Prepare for success on certification exams and in perioperative nursing! Alexander's Care of the Patient in Surgery, 16th Edition is the definitive text for nurses and surgical technologists training for a career in the operating room. Illustrated, step-by-step instructions cover patient care in more than 400 surgical interventions, including positioning, instrumentation, and postoperative care. New to this edition is additional coverage of robotic surgery, along with review of evidence-based guidelines for practice. From well-known educator Jane C. Rothrock — and with every chapter authored by an expert nurse — Alexander's gives you the tools you need to provide safe, high-quality care in the surgical setting. Over 400 general and specialty surgical interventions are covered, as well as many minimally invasive surgical procedures, whether performed in a hospital, outpatient clinic, or in a doctor's office. 900 full-color photos and illustrations show surgical anatomy, procedures, and methods. Comprehensive coverage includes basic perioperative nursing principles, such as patient and environmental safety, infection prevention and control, positioning, anesthesia and pain management, the unique needs of special populations such as pediatric and geriatric patients, and more. Comprehensive practice exams on the Evolve companion website include 300 exam-style questions with rationales. Perioperative nursing considerations include assessment, nursing diagnosis, outcome identification, planning, implementation, evaluation, discharge planning, and patient and family education. Sample plans of care include nursing diagnoses, outcomes, and interventions. Surgical Pharmacology tables summarize the drugs most commonly used for each surgical procedure, including generic and trade names, indications, and pharmacokinetics. Patient and Family Education boxes include specific guidelines for preprocedural and postprocedural care, side effects and complications, home care, discharge instructions, and psychosocial care. Patient Safety boxes highlight Joint Commission initiatives for patient and staff safety in the surgical setting. Best Practice and Research Highlight boxes apply the latest scientific research to patient care. Critical thinking questions at the end of each chapter let you assess your understanding of important material. NEW! Robotic-Assisted Surgery boxes highlight a rapidly expanding surgical modality. NEW! Enhanced Recovery After Surgery boxes promote review of protocols for early recovery for patients undergoing major surgery. NEW! Patient Engagement Exemplar boxes optimize surgical

outcomes by addressing AORN guidelines on the issues of patient care and involvement of the patient's family. NEW standards and AORN toolkits cover topics ranging from enhanced post-surgical recovery to prevention of pressure ulcers.

As the #1 title in the pediatric nursing market for over 40 years, Wong's Essentials of Pediatric Nursing, 11th Edition continues to leverage its trademark developmental approach as it equips readers with the very latest research and guidelines for treating children today. The text utilizes a highly-readable writing style and encourages a whole-body approach — beginning with child development and health promotion to better understand the later chapters on specific health problems. This new eleventh edition also features Next Generation NCLEX®-style case studies and questions, a new chapter covering all systems cancers, additional case studies within the nursing care plans, and updated and expanded evidence-based content throughout to best reflect the latest standards and trends impacting pediatric nursing care today. Developmental approach clearly identifies developmental tasks and influences at each stage of a child's growth. Emphasis on wellness features health promotion chapters for each developmental stage of childhood. Critical thinking case studies with answers are found throughout the text. Quality patient outcomes are highlighted within nursing management discussions for major diseases and disorders. Drug alerts draw attention to potential safety issues, reflecting QSEN safety initiative. Family focus includes a separate family chapter as well as family content and Family-Centered Care boxes integrated throughout the text. Community Focus boxes provide resources and guidance on caring for children outside the clinical setting. Evidence-Based Practice boxes focus attention on the application of research and critical thought processes to support and guide the outcomes of nursing care. Chapter on complementary & alternative therapy cover timely topics to aid in providing complete, comprehensive care. Nursing care plans provide a model for planning patient care and include rationales that provide the "why." Research Focus boxes highlight current studies that impact pediatric nursing today. Cultural content and Cultural Considerations boxes are integrated throughout the text to draw attention to customs and beliefs of different cultures that influence childcare. Atraumatic Care boxes contain techniques for care that minimize pain, discomfort, or stress. Nursing tips offer helpful hints and practical, clinical information of a non-emergency nature. Nursing alerts feature critical information that MUST BE considered in providing care. Emergency Treatment sections provide a quick reference in critical situations. Nursing care guidelines provide

clear, step-by-step instructions for performing specific skills or procedures.

