americans travel to the Albanian highlands with an early model of a marvelous invention, the tape recorder. Their mission? To discover how Homer could have composed works as brilliant and as long as The Iliad and The Odyssey without ever putting pen to paper. The answer, they believe, can be found only in Albania, the last remaining habitat of the oral epic. But immediately upon their arrival, the scholars' seemingly arcane research excites suspicion and puts them at the center of ethnic strife in the Balkans. Mistaken for foreign spies, they are placed under surveillance and are dogged by gossip and intrigue. It isn't until a fierce-eyed monk from the Serbian side of the mountains makes his appearance that the scholars glimpse the full political import of their search for the key to the Homeric question.

The author suggests that in this era following the postmodern we have entered a new, monist epoch in which aesthetically mediated belief replaces endless irony as the dominant force in culture. The book documents the "new monism" through an examination of popular films and novels such as American beauty, Life of Pi, and Middlesex as well as in the work of major architects and artists such as Sir Norman Foster, Andreas Gursky, and Vanessa Beecroft. --book cover.

Light and Skin Interactions immerses you in one of the most fascinating application areas of computer graphics: appearance simulation. The book first illuminates the fundamental biophysical processes that affect skin appearance, and reviews seminal related works aimed at applications in life and health sciences. It then examines four exemplary modeling approaches as well as definitive algorithms that can be used to generate realistic images depicting skin appearance. Despite its wide scope of simulation approaches, the book's content is presented in a concise manner, focusing on relevant practical aspects. What's more, these approaches can be successfully applied to a wide range of additional materials, such as eye tissue, hair, and water. Allows you to understand and predict the qualitative and quantitative behavior of complex natural systems A general background on tissue optics clarifies several confusing conceptual issues, saving you valuable time in the early stages of research Includes complete code and data sources for the BioSpec model PHI Learning Pvt.
