Synthesis And Characterization Of Acetaminophen
Abstract. This study

describes the synthesis of acetaminophen is quite easy by new method via diazotization reaction. The prepared compound that is initiated from acetanilide as the first step of the reaction followed by nitration reaction of acetanilide to form p-nitroacetanilide, reduction of the final product to form p-aminoacetanilide, and creating a diazonium salt that is then reacted with solution of (10%, 2.5M) sodium hydroxide. Synthesis and Characterization of Acetaminophen ... Acetaminophen, which can be synthesized from p-aminophenol, is probably best recognized under the trade name Tylenol. The Merck Index, which is an encyclopedia of chemicals, drugs, and biologicals, lists the following information under acetaminophen: large monoclinic prisms from water, mp 169-170.5, very slightly sol in cold water, considerably more soluble in hot water.
