The Algebra of Mohammed Ben Musa Longman International Education Division (a Pearson Education Company)

In a novel approach to the field of Islamic politics, this provocative new study compares the evolution of Islamic populism in Indonesia, the country with the largest Muslim population in the world, to the Middle East. Utilising approaches from historical sociology and political economy, Vedi R. Hadiz argues that competing strands of Islamic politics can be understood as the product of contemporary struggles over power, material resources and the result of conflict across a variety of social and historical contexts. Drawing from detailed case studies across the Middle East and Southeast Asia, the book engages with broader theoretical questions about political change in the context of socio-economic transformations and presents an innovative, comparative framework to shed new light on the diverse trajectories of Islamic politics in the modern world.

Translated from the original Arabic by William Alexander Greenhill.

Phonics Tricks Science in Medieval Islam An Illustrated Introduction

How can people belong simultaneously to two cultures, originating in two different places and expressed in two different languages, without alienating themselves from either? Muslims have lived in the Chinese culture area for 1400 years, and the intellectuals among them have long wrestled with this problem. Unlike Persian, Turkish, Urdu, or Malay, the Chinese language never adopted vocabulary from Arabic to enable a precise understanding of Islam's religious and philosophical foundations. Islam thus had to be translated into Chinese, which lacks words and arguments to justify monotheism, exclusivity, and other features of this Middle Eastern religion. Even in the 21st century, Muslims who are culturally Chinese must still justify their devotion to a single God, avoidance of pork, and their communities' distinctiveness, among other things, to sceptical non-Muslim neighbours and an increasingly intrusive state. The essays in this collection narrate the continuing translations and adaptations of Islam and Muslims in Chinese culture and society through the writings of Sino-Muslim intellectuals. Progressing chronologically and interlocking thematically, they help the reader develop a coherent understanding of the intellectual issues at stake.

Held by the Near Eastern History Group at Oxford, June 26-30, 1967.

Islam and the Trade of Asia Brill Academic Pub

This vivid and detailed biography strips away centuries of distortion and myth and presents a balanced view of the man whose religion continues to dramatically affect the course of history.

Principles of Physics Harper Collins

Discussion of what we can do to perfect our faith; as we mature in our faith, what must we do in order for faith to become perfected? This book attempts to answer these questions, and talks about not only faith from a religious perspective, but how we live our everyday lives.

Muhammad Bantam

A deliciously potent tale of one woman's quest for self-discovery. Rowan Cassidy likes to be in charge—especially in her personal life. As a mistress at Club Privé, the most exclusive bondage/S & M club on the West Coast, Rowan can live out her dominant fantasies safely, and with complete control—until the night Christian Thorne walks in. Self-confident and sophisticated, he's a natural dominant if Rowan's ever seen one. Yet she can't stop thinking about him and imagining his touch.

Christian has returned home, hoping to break free from his dissatisfaction and malaise—and discovers the cure in Rowan. He's dying to get his skilled hands on her and watch her surrender, to unlock the mystery of her that captivates him. Determined to be her master, he makes Rowan a daring proposition: give herself over to him for thirty days. Rowan finds Christian's offer terrifying—and impossible to resist. But abandoning herself to Christian's power might be more than she can handle. . . . Or it might be the realization of her true nature and the dark garden within her. There will be only one way to find out. And once the game has begun, there's no turning back.

Normative Piety and Mysticism in the Sultanate of Yogyakarta Anniversary Collection

Al-Isharat wal-Tanbihat (Remarks and Admonitions) is one of the most mature and comprehensive philosophical works by Ibn Sina (Avicenna, 980–1037). Grounded in an exploration of logic (which Ibn Sina described as the gate to knowledge) and happiness (the ultimate human goal), the text illuminates the divine, the human being, and the nature of things through a wide-ranging discussion of topics. The sections of Physics and Metaphysics deal with the nature of bodies and souls as well as existence, creation, and knowledge. Especially important are Ibn Sina's views of God's knowledge of particulars, which generated much controversy in medieval Islamic and Christian philosophical and theological circles and provoked a strong rejection by eleventh-century philosopher al-Ghazali. This book provides the first annotated English translation of Physics and Metaphysics and edits the original Arabic text on which the translation is based. It begins with a detailed analysis of the text, followed by a translation of the three classes or groups of ideas in the Physics (On the Substance of Bodies, On the Directions and Their Primary and Secondary Bodies, and On the Terrestrial and Celestial Souls) and the four in the Metaphysics (On Existence and Its Causes, Creation Ex Nihilo and Immediate Creation, On Ends, on Their Principles, and on the Arrangement [of Existence]), and On Abstraction. The Metaphysics closes with a significant discussion of the concepts of providence, good, and evil, which Ibn Sina uses to introduce a theodicy. Researchers, faculty, and students in philosophy, theology, religion, and intellectual history will find in this work a useful and necessary source for understanding Ibn Sina's philosophical thought and, more generally, the medieval Islamic and Christian study of nature, the world beyond, psychology, God, and the concept of evil.

The Dark Garden Assn for Asian Studies Incorporated

During the Golden Age of Islam (seventh through seventeenth centuries A.D.), Muslim philosophers and poets, artists and scientists, princes and laborers created a unique culture that has influenced societies on every continent. This book offers a fully illustrated, highly accessible introduction to an important aspect of that culture—the scientific achievements of medieval Islam. Howard Turner opens with a historical overview of the spread of Islamic civilization from the Arabian peninsula eastward to India and westward across northern Africa into Spain. He describes how a passion for knowledge led the Muslims during their centuries of empire-building to assimilate and expand the scientific knowledge of older cultures, including those of Greece, India, and China. He explores medieval Islamic accomplishments in cosmology, mathematics, astronomy, astrology, geography, medicine, natural sciences, alchemy, and optics. He also indicates the ways in which Muslim scientific achievement influenced the advance of science in the Western world from the Renaissance to the modern era. This survey of historic Muslim scientific achievements offers students and general readers a window into one of the world's great cultures, one which is experiencing a remarkable resurgence as a religious, political, and social force in our own time.