Master the role and skills of the medical-surgical nurse in Canada with the book that has it all! Lewis's *Medical-Surgical Nursing in Canada: Assessment and Management of Clinical Problems*, 5th Edition reflects the expertise of nurses from across Canada with evidence-informed guidelines, a focus on clinical trends, and a review of pathophysiology. Clear examples make it easy to understand every concept in nursing care — from health promotion to acute intervention to ambulatory care. An Evolve website includes new case studies to enhance your skills in clinical judgement and prepare you for the Next Generation NCLEX®, CPNRE®, and REx-PNTM. From Canadian educators Jane Tyerman and Shelley L. Cobbett, this comprehensive guide provides a solid foundation in perioperative care as well as nursing care of disorders by body system. Easy-to-understand content is written and reviewed by leading experts in the field, ensuring that information is comprehensive, current, and clinically accurate. More than 800 full-colour illustrations and photographs demonstrate disease processes and related anatomy and physiology. Focus on key areas includes the determinants of health, patient and caregiver teaching, age-related considerations, collaborative care, cultural considerations, nutrition, home care, evidence-informed practice, and patient safety. Nursing Assessment chapters focus on individual body systems and include a brief review of related anatomy and physiology, a discussion of health history and non-invasive physical assessment skills, and note common diagnostic studies, expected results, and related nursing responsibilities. Unfolding case studies in each assessment chapter help you apply important concepts and procedures to real-life patient care. UNIQUE! Levels of Care approach organizes nursing management into three levels: health promotion, acute intervention, and

ambulatory and home care. Nursing Management chapters focus on the pathophysiology, clinical manifestations, laboratory and diagnostic study results, interprofessional care, and nursing management of various diseases and disorders, and are organized to follow the steps of the nursing process (assessment, nursing diagnoses, planning, implementation, and evaluation). Safety Alerts and Drug Alerts highlight important safety issues in patient care. Informatics boxes discuss the importance and use of technology with topics such as use of social media in the context of patient privacy, teaching patients to manage self-care using smartphone apps, and using Smart infusion pumps. Cultural Competence and Health Equity in Nursing Care chapter discusses culture as a determinant of health, especially in regard to Indigenous populations; health equity and health equality issues as they relate to marginalized groups in Canada; and practical suggestions for developing cultural competence in nursing care. More than 60 comprehensive nursing care plans on the Evolve website include defining characteristics, expected outcomes, specific nursing interventions with rationales, evaluation criteria, and collaborative problems.

The transformation in the health care industry, begun over a decade ago, will continue well into the 21st century. And the dominant theme in the new millennium is likely to be collaborative practice and outcome s-based health care delivery. A collection of the most current and innovative presentations in path-based, collaborative practices, this book focuses on the design, implementation and analysis of outcomes for the heavy volume DRGs. For each DRG, the authors present two to three standard clinical pathways, and then show how those pathways can be manipulated to alter outcomes. Health Care Outcomes covers topics in Respiratory, Neonatal/Pediatric, General Surgery, Orthopaedic, and Geriatric Care. A comprehensive collection of critical pathways and outcomes maps being used by leading hospitals and health care agencies around the country, this is an important reference for developing path-based care models, or revising critical paths and outcomes maps.

This first-of-its-kind text provides a multidisciplinary overview of a significant problem in hospital-based healthcare: patients who decline inpatient medical care and leave the hospital against medical advice (AMA). Compared to standard hospital discharges, AMA discharges are associated with worse health and health services outcomes. Patients discharged AMA have been found to have disproportionately higher rates of substance use, psychiatric illness, and report stigmatization and reduced access to care. By providing a far reaching examination of AMA discharges for a wide academic and clinical audience, the book serves as a reference for clinical care, research, and the development of professional guidelines and institutional policy. The book provides both a broad overview of AMA discharges with chapters on the epidemiology, ethical and legal aspects, as well as social science perspectives. For clinicians in the disciplines of hospital medicine, pediatrics, emergency medicine, nursing, and psychiatry, the book also provides a patient-centered analysis of the problem, case-based discussions, and a discussion of best practices. This comprehensive review of AMA discharges and health care quality will interest physicians and other health care professionals, social workers, hospital administrators, quality and risk managers, clinician-educators, and health services researchers.

