We all are indebted to nature for providing us food and its resources for our subsistence and survival. In the food domain, cereal and legume grains occupy the front line, whereas, horticultural crops have occupied the second line of defense. For healthy diet cereals and legumes provide us with carbohydrates and protein, whereas, fruits and vegetables provide us

minerals and vitamins. Both macro- and micro- nutrients are essential for human growth and development. The fruits and vegetables are the major source of micro-nutrients. It is estimated that up to 2.7 million lives could potentially be saved each year if fruit and vegetable production was sufficiently increased. Both at national and international levels, food and agriculture/horticulture development plans and estimates are basically developed, framed and implemented, and narrowed down to cereal production. In the present context of attaining nutrition security, this mode of thinking on 'food' needs to be changed to 'nutrients', which will include necessarily all those crops including fruit and vegetables which provide all macro- and micro-nutrients to ensure balanced

nutrition needed for good human health. The present publication has attempted to reflect and discuss the above views and ideas on the subject of sustainable horticulture development and nutrition security in nine chapters with 32 articles by 32 authors.

Information Economy Report 2011 John Wiley & Sons

Biological collections are a critical part of the nation's science and innovation infrastructure and a fundamental resource for understanding the natural world. Biological collections underpin basic science discoveries as well as deepen our understanding of many challenges such as global change,

biodiversity loss, sustainable food production, ecosystem conservation, and improving human health and security. They are important resources for education, both in formal training for the science and technology workforce, and in informal learning through schools, citizen science programs, and adult learning. However, the sustainability of biological collections is under threat. Without enhanced strategic leadership and investments in their infrastructure and growth many biological collections could be lost. Biological Collections: Ensuring Critical Research and Education for the 21st Century recommends approaches for biological collections to develop long-term financial sustainability, advance digitization, recruit and support a diverse workforce,

and upgrade and maintain a robust physical infrastructure in order to continue serving science and society. The aim of the report is to stimulate a national discussion regarding the goals and strategies needed to ensure that U.S. biological collections not only thrive but continue to grow throughout the 21st century and beyond.

One of the few monitoring global trends related to information and communication technologies (ICTs) from a development perspective, this publication is a valuable reference for policymakers in developing countries. Special attention is given to ICTs in accelerating private sector development (PSD) in developing countries. Many national and donor strategies related to PSD fail to take adequate account of the ICT potential, which has greatly expanded thanks to changes in the global ICT landscape. Different facets of the ICT-PSD interface are explored, including: ICT infrastructure as a factor in the investment climate; ICT use by the private sector; the ICT sector as a part of

the private sector, and finally, ICT use in interventions aimed at facilitating PSD.
