Practicing Forensic Criminology draws on examples from actual court cases and expert witness reports and testimony to demonstrate the merits and uses of substantive criminological knowledge in the applied setting of civil law and the courts. Throughout the book, the authors provide a highly readable, informative discussion of how forensic criminologists can apply

their research and teaching skills to assist judges and juries in rendering legal decisions. Engaging and lively, the chapters include excerpts from forensic criminological investigations, in-depth discussions of the methodological and analytical bases of these investigations, and important lessons learned from real litigation cases. Case examples are drawn from the forensic realms of premises liability, administrative negligence, workplace violence, wrongful conviction litigation, and litigation involving police departments and corrections facilities. Well referenced and thoroughly researched, Practicing Forensic Criminology serves as an introduction to the vast and heterogeneous field of forensic social science that is rapidly changing and expanding. This unique and original book guides readers through the research work of expert witnesses working as consultants, researchers, and crime analysts and investigators. Offering expert criminological insights into litigation cases, the chapters reveal how forensic social

science research can be an effective mechanism for reaching beyond the academy to influence public policy reform and legal proceedings. Practicing Forensic Criminology will appeal to a diverse audience, including social scientists, criminal justice students and researchers, expert witnesses, attorneys, judges, and students of judicial proceedings seeking to understand the value and impact of criminology in the civil court system. Introduces readers to the impact of evidence-based criminological theory and forensic social science investigations in the legal system Demonstrates the usefulness of forensic criminology as a research tool, revealing novel relational dynamics among crime events and the larger socio-spatial context Advances the development of a "translational criminology" - i.e., the translation of knowledge from criminological theory and research to forensic practice - as an expedient to forming robust interactive relationships among criminological social scientists and policy makers

This book arrives at just the right time to facilitate understanding of performance-based fire risk assessment in buildings – an integral part of the global shift in policy away from traditional prescriptive codes. Yung, an internationally recognised expert on the subject of fire risk assessment, introduces the basic principles and techniques that help the reader to understand the various methodologies that are currently in place or being proposed by different organisations. Through his illustration of basic principles and techniques he enables the reader to conduct their own fire risk assessments. He demonstrates how the probabilities of fire scenarios are assessed based on the probabilities of success and failure of fire protection measures that are in place. He also shows how the consequences of fire scenarios are assessed based on the intensity and speed of fire and smoke spread, the probability and speed of occupant response and evacuation, and the effectiveness and speed of fire department

response and rescue efforts. Yung's clear and practical approach to this highly topical subject enables the reader to integrate the various tools available into a quantitative framework that can be used for decision making. He brings an invaluable resource to all those involved in fire engineering and risk assessment, including students, academics, building designers, fire protection engineers, structural engineers, regulators and risk analysts.