Since more and more surgeries and procedures are being performed in outpatient settings, the policies, plans, and procedures for these services are of increasing importance. 50 Policies and Plans for Outpatient Services details commonly used policies and plans in free-standing ambulatory care centers. Included are plans and policies concentrating on emergency management, medication safety, informed consent, and medical staff credentialing to name a few. As an introduction to the model documents presented, the book begins with a how-to chapter to guide readers through the process of formatting the documents and making them their own. The policies and plans discussed serve as templates and can apply to licensing and regulatory agencies such as Medicare, the Joint Commission, and AAAHC. The documents included in this book are excellent templates to use as a starting point for producing policies and plans that help create the flow and process in an organization. Knowing their specific local, state, and other governing agency requirements, readers can customize the documents to reflect the unique structure and qualities of their organization through the use of the enclosed CD. The resulting policies, procedures, and plans are the back-up documents that provide rationale, vision, and theory, and can be valuable tools for making effective clinical and administrative decisions. In addition to the documents provided on the CD-ROM, the book also includes a list of helpful resources.

"Nurses play a vital role in improving the safety and quality of patient care -- not only in the hospital or ambulatory treatment facility, but also of community-based care and the care performed by family members. Nurses need know what proven techniques and interventions they can use to enhance patient outcomes. To address this need, the Agency for Healthcare Research and Quality (AHRQ), with additional funding from the Robert Wood Johnson Foundation, has prepared this comprehensive, 1,400-page, handbook for nurses on patient safety and quality -- Patient Safety and Quality: An Evidence-Based Handbook for Nurses. (AHRQ Publication No. 08-0043)." - online AHRQ blurb, <http://www.ahrq.gov/qual/nursesfdbk/>

Purpose: Over 22 million elective surgeries are performed in the U.S. every year. Improvements in technology and advancements in medicine have enabled more surgeries to become ?ambulatory? or

?outpatient? surgical procedures. Ambulatory surgical procedures are defined as those in which a patient is discharged from the facility the same day as the procedure. The advancements in healthcare have also led to healthcare workings spending less time with patients. The decrease in the time spent with a patient during the perioperative experience can result in communication problems or feelings of unpreparedness regarding the surgical procedure. Effective communication is essential for a satisfactory surgical experience. The purpose of this prospective descriptive study is to examine the concerns of patients undergoing elective surgical procedures, how the concerns are being addressed, and the extent to which the concerns are relieved. Materials and Methods: One hundred sixty seven participants that were undergoing elective outpatient surgical procedures between March 2014 and June 2014 at Butterworth Hospital, Blodgett Hospital and Lake Drive Surgical Center were enrolled in this study. Participants were called prior to their surgical procedure and within seven days following their surgical procedure. During the phone calls, participants were asked to give demographic data as well as their ?Most Important Concern? (MIC) prior to the surgical procedure, their MIC on the day of surgery, and how well how healthcare workers addressed and alleviated those concerns. The Pre-Procedure Planning (PPP) Research team at Spectrum Health developed a survey instrument titled ?Most Important Concerns Questionnaire?. The survey questions included 5two that used a ?yes?/ ?no?/ ?prefer not to answer? response format, two that had an open-ended question format, and two that were scored using a Likert-Style 4-point scale. Results: Of the one hundred sixty-seven participants enrolled in the study, some reported more than one MIC; there were a total of 209 concerns reported. The five most common pre-procedure MIC's consisted of the following in order of highest to lowest frequency: successful outcome of surgery (18.18%), anesthesia concerns or concerns about waking up during surgery (16.75%), fear of complications (13.40%), return to work or previous level of activity (12.82%), and free of pain (12.44%). Of the 167 participants, 154 participants reported MICs in the top five categories. Of the day of surgery concerns reported, the most frequent MIC was concern about nausea or vomiting (23.53%). This was followed by fear of complications and anesthesia concerns or concerns about waking up during surgery, in which each were reported by a total of three participants (17.65%). The majority of participants (67.7%) felt that their pre-procedure MIC was adequately addressed and 100% of participants felt that the day of surgery MIC was adequately addressed. Data was analyzed using statistical analysis software (SAS) version 9.4 with de-identified data on an encrypted flash-drive. Gender, race and age did not have a significant impact on the pre-procedure MIC categories. Chi-Square Test, Fisher's Exact Test, and Monte Carlo Estimations were used to check for statistical significance of patient race, age, and gender. Conclusion: This study found that the majority of the five most common pre-procedure MICs were addressed and relieved by the surgical team. Gender, race, and age were not significant variables in the addressing of MICs.

Smith's Textbook of Endourology Springer

Thoroughly updated for its Second Edition, this pediatric procedures book provides the student and professional nurse with a quick reference to essential nursing procedures and standards for practice. Endourology is a dynamic subspecialty involving closed, controlled manipulation within the genitourinary tract. In the past decade the creative efforts of many urologists, radiologists, and engineers have vastly expanded endoscopic technique, to the great benefit of patients with stones, obstruction, cancer, diverticula, cysts, adrenal disease, varices, and diseases of the bladder. This definitive text addresses every aspect of endourologic procedure including methods of access, operative techniques, complications, and postoperative care. The reader is taken, step-by-step, through cutaneous surgery, ureteroscopy, extracorporeal shock wave lithotripsy, laparoscopy, and lower urinary tract procedures. The principles and function of state-of-the-art endourologic instruments are outlined for each procedure. The authorship reads like a Who's Who in endourology. The breadth and depth of their experience is evident throughout the text.

Discharge instructions were originally created to alleviate the burden of transitioning from inpatient hospitalization to outpatient care. The US healthcare model's evolution throughout the 20th and 21st centuries has firmly distinguished inpatient providers from outpatient providers, with little continuity between them. As a patient leaves inpatient care there is an increasing need for clear discharge instructions to help navigate complex diseases and care regimens. However, comprehension of discharge instructions, both oral and written, is a major obstacle for many populations, with certain demographics especially affected. Populations with limited English proficiency (LEP), for example, are commonly provided discharge instructions in English, preventing them from fully engaging in their care and from understanding information that is paramount to a smooth transition to outpatient settings. Many factors contribute to the failure to provide this and other care in LEP patients' primary languages. Factors include but are not limited to: misinformation regarding price of interpreter services and time necessary to use these services, biases against LEP populations, and ignorance regarding the effect this has on the LEP population. This paper discusses the background of discharge instructions, reasons for development, the price LEP patients pay when we fail to provide care in their primary language, and possible reasons why we fail to provide that care.

Office-Based Gynecologic Surgical Procedures Elsevier Health Sciences

Recent trends in medicine have pushed many gynecologic procedures to the outpatient setting, whether in-office, in small medical ambulatory surgery centers, or in procedure rooms. *Office-Based Gynecologic Surgical Procedures* covers both basic and advanced procedures, from biopsy and saline ultrasound to cystoscopy. It answers the "How?", "What?", and "When?" of setting up, preparing for, and confidently performing office procedures. While appropriate training and certification in these procedures such as cystoscopy and hysteroscopy is needed, this book is an excellent resource for advice and tips on how to safely transition from the technique used in the operating room. It also provides the necessary algorithms and in-depth instructions pertinent to performing these types of procedures effectively in the office setting. A chapter on patient safety in the office is also included. *Office-Based Gynecologic Surgical Procedures* is ideal for established OBGYNs in practice who want to expand their range of procedures offered in-office, fellows in Women's Health, advanced nurse practitioners, recent OBGYN residency graduates, and family

medicine physicians eager to familiarize themselves with women's health procedures.
